REPORT OF THE SECRETARY OF STATE.

OFFICE OF THE SECRETARY OF STATE,

COLUMBUS, O., *January 1, 1881.*

To His Excellency, CHARLES FOSTER, Governor of Ohio:

SIR: In compliance with the requirements of the Constitution and laws of the State, I have the honor herewith to submit the annual report of this department for the year ending with the 15th day of November, 1880.

CORPORATIONS.

During the year there have been filed in this office five hundred and forty-four certificates of incorporation. Of these, one hundred and sixty-two were for the incorporation of manufacturing companies; twenty-seven, mining companies; fourteen, mining and manufacturing companies; thirty-five, railroad companies; fifty-six, building and loan associations; six, street railroad companies; eleven, printing and publishing companies; two, gas companies; forty-one, co-operative fire and life-insurance companies; seven, co-operative trade associations; eighty-one, churches, societies, and benevolent associations; sixteen, college and literary societies; one, fire-insurance company; one, plank-road company; nineteen, telegraph and telephone companies; thirteen, cemetery associations; two, for hunting, fishing, etc.; three, water-works companies; two, stock-yard companies; twelve, for building hotels, halls, tenement houses, etc.; fifteen, mercantile associations; two, river and lake transportation companies; two, soldiers' monumental associations; five, musical associations; two, detective companies; two, ice companies; one, hedge company; two, agricultural societies; one, Gatling gun battery; one, dock company, and one baseball association. In addition to the foregoing, several certificates have been filed for changing name of corporation, increase and decrease of capital stock, changing time of meeting, extension of lines of railroad, etc. General tabular and classified statements are prepared, and will be embodied in the forthcoming volume for publication.

MUNICIPAL CORPORATIONS.

During the year five villages have been incorporated, territory has been annexed to ten, and two hamlets have been advanced from hamlets to villages. A table with the names of each and dates, etc., will appear in the published report.

PUBLICATION OF SUPREME COURT REPORTS.

As required by the joint resolution of the General Assembly, adopted April 15, 1880, on the 16th day of June, after giving four weeks' notice, as required therein, I proceeded to open proposals for publishing the Supreme Court reports. The following were submitted:

Robert Clark & Co. proposed—

1st. To furnish the State free of charge 180 copies of each signature, as provided by law.

2d. To furnish the State 350 copies, bound, each, at \$1.25 per volume.

3d. To supply the demand of the citizens of the State, as required by law, at a cost of not to exceed \$2.50 per volume.

Peter G. Thompson proposed—

1st. To deliver to the State 180 copies of the advance sheets, free of charge.

2d. To furnish the State 380 copies, each, bound, at \$1.65 per volume.

3d. To supply the demand of the citizens of the State at \$1.65 per volume.

H. W. Derby proposed—

1st. To furnish 180 copies of the advance sheets, and 350 copies, bound, each, free of charge, to the State, and—

2d. To furnish to the citizens of the State, on demand, at \$1.35 per volume.

The proposition of H. W. Derby, being the lowest responsible bidder therefor, and his bond being approved by the Governor, as required by law, I awarded the contract therefor to him, and his written agreement and bond are accordingly on file in this office.

DISPOSITION OF SUPREME COURT REPORTS.

During the year I have delivered to the clerks of the courts of several counties, to supply missing sets and parts of sets, and to the Supreme Court, Supreme Court reports as follows:

To the Clerk of the Court of Hancock county, 3 volumes O. R. and

15 volumes O. S. R. To the members of the late Supreme Court Commission, 5 volumes each title. To the Clerk Meigs county, 4 volumes O. R. and 2 volumes O. S. R. To the Clerk Sandusky county, 4 volumes O. R. and 5 volumes O. S. R. To the Clerk Henry county, one full set, each title, except 2 volumes. To the Clerk Hamilton county, 5 volumes O. S. R. To the Clerk Supreme Court, 1 volume O. S. R. To Meigs county, 2 volumes O. R. and 1 volume O. S. R. To the Clerk of Crawford county, 2 volumes O. R. To the Law Librarian, 10 copies O. S. R. for use of Supreme Court. To the Clerk Highland county, 1 volume O. S. R. To the Clerk Putnam county, 1 volume O. S. R. To the Clerk Jefferson county, 5 volumes O. R. and 7 volumes O. S. R. To the Clerk Portage county, 2 volumes O. S. R. To the Clerk Wood county, 1 set each title, and to the Auditor of State, 2 sets each title.

SUPREME COURT REPORTS EXCHANGED.

On the 27th of April, 1880, the Supreme Court entered upon its Journal the following order :

"The Secretary of State of the State of Ohio, under section 434, of the revised statutes, is hereby directed, after receiving the number of copies of the first edition of any Supreme Court reports necessary for the distribution authorized by law, and a sufficiency, in addition, to supply the probable demand for actual use in this State, that, of the residue thereof, he make exchanges with other States and Territories of the United States, for the use of the State law library, for the reports of the courts of last resort, of such other States and Territories, until the State law library shall be supplied with full and complete sets of all such reports from other States and Territories, and that this direction shall continue in force until otherwise ordered."

This order, so far as practicable, has been complied with, and the expense of sending the same by mail and express, which has been very considerable, has been paid out of the contingent fund of this office.

REVISED STATUTES.

During the fiscal year I received the following number of copies of the revised statutes from the State Bindery: Vol. 1, 11,875; vol. 2, 11,900. From H. W. Derby, by purchase, under Senate joint resolution, adopted April 7, 1880, vol. 1, 775; vol. 2, 775. Total, 25,325 copies. Distributed to county auditors, as directed by law, for county and township officers, vol. 1, 5989; vol. 2, 5989 copies. Surplus for sale by them, vol. 1, 4879; vol. 2, 4879 copies. To the Governor, vol. 1, 100; vol. 2,

100 copies. To the State Library, vol. 1, 50; vol. 2, 50 copies. To the state officers, county officers, members and officers of the 63d and 64th General Assemblies, and sold at the office to private parties, vol. 1, 336; vol. 2, 367 copies. On hand November 15, 1880, vol. 1, 1333; vol. 2, 1223 copies. Total, 25,325 copies.

Received on account of sales and turned into the State treasury up to November 15, 1880: From county auditors, \$4,806.70; from sales at the office, \$407.50; total amount received and paid into the State treasury, \$5,214.20.*

CONTRACTS FOR PAPER FOR THE STATE.

In pursuance of the provisions of sections 122, 133, 134, 135 and 136 of the revised statutes, after having given due notice by advertisement as therein required, for bids for the several kinds of paper for the State for the ensuing year, on the 6th day of September, 1880, the several bids were opened, and it appearing that H. W. Derby & Co. were the lowest and best bidders therefor, and their bond being duly approved, I awarded the contract to them as provided by law, as follows: Double super-royal, 13 cents per pound; double flat-cap, 19 cents per pound; brochure cover, 15 cents per pound; flat-cap, 19 cents per pound; flat-letter, 20 cents per pound; folio-post, 19 cents per pound; demy, 25 cents per pound.

STATIONERY.

A table showing the purchase and disposition of stationery for the year is prepared and will be printed in the report.

OFFICIAL ROSTER.

A complete roster of all the state and county officers and of the various public institutions of the State is also prepared, and will be given in the printed report.

FEES AND PERQUISITES.

The only statutory provisions prescribing fees in the office of Secretary of State, prior to the adoption of the Revised Statutes, were section 4, of the act of February 26, 1846, prescribing fees for certain land records (S. & C., page 1390); section 4 of the act of February 10, 1857, (S. & C., page 477), prescribing a fee of one dollar for a copy of a deed,

* "From November 15, 1880, to January 10, 1881, the close of my official term, the amount received from sale of revised statutes, was \$8,369.95. Total amount received by me from such sales, \$13,584.15. Receipts for which, from Treasurer of State, are on file in this office."

MILTON BARNES.

and section 2 of the act of April 12, 1876, (O. L., 72, page 337), authorizing a fee of five dollars for proving gas-meters. The first two sections referred to, were rendered inapplicable to the Secretary of State by the act of May 7, 1877, (O. L., vol. 74, page 217), which transferred all the land records in this office to the office of the Auditor of State, shortly after the beginning of my first term. No services under the acts in relation to gas-meter provers having been performed during my term, no fees therefor have been received from that source. Prior to the Revised Statutes, which took effect January 1, 1880, there never had been any fees fixed, or prescribed by law, but it has been the uniform practice, for more than thirty years, in this department, for the Secretary of State to charge, as a part of his compensation, a reasonable sum for such services performed for individuals, not specially required by law to be performed, and for which services no fees were prescribed by law.

The act of May 1, 1852, providing for the creation and regulation of incorporated companies, provided that in order to incorporate a company, five or more persons should sign and acknowledge a certificate setting forth certain facts, and file the same with the Secretary of State, and a certified copy of such certificate, under the great seal of the State, should be evidence of the existence of such corporation. When called upon for such a certified copy, it became, and has ever since continued to be, the custom to charge a reasonable fee therefor, and retain the same. In the general appropriation act of April 16, 1870, (O. L., vol. 67, page 54), a clause was inserted requiring the Secretary of State to pay into the State treasury "all fees received by law for official services in said office." On the 15th day of July, 1871, Hon. I. R. Sherwood, then Secretary of State, asked the opinion of Hon. F. B. Pond, then Attorney-General, for his construction of that provision in the appropriation act, aforesaid, who gave his written opinion to the effect, that the provision aforesaid was temporary, and the clause relating to fees was intended by the General Assembly to limit this temporary appropriation, and, of necessity, must be temporary itself; and that said act would in no way affect such fees beyond the term for which such appropriation was made (which was for only one year).

This construction of the law referred to by General Pond, was subsequently observed by Secretary Sherwood and his successors in office, and the practice of charging and retaining the fees continued by them.

The reasonableness of this construction would seem to be so apparent as to need no citation of authorities to support it; but, if it should be called in question, I respectfully refer to the following cases and the ruling of the courts therein, viz.:

"The United States *vs.* Leonard Jarvis"—determined in the District Court of the United States, for the District of Maine (Davis' reports, vol. 1, page 274), in which this identical question was determined. In this case, the syllabus is as follows: "In the construction of temporary statutes, as annual appropriation acts, the presumption is, that any special provisions of a general character, contained in such acts, are intended to be restricted in their operation to the subject-matter of the act, and they are not to be construed to be permanent regulations, unless the intention of making them so is clearly expressed." In the body of the decision in this case the Judge remarks that, "the act itself is one of those annual acts which spend their power in the course of the year, to which we are not accustomed to look for permanent regulations. If the Legislature annex to such an act, any special provision, which has a proper application to the subject-matter of the act, and use no words indicating an intention to give it a more extensive operation, the just conclusion would seem to be, that the special regulation was intended to be confined to the matters embraced by the act." The Judge goes on to say: "It is also remarked by Mr. Justice Story, in delivering the opinion of the court, in '*Minis vs. the United States*,' (15 Peters' R., p. 445, to which reference is made) that, 'it would be somewhat unusual to find engrafted on an act making special and temporary appropriations, any provision which was to have a general and permanent application to all future appropriations. Nor ought such an intention on the part of the Legislature to be presumed, unless it is expressed in the most clear and positive terms, and where the language admits of no other reasonable interpretation.' "This is emphatic language," says the Judge, "and places this, as a rule of interpretation, on *strong ground*."

Secretary Sherwood, in his annual report for 1872, makes the very proper distinction between "fees received by law" and "*fees by custom*." The former, he says, he applied to the payment of clerk-hire, under the acts of 1846 and 1857, herein referred to. The latter, he says, he *retained*, and called the attention of the General Assembly to the fact, and suggested that if the General Assembly were of the opinion that \$2,000 per annum was all the compensation that the Secretary of State was entitled to, he would, if so directed, turn them into the treasury. To this important official communication made to that body, there was no response. And so, the practice of retaining these fees has continued, and they have always been considered and treated as a part of the compensation of that officer.

When the salaries of the several executive officers of the State were increased, by the act of February 8, 1865, this fact was well known and

was publicly discussed by that General Assembly, and while the compensation of the Auditor and Treasurer of State was increased to \$3,000 each, that of Secretary of State was fixed at \$2,000 only, because he was receiving these fees, and for the economic reason, that it would be a saving to the State for him to derive a part of his compensation from corporations, instead of drawing it all from the treasury.

In this connection it may be observed, that it has been the custom, for the last ten years or more, to pay, by legislative appropriation, annually, the sum of \$2,000 for the services of chief clerk in this department, which is but a reasonable compensation, although he is not under bond and his duties are only clerical. Can it be, therefore, that the Secretary of State, who is charged with the entire responsibility of one of the most important executive departments of the State, is intended to receive only the same compensation as his chief clerk, who is charged with no official responsibility whatever? This presents an anomaly difficult to explain upon any other ground than the one I am claiming.

I am safe, also, in saying, that for many years no person has sought, or occupied this office, but whose understanding has been that the fees referred to were considered as constituting a legitimate part of his official compensation.

In the light of all these facts, it is but reasonable to conclude that the long-continued practice of this department, in that behalf, with the knowledge and acquiescence therein by the Legislature and the public, gives it all the force and effect of established law.

And so the courts, in such cases, have uniformly held. In the case of *Rogers vs. Goodwin*, (17 Mass., page 477), in giving a construction to the practice of a department long acquiesced in, the court says, "We cannot shake a principle which in practice has so long and so extensively prevailed. If the practice *originated in error*, yet the error is now so common that it must have the *force of law*. The legal ground on which this principle is now supported, is, that long and continued usage furnishes a contemporaneous construction which must prevail over the *technical import of the words*." So, also, the Supreme Court of the United States, in *Stewart vs. Laird*, (1 Cranch, page 269), held "that a practice and acquiescence therein, for a period of several years, afforded an irresistible answer to all objections and fixed the construction—a cotemporary interpretation of the most forcible nature—a practical exposition too strong and obstinate to be shaken or controverted," and cites numerous cases of the same import.

The provision in section 14, Revised Statutes, which, prior to their adoption, applied only to the Auditor of State, is therein made to apply to all State officers, and requires them to pay all fees received by them into the treasury, etc., with the exception, "unless otherwise herein provided." Section 148 provides that the Secretary of State *shall be entitled to receive* the following fees, etc., and makes no other direction as to their disposition, thus leaving it to be inferred that this section may properly be considered as coming within the provision of the *exceptions* named in section 14. This view is strengthened by the fact that sections 164 and 165 prescribe *similar fees for similar services* by the Auditor of State. They provide that the Auditor, when "satisfied that the same are required," etc., "shall, *on demand* and the tender of the proper fees, furnish copies," etc., "and that the parties applying therefor *shall pay them*," while the other simply provides that the Secretary of State "shall be *entitled to receive*," etc., leaving it discretionary with that officer to collect them or not. So, also, section 282 provides that "there shall be paid by every insurance company," etc., to the superintendent of insurance the following fees, describing them, all of which fees *shall be paid* by the superintendent *into the treasury*.

The statute itself, therefore, by these contemporaneous provisions, seems to furnish the best rule for the construction of section 148. If the legislature had intended the fees therein prescribed to be a part of the public revenue, it would undoubtedly have made it obligatory upon the parties receiving the service to pay the same, and upon the officer to collect and turn them into the treasury.

With respect to section 148, aforesaid, it is hardly reasonable to presume that the 63d General Assembly thereby intended to reduce the compensation of the Secretary of State, while, by the same act (the Revised Statutes), it largely increased the duties and responsibilities of his office.

But, whatever construction, technical or otherwise, may be given to these ambiguous sections, it is clear that in the light of the facts herein given and the authorities cited, section 14 can have no application to myself, it having taken effect during my present term of office. Since, in that respect, it would be in direct contravention of Section 19, Article III of the Constitution, which provides, that the *compensation* of such officers shall neither be increased nor diminished during the period for which they shall have been elected.

ACKNOWLEDGMENTS.

In closing this report, which will be the last of my official reports as Secretary of State, my sincere acknowledgments are due to the several

assistants whose faithful and efficient services have been conspicuous throughout my term. In this behalf, I desire especially to mention Capt. Alexis Cope, Chief Clerk; W. M. Cunningham, Statistical Clerk, and compiler of "Ohio Statistics"; C. H. Ostrander, Stationery Clerk; Frank P. Barnes, Corporation Clerk, who have been associated with me in the office for the whole of my two terms, and more recently, S. C. Harbaugh and Major J. K. Brown, Miscellaneous Clerks, all of whom, by their efficiency and faithful discharge of duty, have won my sincere regard; and I moreover wish to commend them to the public as in every way worthy of the highest respect and confidence.

I am, very respectfully,

Your obedient servant,

MILTON BARNES,

Secretary of State.

OHIO PIONEER HISTORY.

THE MILITARY EXPEDITIONS OF THE NORTH WEST TERRITORY.

By ISAAC SMUCKER.

GENERAL HARMAR'S EXPEDITION

AGAINST THE

INDIANS OF THE NORTH-WEST IN 1790.

The military expedition of General Harmar, in 1790, against the hostile Indians in the north-west, was the first one organized after civil government was established in the "territory north-west of the river Ohio." Gen. Harmar, who was appointed the previous year, was at that time Commander-in-Chief of the western military department. The relations between the Indian tribes north-west of the Ohio river, and the frontier settlers, were those simply of intensified hostility. The Indians had undoubtedly assumed their threatening attitude towards the western frontiers-men through the instigation of the British agents in the north-west—notably of Alexander McKee and Matthew Elliott. And the infamous renegade, Simon Girty, was conspicuously pre-eminent, in rendering such services, as he could, favorable to the interests of England, and which would be as detrimental as possible to the north-west, and to Kentucky, to whose settlement by the white race he determined to interpose all possible obstacles. It may be premised, however, that Girty's movements in this direction were dictated more by his ingrained and long-cherished hatred of the western pioneers, than by any affectionate regard he had for British interests.

During the two preceding years (1788-9), and during the early spring of 1790, there had been a strong tide of emigration setting in towards Kentucky and the north-west. Most of the adventurous emigrants descended the Ohio river in flat-bottomed or emigrant boats, but this method of reaching their destination had been latterly rendered exceedingly hazardous by straggling parties of hostile savages who were carrying on a predatory war against the new settlements along the north-western bank of the Ohio, and made frequent and sometimes successful attacks upon the emigrant boats, and inflicting terrible barbarities upon their captives. Gen. Wilkinson, under date of April 7, 1790, addressed some stirring words to Gen. Harmar, "in the interest of humanity and Kentucky," on the perils of emigrants moving on

boats down the Ohio. He stated "that for more than a month past, a party of savages had occupied the north-western bank of the river, a few miles above the mouth of the Scioto, from whence they made attacks upon every boat that passed, to the destruction of much property, the loss of many lives, and the great annoyance of all intercourse to the north-westward. By very recent accounts we are apprised that they still continue in force at that point, and that their last attack was made against five boats, one of which they captured. It is the general, and, I believe, well founded opinion, that if this party is not dislodged and dispersed the navigation of the Ohio must cease."

Such being the state of affairs, Kentucky at once raised and rendezvoused at Limestone, now Maysville, a force of two hundred and thirty volunteers, under the command of Gen. Charles Scott, who was soon joined by Gen. Harmar with one hundred regular troops. The entire command marched to the Scioto, April 18th, but the Indians having heard of their approach, dispersed, and only four of them were killed. The expedition, however, was not without other results, as it secured a tolerably safe navigation of the Ohio for some time. But as this immunity from attack was only temporary, another expedition against the savages was projected during the summer, by Governor St. Clair, which was placed under the command of Gen. Harmar, the Indian town at the junction of the St. Joseph's and St. Mary's, now Fort Wayne, Indiana, being the objective point. This measure was decided upon because of the necessity of permanently humbling, and 'severely chastising some of the insolent and brutal savage tribes, whose depredations and barbarities had become intolerable, and whose cruelties had become an outrage, not only upon the people of the West but on humanity itself."

The army of Gen. Harmar was organized at Fort Washington (Cincinnati), and consisted of three battalions of Kentucky militia, one battalion of Pennsylvania militia, one battalion of Kentucky mounted riflemen, in all numbering eleven hundred and thirty-three men. To these were added two battalions of regulars, amounting to three hundred and twenty men. The total force of the expedition, therefore, consisted of fourteen hundred and fifty-three men. The Kentucky troops were commanded by Col Trotter; those of Pennsylvania by Col. John Hardin; the regulars by Majors Wyllys and Doughty; a small artillery company with three pieces of ordnance by Captain Ferguson, and the Kentucky mounted troops by Major Fontaine, the whole force, regulars, artillerymen, militia, and mounted men being subject to the orders of the Commander-in-Chief, Gen. Harmar.

On the 26th of September the advance movement was made by a portion of Gen. Harmar's army, from "Fort Washington", followed by the remainder on the 30th, and on the 3d and 4th days of October. Except the regulars, the army was composed, to a large extent, of boys and old, infirm men, many of them almost wholly undisciplined, and badly armed and equipped. Moreover, there was an aversion on the part of the militia to co-operate harmoniously with the regulars. And in addition, a feud had grown up between Colonels Hardin and Trotter, and their respective adherents among the militia, as to the question of rank. Col. Hardin was the senior, and properly the ranking officer, but the great body of the Kentucky militia insisted upon being commanded by Col. Trotter. The acrimonious feeling that grew out of this rivalry foreboded evil, and there was really not much reason to believe, from the day the expedition left "Fort Washington" until its return, that any considerable success would attend it, and the public expectation was realized—it was essentially a fruitless campaign—at least, the sacrifices of the campaign were out of all proportion to the beneficial results.

On the 14th of October (the army being within two days' march of the Maumee River), Col. Hardin, with six hundred militia and a company of regulars, was ordered to take the advance and surprise the enemy, if possible. On reaching the Maumee, on the evening of the 15th, they found the wily Indians had disappeared. The main body of the army arrived early on the 17th, and, finding no enemy, commenced the work of destruction. The sum total of the achievements of the ensuing four days was the burning of the principal village at the head of the Maumee, and five others, also about twenty thousand bushels of corn.

On the 18th of October, a detachment of three hundred men, under command of Col. Trotter, was sent out to look for an enemy, which resulted in a little skirmishing, little fighting, small losses on both sides, and some cowardly conduct on the part of the militia. On the 19th, Col. Hardin was sent forth with the same, or, at least, an equal force, and for similar purposes. He marched across the St. Joseph's to a point about twelve miles west of the junction of said river with the St. Mary's, where he fell into an ambuscade of Indians, numbering, according to Judge Marshall, in his life of Washington, about seven hundred (though other authorities make the number much smaller), under command of the distinguished Chief, "Little Turtle." The trace followed by Col. Hardin led through a narrow prairie, flanked on both sides with a thick growth of timber, in which the Indians lay in ambush. The troops were marching in single file through the prairie, their line extending to a distance of more than a quarter of a mile. At the moment deemed

opportune by the sagacious savage chief, the fire was opened upon them, and in a few minutes fifty-two of the militia were killed, the remainder retreating. Twenty-two out of thirty-one regulars in the action were killed. The whole number killed of Col. Hardin's command fell little short of one hundred! The retreat became a rout, a portion of the enemy closely pursuing, and it was not until after midnight that the last of the defeated and demoralized militia got into camp! Those of the Indians that remained on the battle-field held a dance of victory during the night, exulting, says McBride, with frantic shouts and gesticulations over the dead and dying Americans!

On the twenty-first day of October the homeward march was commenced. During the night scouts came into camp with the report that the Indians were collected in force at the site of their chief village. Col. Hardin, who was a brave, ambitious man, urgently suggested to Gen. Harmar to return and give them one more fight. Thereupon a force of three hundred and forty militia, under command of Col. Hardin, and sixty regulars under Major Wyllys, the detachment being placed under the command of the latter, was organized and reached its destination as daylight was beginning to appear, the purpose being to get there this early in order to surprise the enemy. The gallant Major Fontaine was in the advance. On getting sight of the Indians he charged upon them, firing his pistols and drawing his sword. He fell dead at the first fire of the savages; but they were soon charged upon and driven from their position by the regulars under Major Wyllys, and by some militia under immediate command of Major McMullen. They however again rallied, and a severe engagement ensued, the desperation of the savages, says McBride, surpassing anything previously known, many of them throwing down their guns and rushing upon the soldiers, tomahawk in hand, carrying fearful destruction everywhere in their progress! The regulars killed in this engagement, including Major Wyllys, numbered fifty-three, and the militia one hundred and three! Of wounded there were but twenty-eight, showing the deadly aim and excellent marksmanship of the Indians. The total loss in killed and wounded was therefore two hundred and six men, being more than half of the entire detachment! Those not disabled started for Gen. Harmar's camp and arrived there in the evening, but they were vigorously pursued by the enemy, with whom a running fight had to be maintained most of the way, with probably a small loss on both sides. Gen. Harmar did not return, with what was left of his army, to the scene of the conflict, to bury the dead heroes, (perhaps it would not have been good generalship;

to have attempted it), but left them to be scalped and mutilated by the savages, their bodies to be consumed by vultures, and their bones to lay bleaching on the ground; but promptly took up the line of march for Fort Washington, where he arrived with the remnant of his command and the few prisoners taken, on the third and fourth days of November, having been pursued almost the entire distance from the battle-field, in more or less force, by the victorious Indians. The victory manifestly was with "Little Turtle", and not with Gen. Harmar, although the latter claimed it in an order issued on the night of the 22d of October. The gallant Cols. Hardin and Trotter had suffered defeat and mortification, and hence there were few or no laurels for their brows. The country mourned the loss of the brave Fontaine and Wyllys, and many other gallant officers and men, whose unburied bodies were left to moulder into dust (says McBride) on the banks of the Maumee or the streams which form it, and whose whitened skeletons were collected and given decent burial four years thereafter, by the men of General Wayne's army when they were sent to build Fort Wayne at the junction of the St. Joseph's and St. Mary's, in 1794.

The destruction of Indian towns and the burning of the corn crop of the Indians, was all that was accomplished by Gen. Harmar, and that little, too, at an immense expense of life. The campaign was not a success in any proper sense of the word, but appears, as it ought, on the page of impartial and authentic history, *as a defeat!* In proof that it must be so regarded, notwithstanding Gen. Harmar's acquittal of all blame, by a Court of Enquiry, is the fact that it failed to secure immunity from Indian attacks of the frontier settlements, even for a brief period! And there is no doubt that the Indians considered themselves the victorious party, who, being greatly exasperated by the destruction of their villages and the loss of their corn, only became more and more determined in their hostility towards the western frontier settlers.

And thus ended the Harmar campaign against the Indians on the upper Maumee, in 1790. It is but an act of simple justice to the memory of the chief commander of this expedition (General Harmar), and to the next ranking officer (Col. Hardin), to give, in concluding this paper, a brief biographical sketch of each of them; especially is this due to them for the reason that their public career did not terminate with this unfortunate expedition.

COL. JOHN HARDIN.

The second officer in rank, in the Harmar campaign to the Maumee (Col. Hardin), was a native of Fauquier county, Virginia, born there in

1753. In Marshall's History of Kentucky it is stated that he was, from his early youth, initiated into the life of a backwoodsman, and had acquired uncommon skill as a marksman and hunter. In the spring of 1774, when not quite twenty-one years of age, he was engaged in an action with the Indians and received a wound in the knee. Before his entire recovery he joined the famous expedition of Lord Dunmore to the Indian towns on the Scioto. Soon after the commencement of the Revolutionary war he became a Lieutenant in the celebrated rifle corps of Gen. Daniel Morgan. He stood high in the confidence of that distinguished officer, and was often selected by him for enterprises of peril, requiring discretion and intrepidity. And on one occasion, special thanks of the Commander-in-Chief of the Northern army (Gen. Gates), for an act of great skill, discretion and heroism.

In 1786, Col. Hardin emigrated to Kentucky and settled in Washington county. During the ensuing six years he participated in many of the campaigns against the Indians, and was distinguished for his gallantry and courage. He was uniformly successful as a Military Commander, with the single exceptions during the expedition to the Maumee, when he encountered the Indians under "Little Turtle." He was prevented by some physical debility from participating in the St. Clair campaign in 1791.

In 1792, Gen. Washington, then President of the United States, appointed Col. Hardin a Peace Commissioner to the Ohio Indians. While in the discharge of his duties as such he was killed by some marauding Indians, merely from some motives of plunder, they desiring to get possession of his horse and equipments, which were, in their eyes, attractive and valuable. The murder was committed in the night time, while he was unguarded and comparatively defenceless. It was perpetrated within the present limits of the county of Shelby, Ohio, upon the site of the village of Hardin, named in honor of the gallant Colonel. The county of Hardin, Ohio, was also named to perpetuate his memory and fame. Kentucky, Tennessee and Illinois have also in a similar manner honored Col. Hardin by giving his name to counties, and in the first-named State, to a town, the county seat of Breckenridge county.

Col. Hardin, during the Revolution, lived in the "Monongahela Country" where he had a son born (Martin D.), who became an eminent man; was frequently a member of the Kentucky Legislature; was Secretary of State of Kentucky; served, with the rank of Major, in the North-Western army, during the war with England; and was one of Kentucky's United States Senators in 1816-17. The Col. John J. Hardin who commanded a regiment in the war with Mexico, and was killed at

the battle of Buena Vista, while leading his men with heroic gallantry in the final charge, February 23, 1847, was a son of Martin D. Hardin, and therefore a grandson of the subject of this brief memoir, for whom he was named.

Col. John Hardin was, just before his death, appointed General of the first Kentucky Brigade, and was a man of popularity and strength, "of unassuming manners and great gentleness of deportment, yet of singular firmness and inflexibility as to matters of truth and justice." His tragical death (having perished at the hands of base assassins) occurred before he reached the end of his thirty-ninth year! The premature death of the heroic Hardin, who died before he had reached "the noon of life," was greatly deplored by the whole country, and by President Washington especially, with whom he had maintained friendly and confidential relations. Kentuckians have always considered it a gracious act to hold in high regard the name and memory of Col. Hardin, one of their early and courageous Pioneers. In Kentucky there have been few more honored names than that of HARDIN!

GEN. JOSIAH HARMAR.

The Commander-in-Chief of the Expedition to the Indian towns on the Maumee, in 1790 (Gen. Harmar), was a native of Philadelphia, born in 1753, the same year that gave birth to Col. John Hardin, his next highest officer, in the above-named campaign. He was educated, says the "Historical Record," at the Quaker school of Robert Proud of said city. In the autumn of 1776 he was commissioned a Captain of the First Pennsylvania Battalion, and became a Lieutenant-Colonel during the next year. Serving his country with honor until the close of the Revolutionary war, he was breveted a Colonel in 1783. The next year he was sent on a mission to France, bearing to the French Government the ratification of the definitive Treaty of Peace. In 1787 he was made a brevet Brigadier-General; and in 1789 he was appointed Commander-in-Chief of the Western Department of the army, and as such he arrived at Fort Washington near the close of the year and took command. He employed himself as above detailed, in 1790, in commanding an army against the Maumee Indian towns. Little Turtle, the master spirit who so successfully directed the movements of the Indians against Gen. Harmar's army, was a Miami Chief of great ability, who subsequently took a conspicuous part against the armies of Gens. St. Clair and Wayne.

It has been zealously urged in defense of Gen. Harmar, that his expedition to the Maumee, or as it was called on our earlier maps, the "Miami of the Lakes," was a successful one, in that all was accomplished

that was expected of it, namely, the destruction of their corn and the burning of their villages! Perhaps that is so, and perhaps the Court of Inquiry took the same view of the subject when they declared him not blameworthy in his conduct of the campaign. But if it was a victory, it was surely a very dear bought one—the number of valuable lives lost were out of all proportion to the achievement! In this connection it is due to the memory of Gen. Harmar to give the chief points in the order he issued after the last battle was fought with the Indians, dated October 22, in which he claimed a victory. He compliments the militia for their bravery and success in killing so many of the enemy, although he regrets the loss of so many of his own men, which, nevertheless, he pronounces “inconsiderable in comparison to the slaughter among the savages.” “Every account,” continues the Order, “represents that upwards of one hundred warriors fell in the last battle, and that the resolution and firm determined conduct of the militia that day had effectually retrieved their character in the opinion of the General, and that he knows they can and will fight.”

It was in September, 1791, when Gen. Harmar was pronounced unblamable in his conduct as Commander in the West, by a Court of Inquiry. In the same year he resigned his Commission in the army, and in 1793 he was appointed Adjutant-General of Pennsylvania, which indicated the continued confidence of the people of his native State. He continued to reside in or near his native city until August 20, 1813, when he died. His burial is represented to have been conducted with “military pomp and circumstance, his war-horse being dressed in mourning, and his sword and pistols displayed upon his coffin.”

THE MILITARY EXPEDITIONS

OF

GENERAL CHARLES SCOTT AND GENERAL JAMES WILKINSON AGAINST
THE INDIANS IN THE WABASH VALLEY IN 1791.

The expedition of Gen. Harmar in 1790 having resulted disastrously, the Indians were only the more exasperated, because of the burning of their corn, and the destruction of their towns and villages. Flushed with victory, they naturally became more vindictive and bold, and more determined in their efforts to harass, and, if possible, break up the white settlements. They continued their marauding expeditions almost incessantly during the winter, attacking, among other places, Colerain in the Miami Valley, and Big Bottom in the lower Valley of the Muskingum, where they murdered fourteen persons. The result was great consternation and alarm all along the border settlements. Gen. Rufus Putnam, writing to President Washington early in the winter, represented the situation of the frontier settlers as truly critical, indeed, as being in the utmost danger of extermination, "of being swallowed up", to use his own expressive and forcible language.

In anticipation of this condition of things, as the natural results of Harmar's defeat, the Legislature of Virginia, on December 20, 1790, passed a resolution, authorizing the Governor to make provisions for the protection of the frontiers till the General Government should take efficient measures to effect that object. Governor Randolph, thereupon, "immediately despatched orders for the enlistment, before the first of March, 1791, of several companies of rangers, for the protection of the frontiers, and appointed Charles Scott, Brigadier-General of the militia of Kentucky, with orders to raise a volunteer force for the protection of that district."

Upon these proceedings being reported to Congress, "that body, early in January, 1791, established a local Board of War for the District of Kentucky, composed of Generals Charles Scott and Isaac Shelby, Col. Benjamin Logan, and Messrs. John Brown and Harry Innis; with discretionary powers to provide for the defence of the settlements, and the prosecution of the war." Congress further provided, early in March of the same year, for raising another regiment to be employed generally

against the hostile Indians. And that body also, considering it necessary to send an expedition against certain unfriendly Indians in the Wabash valley, directed General Scott to raise, under the direction of the "Kentucky Board of War", a volunteer force of seven hundred and fifty mounted men for said service. An excess of men volunteered, who, led by their gallant commander, the heroic Scott, moved towards their destination (the Wea towns on the Wabash), crossing the Ohio river, at the mouth of the Kentucky, on the twenty-third of May, and reaching the Wabash on the first of June. Col. John Hardin and Col. James Wilkinson were of this command.

Col. Hardin was detached with sixty mounted infantry, and a troop of light horse, under Captain McCoy, to attack the villages on the left, which resulted in killing six warriors, and the capture of fifty-two prisoners.

Col. Wilkinson was ordered to advance with the first battalion and attack some retreating Indians, and, in the language of the official report, he "destroyed all the savages with which five canoes were crowded."

On the next day Col. Wilkinson was detached with three hundred and sixty men to an Indian town (Tippecanoe), eighteen miles from camp, and on returning the day after, he reported, as the result of the two days' operations, "the destruction of a most important settlement of the enemy, on the west bank of the Wabash." It was situated a few miles from the present city of La Fayette. The scene of the first day's battle was "Wea Plains," sometimes called Wea Prairie, just below the mouth of Wea creek, and also a few miles below La Fayette.

The expedition returned to the "Falls of the Ohio," on the fifteenth day of June, and disbanded, having killed twenty-three Indians, and captured fifty-eight.

The "Kentucky Board of War," at the suggestion of Governor St. Clair, decided soon after the close of Scott's campaign, to send another expedition to the Wabash Valley, to be commanded by Col. Wilkinson, the object being the destruction of the Indian towns on the Eel river, a tributary of the Wabash, and with which it unites at the present city of Logansport. Five hundred and twenty-five mounted volunteers were raised for this expedition. On the first day of August, 1791, Col. Wilkinson took up the line of march from Fort Washington, for the afore-named hostile towns. Late in the afternoon of the seventh he reached the Wabash, "a league and a half above the mouth of Eel river, and crossing it soon reached the Indian town. The enemy were flying in every direction, having abandoned their town after hearing of Wilkin-

son's approach." Some fighting, however, ensued, and resulted in the killing of six warriors, two squaws, and one child, and in capturing thirty-four prisoners. One unfortunate white captive was released. The loss of the expedition was two killed and one wounded. The Indian town (Kenapacomaqua was its Indian name) was destroyed by fire, as were also over four hundred acres of growing corn, and a Kickapoo village of thirty houses.

The expedition reached the "Falls of the Ohio" on the twenty-first day of August, on their return, having marched, by accurate computation, four hundred and fifty-one miles from Fort Washington. The services rendered during the campaign, the commander regretted, fell far short of his wishes, intentions, and expectations; he, however, complimented his troops, and congratulated himself upon having captured the sons and sisters of the great Chief of the Ouiatenon nation. This expedition, and also those of Generals Harmar and Scott, were directed chiefly against the Miamis, under Little Turtle, and the Shawanese, under Blue Jacket.

GENERAL JAMES WILKINSON.

GEN. JAMES WILKINSON was born in Maryland, in 1757. He studied the medical art in Philadelphia, says Lossing, and after the battle of Bunker's Hill, he hastened to Cambridge, and entered the army as a Captain in Rea's New Hampshire regiment. He was with Arnold in the Northern Department, in 1776; was in the battles of Trenton and Princeton, and after the surrender of Burgoyne, he was sent by Gates to Congress with a verbal account of that event. He was then on Gates' staff as Adjutant-General of the Northern army. For that service he was breveted Brigadier-General, and was appointed Secretary to the Board of War. Joining with Gates in his intrigues against Washington, he left the Board of War and was made Clothier-General of the army. Settling in Kentucky after the revolution, he became active in civil and military affairs in the Mississippi Valley. He had his residence at Lexington, and as agent of a commercial company in Philadelphia, he was instrumental in opening an extensive trade with New Orleans.

In 1791, he was appointed a Colonel, and as such commanded the foregoing expedition to the Wabash. Later in this year he held the rank of Lieutenant-Colonel of the second regular Infantry, and in March, 1792, he became a Brigadier-General. He commanded, says the American Cyclopaedia, the right wing of Wayne's army at the battle of the Maumee, fought August 20, 1794. In December, 1796, immediately after

the death of Gen. Wayne, he became General-in-Chief of the army, with his head-quarters at Pittsburg, and in 1798, on the organization of the Territory of Mississippi, fixed his head-quarters at Natchez. As joint commissioner with Governor Claiborne, he received Louisiana from the French in 1803, and was made Governor of that Territory in 1805, serving as such until the next year. He successfully opposed and exposed the revolutionary schemes of Burr in the south-west, and in the spring of 1813 was made a Major-General, after having been acquitted of the charge of receiving bribes from Spain. In April, 1813, he reduced Mobile, and in May was removed to the Northern frontier, where he had little success, in part because of a feud between him and Gen. Wade Hampton, and because of his somewhat intemperate habits. In February, 1814, he was superseded in his command and placed under arrest, and a Court-martial investigated his conduct in January, February, and March, 1815, which resulted in an honorable acquittal. Upon the reduction of the army, however, soon thereafter, he was finally retired. In 1816, he published a work, in three volumes, entitled, "Memoirs of my own Times." Having acquired large estates in Mexico, he went to that country, and died near the city of Mexico, on the 28th of December, 1825, at the age of sixty-eight years.

Gen. Wilkinson was a gentleman of commanding presence, elegant in person and manners, and most captivating in social life. Judge Burnet became personally acquainted with him while his head-quarters were at Fort Washington, and he speaks of him in his "Letters" as an accomplished officer, and one of the most fascinating men he had ever seen. "To the easy and graceful deportment of a polished gentleman," says Burnet, "he united the ambition of Cæsar, and the self confidence of Napoleon." He has also been understood to have been a "man of strong prejudices, unsparing and unjust often in his judgment and expressions concerning his opponents (and he always had many of them), and not always scrupulous as to facts in maintaining his opinions." He mercilessly criticised his brother officers and contemporaries, and often manifested ill-temper, and a vindictive spirit. Certain it is he was frequently subjected to Court-martials, more frequently, indeed, than would seem to be compatible with a mild disposition, good temper, and an amiable, kind spirit.

GENERAL CHARLES SCOTT.

GENERAL CHARLES SCOTT was honorably and conspicuously identified with a number of the successful military expeditions of the "Great North West," and was really a meritorious military leader. And not-

withstanding his success and meritorious conduct on many occasions, he is comparatively little known by the men of the present day. Few even know that a commander of that name ever was, in any direct or conspicuous manner, identified with the subjugation of the Indian tribes of the "Great North West."

General Charles Scott was born in Cumberland county, Virginia, in 1733, and was a non-commissioned officer at Braddock's defeat on the Monongahela river, July 9, 1755. He entered the Revolutionary army as a Captain, became a Colonel in 1776, and for gallant services at Trenton was made a Brigadier-General, and served as such until 1780, when he was captured at Charleston, South Carolina, and was not exchanged until the close of the war. He served with Wayne at the storming of Stony Point, in 1779, and was particularly distinguished at the battle of Monmouth, in 1778.

General Charles Scott entered into the married relation with Mrs. Sarah Campbell, great grand-daughter of Governor Spotswood, and daughter of Patrick Henry. At the time of this marriage she was the widow of Robert Campbell (brother of the Poet, Thomas Campbell). She long survived her second husband, her death not occurring until the year 1846, or perhaps a year or two later. In 1783 General Charles Scott removed from his native State and settled in Woodford county, Kentucky. In the spring of 1790 he served as a subordinate officer under Gen. Harmar against the Indians upon the Scioto, as detailed in the previous paper. In 1791 he commanded an expedition to the Wabash, as detailed in the foregoing part of this paper; and he also served as a Brigadier-General of levies in the same year in St. Clair's army, although he did not actively participate in the battle, not being present.

After the disastrous battle and defeat of Gen. St. Clair on the fourth of November 1791, the Government decided to raise a largely augmented force to operate against the hostile Indians, and for the protection of the frontier settlers. To decide upon the Commander-in-Chief (Gen. St. Clair having resigned) was a question of some difficulty. President Washington had under consideration General Anthony Wayne, of Pennsylvania; General Daniel Morgan, General Henry Lee, and Col. William Darke, all of Virginia; and Gen. Charles Scott, of Kentucky. The decision was at length made in favor of Gen. Wayne; but it is fair to presume that Gen. Scott stood high with President Washington to be seriously thought of for the position of Commander-in-Chief of the Western army; also, to have been made Chief of the "Board of War" of Kentucky.

In the autumn of 1793, Gen. Scott marched with one thousand Ken-

tucky volunteers, that he had been largely instrumental in raising, to join Gen. Wayne's army operating against the Indians, and overtook it on the fifteenth of October near Fort Jefferson. He found the Commanding General, however, unprepared for a Winter Campaign; his troops, therefore, after assisting in the completion of Fort Greenville, were discharged and sent to their homes, the Regulars meanwhile going into winter-quarters.

On the twenty-sixth of July, 1794, Gen. Scott, with about sixteen hundred mounted men from Kentucky, joined Gen. Wayne, at Fort Greenville, the whole army moving two days thereafter. The battle of "Fallen Timbers", on the Maumee, near Perrysburg, just below the Rapids, was fought on the twentieth of August, just twenty-five days after Gen. Scott joined Gen. Wayne's army, in which he commanded the Kentucky troops.

By this time Scott had attained to the rank of a Major-General; and having acquitted himself well, was very popular. Gen. Wayne was fully satisfied with him, for his language, in his report of the battle was, that "the bravery and conduct of every officer belonging to the army merit my highest approbation."

But Major-General Scott was also known as a civilian—a statesman. He was one of the first Presidential Electors that Kentucky elected, having been chosen in 1793. He was again elected in 1800, in 1804, and again in 1808, making four elections to that honorable position, showing that he largely enjoyed the confidence of the people of his State. In the last-named year he was also elected to the office of Governor of the Commonwealth of Kentucky; and the Legislature of his State likewise manifested the high esteem in which they held him, by giving his honored name to one of the counties of Kentucky. His gubernatorial term expired (after a service of four years) in 1812, when he was succeeded by Governor Shelby. And thus was brought to an honorable close the career, military and civil, of Gen. Charles Scott. He was on the verge of four score when he retired from the Governorship, which was the last public station he occupied. His was an eventful, checkered, honorable, useful career. Gen. Charles Scott, the honored octogenarian hero, died in Kentucky, full of honors and of years, highly esteemed by all that knew him. The "United States Gazette," one of the leading papers of the country, published in Philadelphia, closed an obituary notice of him as follows: "The unbounded philanthropy of General Scott, united with that social disposition which so strongly marked his private life, will cause his memory to be held in sacred remembrance by

his numerous friends and acquaintances. But the services which he has performed for the Republic in the Revolutionary war, in the various Indian wars of the West and North-West, and while Governor of the State of Kentucky, have erected for him a monument in the recollection of his countrymen as durable as the Republic itself."

GENERAL ST. CLAIR'S EXPEDITION AGAINST THE INDIANS IN 1791.

It has already been intimated that the expedition of Gen. Harmar in 1790, accomplished nothing towards securing peace with the hostile tribes of the North-West. It did not even secure temporary immunity from their murderous incursions. And no better or different results followed the expedition of Gen. Scott in May and June, 1791, to the Indians on the Wabash; and of Gen. Wilkinson in August of the same year to the Eel river. The natural effect of the devastations perpetrated by those expeditions would be to intensify the exasperation and hostility of the savages towards the frontier settlers. And upon Harmar's defeat in October, 1790, no other result was anticipated by Congress, and by the Executive Department of the General Government.

Accordingly, measures were at once taken to prepare for the emergency. In addition to the forces raised for the expeditions of Scott and Wilkinson, already described, a larger army than had yet been in the North-West, was determined upon; active movements were therefore promptly made to organize such an army. The design being to raise a force of such numbers as to readily build a line of forts from Fort Washington, on the Ohio river, to the head of the Maumee river; and to insure success to the campaign with a moral certainty, whatever combinations the hostile tribes might make; for it was believed that negotiations were going on, looking to the formation of a confederacy of the Miamis under Little Turtle, the Shawanese under Blue Jacket, and the Delawares under Buckongahelas, and some straggling tribes, for purposes of mutual protection and defence, as well as for combined attack.

On the third of March, Congress passed an "Act for the raising and adding another regiment to the military establishment of the United States, and for making further provision for the protection of the frontiers." In the execution of the provisions of that act, the President (says the author of *Western Annals*), immediately appointed Governor St. Clair Commander-in-Chief of the army in the North-West, and authorized him to raise an army of three thousand men, to be employed against the hostile Indians in that territory. Efforts meanwhile, however, for negotiating a peace with the hostile tribes of the North-West

were made by the General Government. Col. Thomas Proctor was appointed Peace Commissioner, and he left Philadelphia on his mission, on the twelfth of March. It was a fruitless mission—the details I have not space to give—except that he may have been slightly instrumental in procuring the subsequent neutrality of the Iroquois.

Gen. St. Clair received elaborate instructions from Gen. Knox, Secretary of War, and in April proceeded to Pittsburg to complete arrangements for raising his army and organizing it. Gen. Richard Butler, of Pennsylvania, a gallant officer in the Revolution, who served with honor in Morgan's famous Rifle Corps, and was the ranking officer of the Pennsylvania levies, was appointed the second officer in St. Clair's army. He was actively engaged in the spring and early summer in recruiting. Slowly the troops gathered at Fort Washington and Ludlow Station, six miles distant, when on the 17th of September, being then 2,300 strong, they marched forward and built Fort Hamilton, the first in the chain of forts to the Maunee, being distant 22 miles from Fort Washington. On the 12th of October they commenced the erection of Fort Jefferson, 44 miles from Fort Hamilton, within the present county of Darke, 6 miles from Greenville, the county seat. On the 24th of October the march was resumed, the fort having been completed. The Commander-in-Chief was suffering from sickness, provisions were not abundant, the roads were wet and heavy, the militia were daily deserting, and circumstances generally were unfavorable for a successful campaign, the effective men now numbering only 1,500, not including those that were garrisoning forts Hamilton and Jefferson, and those looking after the deserters, and guarding the supply-trains. Such being the condition of things on the evening of November, 3, when the army was encamped on a branch of the Wabash, now in Mercer county, Ohio, within a mile or two of the Indiana State line, and in the south-western part of the county, five miles distant from the Darke county line. Here, on the morning of November 4, 1791, was defeated, and fearfully cut up, the army of Gen. St. Clair, by probably about 2,000 Indians, the militia being first attacked, who gave way. The right wing or first line was commanded by General Butler, and the second line by Col. Darke. The militia under the command of Col. Oldham had been marched across the small fordable stream, a tributary of the Wabash, and encamped on high ground about four hundred yards distant from the first line, or right wing, commanded by Gen. Butler, and about seventy yards farther from the second line, under command of Col. Darke.

The battle commenced early in the morning, and continued three or four hours. Gen. St. Clair was evidently surprised, both as to the time

of the attack and as to the strength of the enemy. He had no idea that the wily savages were present in such overwhelming numbers. In the last personal interview had with President Washington, St. Clair was reminded by him of the character of the enemy he was to encounter, and was, moreover, earnestly and repeatedly admonished against being surprised. No marvel, therefore, at the strong and emphatic expressions, and very unusual manifestations of grief and disappointment by the President, when hearing of the disastrous defeat of his former gallant and esteemed companion in arms, and of the almost total destruction of his army!

It may be urged in extenuation, that Gen. St. Clair failed, from some cause, to obtain a knowledge of certain facts that were reported to Col. Oldham and Gen. Butler by Captain Sloo, as the result of reconnoitering outside of the camp until midnight, and which facts were well calculated to raise the presumption of the presence of the enemy in considerable strength. Had the information, obtained by Capt. Sloo, been communicated promptly to the Commander-in-Chief, he would probably have been more vigilant.

At about half an hour before sunrise (but after the morning parade), the militia, posted as above indicated, and while engaged in preparing their morning meal, were attacked, *unexpectedly* attacked, by a large body of Indians, supposed to have been commanded by the infamous renegade Simon Girty. The distinguished "Little Turtle," however, was chief commander of the Indians. An attack upon raw militia, under circumstances so well calculated to throw them into confusion, was of course successful. They made a small show of fight upon the first onslaught, but soon fled (many of them throwing away their arms), ran over the creek, and through the first line of the main army, producing there some consternation and disorder. The Indians closely pursued, and in a short time the battle became general, the enemy being in force sufficient to make simultaneous assaults almost around the entire encampment of St. Clair's army. In Gen. St. Clair's official account of the battle it is stated that the great weight of the enemy's fire was directed chiefly against the centre of the first and second lines, where he had placed his artillery, and that his artillerists were repeatedly driven from their positions by the enemy, with great slaughter. Great confusion thereupon ensued, and Col. Darke was ordered to make a bayonet charge upon the enemy with a view of turning their left flank. This order was executed with great spirit, and the Indians gave way and were driven back three or four hundred yards; but for want of a sufficient number of riflemen to pursue this advantage, the Indians soon renewed

the attack with much vigor, being probably reinforced, and Col. Darke and his troops were in turn obliged to give way and retreat. A similar order, and with the same results, was executed in gallant style by the second regiment, composed of the battalions of Majors Butler and Clark. For several hours these successes and reverses rapidly followed each other, continually resulting, however, in great loss of life, especially among the officers. All the officers of the second regiment were killed or seriously wounded, except three; and when the artillery was all silenced, every artillery officer had been killed, except Capt. Ford, and he was badly wounded.

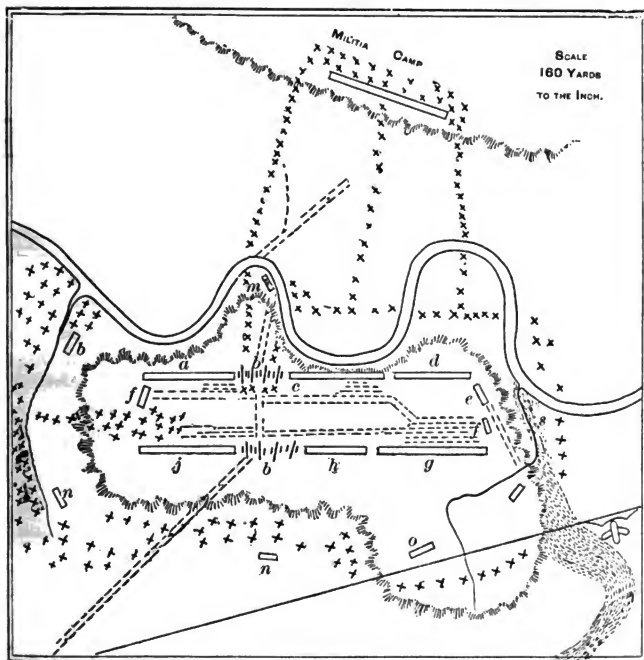

For three hours the battle thus raged, and the conduct of the troops (after the flight of the militia at the commencement) was worthy of all praise. By this time more than half of the army had fallen, and an immediate retreat was decided upon. The remnant of the army was accordingly placed in position to march towards Fort Jefferson, but to get possession of the road leading to that point, another bayonet charge had to be made upon the enemy, which was attended with further loss of life. The artillery was all abandoned, of necessity, as not a single artillery horse was left alive. During the entire engagement Gen. St. Clair was in the thickest of the fight, and narrowly escaped with his life, a number of balls having passed through his clothes, and three horses being killed under him, or as he was endeavoring to mount them. He left the field at last on a pack-horse which he had hurriedly mounted, after his third horse was shot, just before the retreat was ordered.

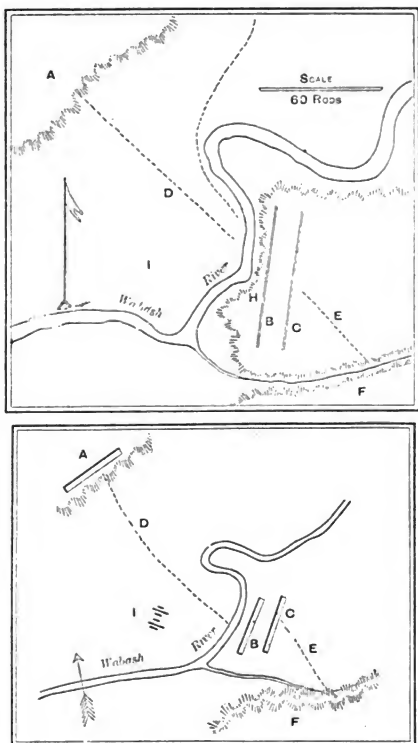

The retreat, of course, was precipitate, a flight rather, the Indians pursuing the routed army for four miles, killing many that were unable, from various causes, to keep up with the main body, which reached Fort Jefferson late in the day!

Six hundred and thirty men were killed, and two hundred and forty were wounded, not counting civilians, such as wagoners, drivers of cattle, pack-horsemen, and others. Quite a number of women (the wives of soldiers) were also killed or wounded. The proportion of officers lost in this disastrous campaign, was unusually large. Among the conspicuous officers killed were Gen. Richard Butler, Col. Oldham, and Majors Ferguson, Hart and Clark. Adjutant-General Winthrop Sargent, Col. William Darke, Lieutenant-Colonel Gibson, Major Butler, and the Viscount Malartie (the General's Aid-de-camp) were of the wounded. Many Captains, Lieutenants, and other subaltern officers were also killed or wounded.

At a Council of War, held at Fort Jefferson, on the night of the 4th of November, it was decided to return with all due speed to Fort Wash-

ington, which point was reached on the evening of the 8th of November, the army leaving Fort Jefferson at 10 o'clock at night, soon after the prompt return to Fort Washington was determined upon, and marched all night.

A—High ground on which the militia were encamped at the commencement of the action.

B C—Encampment of the main army.

D—Retreat of the militia at the beginning of the battle.

E—St. Clair's trace, on which the defeated army retreated.

F—Place where Gen. Butler and other officers were buried.

G—Trail to Girtystown, on the St. Mary's river, running northwardly on map.

H—Site of Fort Recovery, built by Gen. Wayne, the line between Darke and Mercer counties.

I—Place where a brass cannon was found buried in 1830; it is on the bottom from whence the Indians were three times driven to the high land with the bayonet.

The map of the battle-ground is from the survey of Mr. John S. Houston, of Celina, as given in Howe's Historical Collections.

The principal tribes which Gen. St. Clair's army encountered, were the Delawares, Miamis, Shawanese, Wyandots, and Ottawas, with some Chippewas and Pottawattomies. The number of warriors in the battle has never been ascertained; their estimated strength generally ranges, however, between one thousand and three thousand. Gen. St. Clair, in his special report, stated that "he was overpowered by numbers; that, in a few minutes after the attack, his whole camp, which extended above 350 yards in length, was entirely surrounded and attacked on all quarters."

Gen. St. Clair made an official report of his engagement with the Indians to the Secretary of War (Gen. Knox), under date of November 9th, and on the 12th of December said officer communicated its substance to Congress.

Gen. St. Clair, aware of the public odium that rested upon him, asked of the President the appointment of a Court of Inquiry, to investigate his conduct. This was not deemed expedient, but a committee of Congress was appointed, on motion of Mr. Giles, of Virginia, to consider the subject, who, after maturely deliberating upon the matter referred to them, reported "that the causes of the failure of the expedition were the delay in preparing estimates for the defense of the frontiers, and the late passage of the act for that purpose; the delay caused by neglect in the quartermaster's department; the lateness of the season when the expedition was commenced; and the want of discipline and experience in the troops." The report concluded with a full and complete exoneration of Gen. St. Clair "from all blame in relation to everything before and during the action." In commenting upon his honorable acquittal of all blame by the committee of Congress, appointed to inquire into the causes of the failure of the expedition, and of the concurrence therein by the Secretary of War, as given in a report to Congress, Judge Marshall, in his life of Washington, remarks, with his usual felicity of manner, "that more satisfactory testimony in favor of St. Clair is furnished by the circumstance that he still retained the undiminished esteem and good opinion of President Washington."

Notwithstanding the foregoing facts, which were highly favorable to him, Gen. St. Clair became very unpopular with the unthinking, inconsiderate masses, and continued to be a greatly maligned patriot! He had been *defeated*, and that was sufficient with the ignorant, the thoughtless, and with superficial thinkers and those of limited knowledge; of the facts of the case, to bring down upon him, all over the country, "one loud and merciless outcry of abuse, and even detestation!" The undoubted patriotism, unflinching courage, and eminent services to

his country, of Gen. St. Clair, it has long seemed to me, were more illy requited by his countrymen, and his reputation held further below his real merits, by them, than was the case with any other of the many gallant chieftains who appeared upon the fiery theatre of western Indian warfare! If our western history furnishes a parallel to it, it is presented in the case of Captain Michael Cresap, with whose reputation his countrymen have also dealt with exceeding harshness; and I might place Gen. William Hull in the same category.

Not long after his defeat Gen. St. Clair resigned his military commission, and Col. Wilkinson succeeded to the command of Fort Washington. In January, 1792, Col. Wilkinson raised a force of two companies of mounted volunteers, one from Columbia, the other from North Bend, commanded, respectively, by Captain John S. Gano, and Captain Brice Virgin, the two aggregating over 150 men; to which he added 200 regular soldiers from Fort Washington, being two companies, in one of which William Henry Harrison, afterwards President of the United States, served as Ensign. This force of 350 men was raised to make an expedition to the scene of Gen. St. Clair's defeat, for the purpose of burying the dead, and of collecting such property of value as might still be found. They set out, January 25, under command of Col. Wilkinson, reached the battle-field February, 1, and found 78 bodies lying upon the ground, in the last four miles they travelled, that being the distance St. Clair's army was pursued. The great body of the slain, however, were found on the battle-field, and within an area of about 40 acres. They had been scalped and stripped of all their clothing that was of any value. They buried the dead bodies, and after a stay of two days started on the return march, having reclaimed one field-piece, two uninjured gun-carriages, the irons of some burnt gun-carriages, and a few muskets.

ADJUTANT-GENERAL WINTHROP SARGENT, of St. Clair's army, was "a man of mark." He was born in Gloucester, Massachusetts, March 1, 1753. After spending a few years at sea, he, in 1775, joined the Continental Army. After serving as Navy Agent in his native town for a brief period, he joined the Artillery branch of the service, under the direct command of Col. Knox, and served therein to the close of our Revolutionary struggle. In 1788 he became Secretary of the Territory north-west of the Ohio, in which office he served, sometimes being Acting-Governor, until 1798, when he was made Governor of Mississippi Territory, and continued to act as such until 1802. He had also served in General Wayne's army in 1794-95, as Adjutant-General. His death occurred at sea, June 3, 1820. Gen. Sargent was one of the active and

influential men of the North-West for ten years, and impressed himself for good upon the laws there enacted, and the institutions there early established.

COL. WILLIAM DARKE, one of the most efficient officers in St. Clair's army, was a native of Pennsylvania, where he was born in 1736. While yet a child his parents removed to the vicinity of Shepherdstown, Jefferson county, Virginia. He served with the Virginia troops at Braddock's defeat, and was taken prisoner in the Revolutionary war, at Germantown, and took an active part, as commander of a regiment, in the siege of Yorktown, Virginia. Col. Darke was a brave man, and an undoubted patriot. He had a strong intellect, but was not a gentleman of much polish or cultivation. Frankness, courage, integrity, were his chief characteristics. He was popular, a man of the people, though of uncouth manners. He was elected a member of the Virginia Convention which was called to consider the question of the adoption of the United States Constitution. His neighbors and acquaintances also frequently manifested their confidence in him by electing him a member of the Legislature of the ancient Commonwealth of Virginia. Col. Darke died November 20, 1801.

GENERAL ARTHUR ST. CLAIR was one of the well-known and conspicuous characters of our Revolutionary era. But few of the leading men of Colonial times had a larger experience in military and civil positions than Gen. St. Clair. He was a native of Scotland, born in Edinburgh, in 1735, and some authorities represent that he came to North America in 1755, and served in General Amherst's army, as a member of the sixtieth British regiment, at the taking of Louisburg, in 1758. Certain it is, that he served as Lieutenant under General Wolfe, in Canada, in 1759 and 1760, actively participating at the storming and capture of Quebec in the former year.

Soon after the peace of 1763, we find him appointed to the command of Fort Ligonier, in Western Pennsylvania, where, or in its vicinity, he remained until the Revolution. In 1771, he was commissioned a Justice of the Peace of Bedford county; and as such, with the other Justices, he held the position of a Judge of the courts of the county. In 1773, upon the organization of Western Pennsylvania into the county of Westmoreland, Arthur St. Clair was appointed Prothonotary, or Clerk of the Court of said county.

In 1774, St. Clair was the military head of the county, or at least "represented the proprietors of Pennsylvania in the West," a position corresponding in powers and dignity with the military position better known afterwards as County-Lieutenant. In January, 1776, having

received a Colonel's commission, he proceeded to raise a regiment for the Continental army, and in six weeks he reported ready for duty in the field. In August, 1776, he was made a Brigadier-General, and served as such in the battles of Trenton and Princeton. In February, 1777, he was created Major-General, and in the succeeding June took command of Ticonderoga, by order of Gen. Schuyler. For evacuating it, in the face of the superior force of Gen. Burgoyne, he was tried by a court-martial, and acquitted unanimously. He served during the following years in various parts of the country, and was present at Yorktown in 1781, at the surrender of Cornwallis. Subsequently he joined the army of Gen. Greene in the South, and when the war closed he returned to the pursuits of peace in his chosen Western home.

Gen. St. Clair was elected a member of the Continental Congress in 1786, and was chosen President of that body February 2, 1787. Measures were taken while he was in Congress, looking to the establishment of civil government north-west of the Ohio river, and he was designated as Territorial Governor. Accordingly, in July, 1788, he arrived at the then newly laid out town of Marietta, at the mouth of the Muskingum river, and proceeded to put in motion, in the then wilderness, the machinery of a territorial government.

Gen. St. Clair remained Governor of the North-West Territory until 1802, when he returned to his old home in Westmoreland county, Pennsylvania, and died there August 31, 1818, aged 83 years. His remains repose in the cemetery at Greensburg, the county seat of Westmoreland county. His descendants, with three generations of whom I have had an intimate acquaintance, still remain near the ancestral home.

Gen. St. Clair had small ability for acquiring wealth, and less for retaining it, but he was a gentleman of talents, of firmness, of decision of character, of courage, and integrity.

THE EXPEDITION OF GEN. ANTHONY WAYNE AGAINST THE INDIANS ON THE MAUMEE, IN 1794.

The defeat of Gen. St. Clair was a most disastrous event in every view that can be taken of it. No battle ever fought by the Americans and Indians, in the North-West, had such disheartening, such fatal results, or equaled it in the destruction of human life. It was, indeed, the most terrible reverse the American arms ever suffered from the Indians. It produced a crisis in the affairs of the North-West that demanded immediate and vigorous action. An unprotected frontier of seven hundred miles, extending from the Allegheny range of mountains to the Mississippi river, was, by that crushing defeat, at once thrown open to the assaults of the exasperated, victorious, revengeful savages. Everywhere fear, consternation and alarm seized the frontier settlers, whose exposed situations now invited conflagrations, massacres, and unexampled and untold cruelties from their implacable enemies. Everywhere our adventurous, heroic western frontiersmen were under constant apprehensions of the relentless incendiary's blazing fagot, the deadly rifle, the murderous tomahawk, the brutal scalping-knife, wielded by the stealthy, unpitied, vindictive savages.

The difficulties, dangers, and perilous condition that, after St. Clair's defeat, at once environed the western settlements, which were all weak and of recent date, were realized and appreciated by the whole country; and many sympathizing thoughts and more than anxious eyes were turned towards them from all the other inhabited sections of our land. The Executive and Legislative Departments of the General Government, knowing, that to them was entrusted the proper protection of the frontiers, and desiring to do their duty and to meet the public expectation in the premises, proceeded promptly to inaugurate vigorous measures, looking to the early, adequate, and permanent support and security of the defenseless western settlers.

The Secretary of War (General Knox) apprehending that the recent success of the hostile Indian tribes would render them more daring and bold in their future incursions and attacks upon the frontier settlements, promptly gave such consideration to the subject, as its gravity and

momentous interest and importance demanded. Accordingly, on the 26th of December, 1791, Gen. Knox, having matured a plan for future operations, with a view to securing speedy and lasting tranquility on the Western frontiers, submitted it to Congress. After remarking upon the justice and equity of the policy of the Government toward the Indian tribes, and commenting upon the utter failure of all attempts, hitherto made to preserve peace with them, he asserted that "the principles of justice, as well as policy, and, it may be added, the principles of economy, all combine to dictate that an adequate military force should be raised as soon as possible, placed upon the frontiers, and disciplined according to the nature of the service, and in order to meet, with the prospect of success, the greatest probable combination of the Indian enemy." In his subsequent recommendations, on this subject, to Congress, he argued in favor of the enlargement of the military establishment to over five thousand men, to be enlisted for three years, besides expert woodsmen, to be employed as scouts. He also suggested the employment of mounted militia and friendly Indians, to act against the hostile Indians. These suggestions of General Knox met with favor, and Gen. Anthony Wayne, of Revolutionary fame, was appointed by President Washington, to command the army to be raised. He accepted the appointment as a high compliment from his old commander, and, as might have been expected, entered at once, with his characteristic energy, fearlessness and determination into the spirit of the enterprise. Accordingly, in June, 1792, General Wayne repaired to Pittsburgh, where he at once proceeded to inaugurate measures for raising an efficient, disciplined army for the subjugation of the hostile savage tribes of the North-West.

Recruiting proceeded satisfactorily during the summer and autumn of 1792, and when the winter set in a considerable army had been collected, mostly of undisciplined men, however. But the instructions early given by President Washington had been heeded by General Wayne, "to train and discipline his recruits for the service they are meant for, and not to spare powder and lead, so the men be made marksmen".

In December, 1792, General Wayne established a rendezvous for his army, at a point twenty-two miles below Pittsburg, on the banks of the Ohio, for the purposes of further recruiting and more thorough drilling, preparatory to the ultimate movement against the hostile Indians. Wayne's army was called the "Legion of the United States", sometimes "Wayne's Legions", being divided into four sub-legions, and officered by legionary and sub-legionary officers; hence, the name given to the ren-

dezevous was Legionville. Meanwhile, measures were adopted by Congress and ardently supported by the Executive, having in view the pacification of the hostile tribes of the North-West. Treaties of peace were formed with various tribes, and others attempted to be formed, but unsuccessful, so as to avoid, if possible, any further hostilities; but all these efforts were comparatively unavailing. Of the messengers of peace sent to the Indians, by the President, three at least were murdered while attempting to execute their pacific mission. One of them (Col. John Hardin) was mentioned, and details given in a previous paper; the others were Colonel Truman and Major Freeman, I believe, who left Fort Washington on their missions of friendship to the Indians, in the spring of 1792, the latter April 7th, the former May 22d. Four other embassies of peace were unsuccessful, although composed of the first men in the country, including Charles Carroll, Charles Thompson, Benjamin Lincoln, Beverly Randolph, Timothy Pickering, Rufus Putnam, John Heckewelder, and others. The two first-named, although favoring peace measures, declined to serve as Peace Commissioners.

On the 30th of April, 1793, General Wayne moved his legions from his winter quarters to the vicinity of Fort Washington, for the purpose of more thorough drilling, especially of the later recruits. His design was also to make roads and establish supply *depots* in the Indian country, if terms of peace could not be had. Meanwhile, recruiting progressed during the summer and early autumn.

On the 7th of October, the army of General Wayne took up the line of march northward, and arrived at a general encampment on the south-west branch of the Great Miami, six miles north of Fort Jefferson, on the 13th of the same month. Four days thereafter Lieutenant Lowry and ninety men, while escorting a train of military stores, consisting of twenty wagons, was attacked by a party of Indians, and defeated, with the loss of fifteen officers and privates, including the gallant Lieutenant. The savages also killed or carried off about seventy horses, but failed to destroy the wagons or possess themselves of the stores. Major Hamtramck had the command of four companies, and a small detachment of light infantry and dragoons, which served as an escort to the quartermaster-general's and contractor's wagons and pack-horses.

Before Christmas Gen. Wayne had erected Fort Greenville, on a tributary of the Great Miami river, on or near the site of the town of Greenville, now the county seat of Darke county, Ohio, where he put his army into winter quarters, after having discharged or dismissed the Kentucky militia, numbering a thousand men, under command of Gen.

Charles Scott—this being deemed prudent, as active movements on a large scale were impracticable in the winter season.

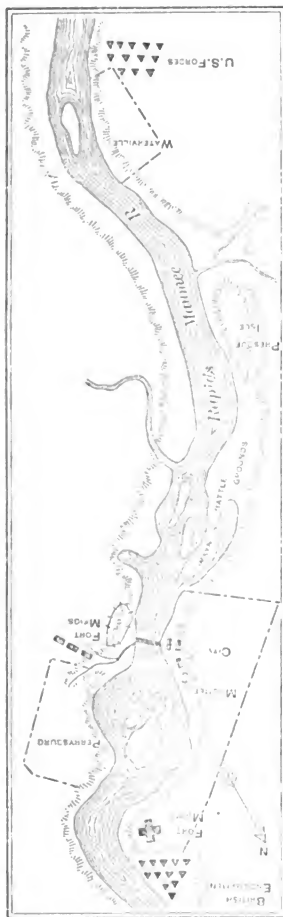

On the 24th of December, 1793, Gen. Wayne sent a detachment to take possession of the field of St. Clair's defeat, where they built Fort Recovery (now in Mercer county, Ohio), and garrisoned it with a force under command of Capt. Alexander Gibson.

During the early months of the year 1794, Gen. Wayne made thorough preparations for the fatal blow soon to be struck, unless the hostile tribes treated for peace. The Indians had hopes of British aid, which had been promised them, and continued rebellious, and even became defiant.

On the 30th of June, an unsuccessful attack was made by a force of more than a thousand warriors, led by the celebrated Miami Chief, Little Turtle, upon a detachment of one hundred and forty men, commanded by Major McMahon, near Fort Recovery. The fighting was kept up all day and a portion of the next, with very considerable loss to the enemy, who ultimately retreated with disgrace from the old battlefield where Gen. St. Clair had been defeated. The garrison at Fort Recovery aided in the discomfiture and humiliation of the Indians.

On the 25th of July, Gen. Charles Scott, with sixteen hundred mounted men from Kentucky, joined Wayne's legion at Fort Greenville, and their combined forces, numbering over three thousand men, moved forward on the 28th. On the 8th of August they arrived at the junction of the Auglaize and Maumee rivers, where they built Fort Defiance. Here Gen. Wayne made another fruitless effort to negotiate a peace with the enemy, by sending Christian Miller, who had been naturalized among the Shawanese, as a special messenger to offer terms of friendship; but the tender of the olive branch resulted in no good, it being met with prevarication or proposals for delay, with a view to the better concentration of their forces, or for some other advantages.

On the 18th of August the army encamped on the north bank of the Maumee, at a point about five miles above where Fort Meigs was erected, in 1813, and where is now situated Maumee city, in Lucas county, and Perrysburg, on the south bank of the river, in Wood county, Ohio. There they erected some light works as a place of deposit for their heavy baggage, which was named Fort Deposit. During the next day the army was engaged principally in completing and strengthening their works at this point. Early on the morning of the 20th of August, Wayne's Legions were put in motion to attack the hostile tribes (commanded by Blue Jacket, the celebrated Shawanese Chief), who were concentrated at the "Rapids of the Maumee," only three

EXPLANATION OF THE MAP OF THE BATTLE OF "FALLEN TIMBERS," ON THE MAUMEE RIVER.

The map shows about eight miles of the country along each side of the Maumee, including the present towns of Perrysburg, Maumee City and Waterville.

Just previous to the battle of "Fallen Timbers," says Howe, in August, 1794, Wayne's army was encamped a short distance above Waterville, the place being designated "U. S. Forces" on the map. The battle commenced near the place named "Presque Isle" on the map, and was chiefly fought below the Maumee Rapids, and above the point called "Fort Meigs," on the banks of the Maumee River. The routed Indians retreated down the river in the direction of Fort Miami and the British encampment, as shown on the map, on the west side of the Maumee.

miles below them, and on the same side of the river. The warriors, supposed to have been two thousand strong, were drawn up in three lines of battle, within supporting distance, and extended nearly two miles, at right angles from the river. The confederate warriors, secreted in the woods and high grass (a favorable covert for their mode of warfare), opened fire upon the advance of Wayne's army (a select battalion of mounted volunteers, commanded by Captain Price), while marching through a woods covered with old *fallen timbers*, probably of trees that went down before a tornado; hence, the name of the battlefield.

It was not long until the battle became general, Gen. Scott's mounted men moving upon the right flank of the enemy, the legionary cavalry upon their left, while the front line charged with trailed arms, and drove the Indians from their hiding-places at the point of the bayonet. Soon the enemy gave way, having no relish for the bayonet; and this horde of savages and their allies were driven more than two miles down the river, having abandoned themselves to flight and dispersion, accompanied with terror and dismay, leaving the victorious legions of "Mad Anthony" in full and quiet possession of the field of battle.

Major-General Charles Scott commanded the Kentucky troops, and was the second officer in rank in Wayne's army.

Brigadier-General Wilkinson commanded the right wing, and Major Hamtramck the left wing; Major Mills served as Adjutant-General. Captains De Butt and Lewis, and Lieutenant William H. Harrison, afterwards President of the United States, were General Wayne's aids, and deported themselves with great gallantry on the field, so that "their conduct and bravery excited the troops to press for victory." The General commanding, in his official report of the battle of "Fallen Timbers", remarked that "the bravery and conduct of every officer belonging to the army, from the generals down to the ensigns, merit his warmest approbation."

The loss sustained by Wayne's army was thirty-three killed, and one hundred wounded; among the former were five officers, among the latter nineteen. The loss of the Indians and white allies was doubtless much greater, as "the woods were strewed for a considerable distance with the dead bodies of Indians and their white auxiliaries (principally Canadians and Englishmen)". It has been stated that the white allies were armed with British muskets and bayonets. McKee and Elliott, the British emissaries, also Simon Girty, of infamous notoriety, it is generally supposed, were *at*, if not *in*, the battle of "Fallen Timbers." The stores, houses and property of Col. McKee, "the principal stimulator of the war",

as Gen. Wayne believed, were destroyed, or at least all found convenient, or near the battle-ground. General devastation and conflagration marked the track of the victorious army, on their return march to Fort Greenville. The official report states that "they laid waste the villages and cornfields for about fifty miles on each side of the Maumee, up to Fort Defiance, and that there remained yet many villages and a great quantity of corn to be consumed on the upper Maumee, and also upon the Auglaize, which it was promised should be destroyed in a few days."

On the 17th of September, Wayne's army reached the junction of the St. Mary's and St. Joseph's rivers (now Fort Wayne) where, by the 22d of October, they had erected a fort and garrisoned it with a detachment, under Major Hamtramck, who gave it the name of Fort Wayne. Before it was completed, the Kentucky volunteers were ordered to Fort Washington, where they were mustered out of the service and discharged. On the 28th of October, the main body of the legion marched from Fort Wayne to Greenville, where Gen. Wayne again established his headquarters.

The battle of "Fallen Timbers" terminated the hostile movements of the Indian tribes of the North-West, towards the white settlers on the frontiers, for a period of more than fifteen years. This decisive victory of General Wayne, over the Indians, upon the banks of the Maumee, was followed the next year by a treaty of peace, known as the "Treaty of Greenville", or "Wayne's treaty", as it is often called, which was agreed to at Fort Greenville, Gen. Wayne's head-quarters, on the 3rd of August, 1795, by the terms of which the Indian tribes that were parties to it, being twelve in number, pledged themselves "to bury the hatchet forever, and restore all captives." In the making of this treaty, Gen. Wayne represented the United States Government, and the Wyandots, Delawares, Shawanese, Miamis, Ottawas, Chippewas, Pottawattamies, Kickapoos, Kaskaskias, Weas, the Eel river tribe, and the Piankeshaws, were the confederated tribes that composed the party of the other part to the treaty in question. The "treaty of Greenville" was laid before the Senate of the United States December 9, 1795, and ratified on the 22d of the same month.

MAJOR JOHN FRANCIS HAMTRAMCK.

MAJOR HAMTRAMCK, who appears to a good advantage as one of Gen. Wayne's subalterns in the foregoing campaign to the Maumee, it may be well to state the fact, was of Canadian-French ancestry, and that he had rendered valuable services during the Revolutionary war, starting out as a Captain in the Continental army. In 1789, he became a Major

in the Regular Army, serving as such in the West. He was in the Harmar expedition. Col. Hamtramck was commissioned a Colonel in 1802, and died April 11, 1803. The editor of the Historical Record says, "he was buried in the grounds of St. Anne's Orphan Asylum, in Detroit", and that "a large slab of marble, with a long inscription, lies over his grave." He was an efficient officer, and an honorable, brave man.

GENERAL ANTHONY WAYNE.

GENERAL ANTHONY WAYNE was born in Chester county Pennsylvania, January 1, 1745. His father, born in Ireland, emigrated to Pennsylvania in 1722, and was frequently a member of the Provincial Legislature, and an officer in expeditions against the Indians. Anthony was educated, in part, at least, in Philadelphia. Mathematics, Mechanics, Optics, and Astronomy, were among his favorite studies. He became a surveyor, and was engaged in that pursuit a number of years. He was elected to several county offices, and in 1774 "he was one of the provincial deputies who met in Philadelphia to deliberate upon existing troubles." He was also elected a member of the Convention, and of the Legislature. In 1775, he was associated with Dr. Franklin, and others, on the Committee of Safety. Before the close of this year he had raised a regiment for immediate service, and as its commander he joined General Sullivan for duty in Canada. He was in the engagement at "Three Rivers"—had command of five regiments at Ticonderoga and Mount Independence, until May, 1777, when he was ordered to join General Washington, in New Jersey, and assisted in driving the enemy from that province. He was in command, as Brigadier-General, of 1500 men, and was defeated, near Paoli, by a superior force. General Wayne led the attack of the American right wing at the battle of Germantown, and rendered much efficient service to the American cause, in various ways, especially in the battle of Monmouth. The storming of Stony Point, a fortification of great strength, on the Hudson, by General Wayne, on the night of July 15, 1779, was one of the most brilliant affairs of the war, and, says the American Cyclopaedia, "for desperate daring has never been excelled." His services continued to be in the highest degree valuable until the close of the Revolutionary struggle. After the surrender of Cornwallis, in October, 1781, General Wayne was assigned to the command in Georgia, and succeeded in driving the enemy from that State. After the war closed, he remained in Georgia, and was a member of the Constitutional Convention of the State, and also served, for a short time, as a member of Congress.

General Wayne has been justly regarded as one of the most brilliant

and dashing officers of the Revolutionary War. As says the authority quoted above, "he was brave to a fault, yet discreet and cautious, fruitful in expedients, quick in detecting the purpose of an enemy, instant in decision, and prompt in execution. In person he was rather above the medium height, his features were regular, and his face decidedly handsome. His dress was scrupulously neat and elegant, his movements were quick, and his manners easy and graceful."

General Wayne died at Presque Isle, now Erie, Pennsylvania, while on his way from Detroit to Philadelphia, December 14, 1796, a few days before he was fifty-one years of age. His body was interred, at his own request, under the flag-staff of the fort, on the shore of Lake Erie, but was removed by his son, Col. Isaac Wayne, in 1809, to Radnor church-yard, near the place of his birth, in Delaware county, Pennsylvania, where an elegant monument was erected, in honor of the patriot hero, by the Pennsylvania Cincinnati Society.

All honor to the memory of the hero of Stony Point, of Monmouth, of Germantown, of Brandywine, and to the conqueror of the Indians at "the battle of Fallen Timbers," on the Maumee!

SUMMARY
OF THE
PROCEEDINGS
OF THE
ELECTORAL COLLEGE OF OHIO.

SUMMARY OF THE PROCEEDINGS

OF THE

ELECTORAL COLLEGE OF OHIO.

(Certificates of election, receipts of certificates, etc., omitted.)

PRESIDENTIAL ELECTORS OF OHIO FOR 1880.*

Name.	Residence.
Sidney S. Warner.....	Wellington.
Charles H. Grosvenor.....	Athens.
Anthony D. Bullock.....	Cincinnati.
Alfred T. Goshorn.....	Cincinnati.
Robert E. Doan.....	Wilmington.
William Allen.....	Greenville.
Jacob L'H. Long.....	Ottawa.
Octavius Waters.....	Delta.
William W. McKnight.....	Georgetown.
John Q. A. Campbell.....	Bellefontaine.
George W. Holland.....	Richwood.
Jacob F. Burket	Findlay.
Nelson B. Sisson.....	Pine Grove.
George E. Martin.....	New Straitsville.
Mendal Churchill.....	Zanesville.
Jacob Scroggs.....	Bucyrus.
Tobias A. Plants.....	Pomeroy.
John Milton Lewis.....	Barnesville.
Nathan B. Billingsley.....	New Lisbon.
Nathaniel W. Goodhue.....	Akron.
Samuel R. House.....	Painesville.
Joel W. Tyler	Cleveland.

*For complete list of Presidential Electors of Ohio prior to 1880, see "Ohio Statistics," 1877, pp. 67-68.

STATE OF OHIO, EXECUTIVE DEPARTMENT,
COLUMBUS, December 1, 1880.

I, Charles Foster, Governor of the State of Ohio, do hereby certify that, on the 17th day of November, 1880, in pursuance of section 2970 of the revised statutes of said State, I transmitted by mail, to each person elected to the office of Elector of President and Vice President of the United States, on behalf of the said State, at an election held in the several election precincts thereof, in pursuance of law, on the 2d day of November, 1880, a certificate of the election of said persons to said

office, and that each of said Electors acknowledged, by mail, the receipt of said certificate, which acknowledgments are on file in this department.

[SEAL.] In testimony whereof, I have hereunto subscribed by name,
and caused the Great Seal of the State of Ohio to be affixed, at
Columbus, the day and year first above written.

(Signed)

CHARLES FOSTER.

By the Governor.

(Signed)

MILTON BARNES,
Secretary of State.

PROCEEDINGS OF AN INFORMAL MEETING OF THE ELECTORS.

GOVERNOR'S ROOM, STATE CAPITOL,

COLUMBUS, O., *November 30, 1880.*

The Electors chosen at the election held November 2, 1880, met as above.

On motion of Elector S. R. House, Elector Nathaniel W. Goodhue was chosen President; and on motion of Elector Anthony D. Bullock, Elector John Q. A. Campbell was chosen Secretary.

At the suggestion of the President, the minutes of the meeting of the Electoral College in December, 1876, were read.

On motion of Elector Jacob L'H. Long, a committee on Rules and Order of Business was appointed by the President, as follows: Electors Jacob L'H. Long, Joel W. Tyler, Charles H. Grosvenor, Alfred T. Goshorn and Robert E. Doan.

On motion, the President appointed a committee on Organization, as follows: Electors Nathan B. Billingsley, Jacob Scroggs and Anthony D. Bullock.

On motion, the President appointed a committee on per diem and mileage, as follows: Electors Sidney S. Warner, William W. McKnight and John Milton Lewis.

On motion of Elector Alfred T. Goshorn, the meeting adjourned to meet at the Governor's office Wednesday, December 1, 1880, at a quarter of nine o'clock A.M.

GOVERNOR'S ROOM, STATE CAPITOL,

COLUMBUS, O., *December 1, 1880, 8:45 o'clock A.M.*

The Electors met. The roll being called, all the Electors were found to be present.

The minutes of the informal meeting held November 30, 1880, were read and approved.

The committee on Rules and Order of Business reported the following order of business as a suggestion to the College on its regular meeting :

Your committee beg leave, by way of preliminary report, to suggest that they have carefully examined the statutes of the United States and of the State of Ohio governing the action of Electoral Colleges, and that the following is the order of procedure which those statutes seem to require prior to the time when the Electoral College will be so far organized as to be competent to adopt rules for its guidance :

First—Calling the roll of the Electors.

Second—Administering the oath of office to the Electors present.

Third—Temporary organization of Electors present.

Fourth—Filling vacancies.

Fifth—Appointment of committees :

1. On rules and order of business.

2. On permanent organization.

3. On per diem and mileage.

Sixth—Permanent organization.

The hour having arrived for the meeting and organization of the Electoral College, this meeting adjourned.

(Signed)

NATHANIEL GOODHUE, *President*,
JOHN Q. A. CAMPBELL, *Secretary*.

GOVERNOR'S OFFICE, STATE CAPITOL,
COLUMBUS, OHIO, *December 1, 1880, 9 o'clock A.M.*

At 9 o'clock A.M., the following Electors met, agreeable to statute, and answered to a call of the roll, to wit: Sidney S. Warner, Charles H. Grosvenor, Alfred T. Goshorn, Anthony D. Bullock, Robert E. Doan, William Allen, Jacob L'H. Long, Octavius Waters, William W. McKnight, John Q. A. Campbell, George W. Holland, Jacob F. Burket, Nelson B. Sisson, George E. Martin, Mendal Churchill, Jacob Scroggs, Tobias A. Plants, John Milton Lewis, Nathan B. Billingsley, Nathaniel W. Goodhue, Samuel R. House, and Joel W. Tyler.

Hon. George W. McIlvaine, Chief-Justice of the Supreme Court of the State of Ohio, then administered the oath of office to said Electors.

On motion, Elector Nathaniel W. Goodhue was chosen temporary President of the College, and Elector John Q. A. Campbell was chosen temporary Secretary.

On motion, Electors Jacob L'H. Long, Joel W. Tyler, Charles H. Grosvenor, Alfred T. Goshorn, and Robert E. Doan, were appointed a committee on Rules.

The committee on Rules reported as follows :

To the Electoral College of the State of Ohio for the year 1880 :

Your committee beg leave to recommend for your adoption the following rules:

Rule 1. The officers of the College shall consist of a President and Secretary, to be elected by a majority of the College.

Rule 2. At 12 o'clock, meridian, on Wednesday, December 1, 1880, the Electors shall meet in the Senate Chamber, at the State House, in Columbus, and, on being called to order by the President, the roll shall be called by the Secretary.

Rule 3. The President shall appoint two tellers to collect and count the ballots of the Electors for President and Vice-President of the United States.

Rule 4. The Electors shall then proceed to cast their ballots:

First—For President of the United States, for four years, commencing March 4th, 1881.

Second—For Vice-President of the United States, for four years, commencing March 4th, 1881.

The ballots being counted, the result of each ballot shall be announced by the President.

As soon as may be, thereafter, three certificates of all the votes cast for President and for Vice-President, upon distinct lists, shall be made out, and signed by all the Electors, in the order of the districts as numbered, commencing with the Electors-at-large, to each of which certificates shall be attached one of the certified lists of the Electors, which was furnished to the Electors by the Governor of the State, and, in case a vacancy has occurred in the Electoral College, there shall also be attached thereto a copy of the proceedings of the Electors by which such vacancy was filled, duly certified and signed by all of the Electors who were competent at the commencement of the session of the Electoral College, and accompanied by an authenticated copy of the law authorizing the filling of the vacancy. The three certificates so authenticated shall then be sealed for transmission, and duly certified and signed by the Electors in the order above described, on the outside.

Rule 5. The Electors shall then select, by lot, one of their number to take charge of and deliver to the President of the Senate of the United States, at Washington, D. C., one of the said certificates, and another of their number to take charge of and deliver to the Judge of the District Court of the United States for the Southern District of Ohio, another of said certificates; and thereupon said Electors shall, in writing, under their hands, or under the hands of a majority of them, appoint the persons so selected, respectively, the one to take charge of and deliver to the President of the Senate of the United States, at Washington, D. C., one of the said certificates, and the other to take charge of and deliver to the Judge of the District Court of the United States for the Southern District of Ohio, another of said certificates, before the first Wednesday in January, 1881; and the said certificates shall then be delivered to the said messengers for transmission and delivery aforesaid, and at the same time there shall be delivered to the said messengers their respective appointments, in writing, as such messengers, duly signed, as above set forth.

Rule 6. The third certificate of all the votes cast for President and Vice-President shall be delivered to the President of the Electoral College, to be by him transmitted, by mail, to the President of the Senate of the United States, at Washington, D. C., before the first Wednesday in January, 1881.

Rule 7. The manner of selecting the messengers provided for in Rule 5, shall be as follows: Twenty-two cards shall be placed in envelopes, which envelopes shall be placed in a hat; on one of said cards shall be written the words "Messenger for Washington", on another the words "Messenger to District Judge"; the balance shall be blank. The envelopes shall then be shuffled thoroughly by the Governor. The roll of the Electors shall then be called by districts, beginning with the Electors-at-large, and as the name of each Elector is called, he shall draw from the hat one envelope, and the Electors who drew the cards containing the words above named, shall be selected as the respective messengers thereon designated.

Rule 8. The Secretary shall furnish to the Governor of the State a complete copy of the record proceedings of this Electoral College, to be recorded in the record book of the State, entitled "Proceedings of Electoral Colleges", together with all of the papers and certificates necessary to show the legality and validity of the organization of the College, in the order in which they may be arranged by the Secretary.

On motion, Electors Nathan B. Billingsley, Jacob Scroggs and Anthony D. Bullock, were appointed a committee on Permanent Organization. The committee on permanent organization made the following report, viz.:

For permanent President of the Electoral College of Ohio, Hon. Nathaniel W. Goodhue, of Akron.

For permanent Secretary of the Electoral College of Ohio, Hon. John Q. A. Campbell, of Bellefontaine. Adopted.

On motion, Electors Sidney S. Warner, Wm. W. McKnight and John Milton Lewis were appointed a committee on per diem and mileage.

The committee on Per Diem and Mileage submitted their report, which was adopted.

(The report in detail and certificates thereto are omitted).

On motion, the Secretary was authorized to employ an Assistant Secretary, and Wilson O. Tolford, of Columbus, was employed by the Secretary as such assistant.

On motion, Silas N. Field, of Columbus, was chosen Sergeant-at-Arms of the College.

Elector John Q. A. Campbell was selected by lot, agreeably to rule 7th, as Messenger to carry the certificate of the votes of the College to the President of the Senate at Washington, D. C.

On motion, the College took a recess, to meet at 12 o'clock noon to-day, at the State House, in the Senate Chamber in Columbus, Ohio.

STATE HOUSE, "SENATE CHAMBER,"

COLUMBUS, O., *December 1, 1880.*

The Electoral College convened at 12 o'clock M.

The roll was called, and all of the Electors were found present.

A ballot for President of the United States, for the term of four years from the fourth of March, 1881, was then ordered and taken. Electors. Mendal Churchill and Tobias A. Plants were appointed Tellers.

The ballot resulted as follows:

James A. Garfield, of Ohio, received twenty-two (22) votes for President of the United States, as per certificate of the Tellers below.

A ballot for Vice-President of the United States, for the term of four years from the fourth of March, 1881, was ordered and taken. Electors George E. Martin and George W. Holland were appointed Tellers.

The ballot resulted as follows:

Chester A. Arthur, of New York, received twenty-two (22) votes for Vice-President of the United States, as per certificate of the Tellers below.

The three certificates of the votes cast for President and Vice-President were then signed by all of the Electors and sealed.

(Poll-book, certificates, endorsements thereon, and certificates of messengers' appointments omitted herein).

Elector John Q. A. Campbell was appointed Messenger to carry and deliver to the President of the Senate at Washington, D. C., one certificate of the votes of the Electoral College for President and Vice-President of the United States, previous to the first Wednesday in January, 1881; and Elector Anthony D. Bullock was appointed Messenger to carry and deliver to the Judge of the District Court of the United States for the Southern District of Ohio, one certificate of the votes of the Electoral College for President and Vice-President of the United States.

One of said certificates, together with a certified list of the Electors, given under the hand of the Governor of the State, and of the seal of the State of Ohio, was delivered to said Elector John Q. A. Campbell, one to said Elector Anthony D. Bullock, and one to Elector Nathaniel W. Goodhue, President of the Electoral College, all duly signed and sealed.

The Electors each signed the certificate of Elector John Q. A. Campbell as Messenger to the President of the Senate, and of Elector Anthony D. Bullock as Messenger to the Judge of the District Court of the Southern District of Ohio.

Elector Doan offered the following resolution, which was adopted:

Resolved, That the President of this Electoral College be requested to telegraph to General James A. Garfield that the Electoral College of Ohio has cast twenty-two Electoral votes for him for President of the United States, and that he telegraph

to General Chester A. Arthur that the Electoral College of Ohio has cast twenty-two votes for him for Vice-President of the United States.

The thanks of the College were extended by formal vote to Elector Nathaniel W. Goodhue, President, and Elector John Q. A. Campbell, Secretary of the Electoral College, for their faithfulness, ability and courtesy, shown in the discharge of their respective duties; also, to Silas N. Field, Sergeant-at-Arms, for his faithfulness in the discharge of his duties.

The thanks of the College were also unanimously voted to Governor Charles Foster and his Secretaries, E. T. Hall and F. D. Mussey, for courtesies extended.

Elector John Q. A. Campbell offered the following resolution, which was adopted :

Resolved, That we recommend, for the convenience and guidance of future Electoral Colleges, that all blank formulas and papers required for the transaction of the business of the Electoral College should be prepared by the proper State authorities, previous to the meeting of said College.

A motion was passed, authorizing the President and Secretary of the College to certify to the Auditor of State, authorizing him to issue orders on the State Treasury in favor of Wilson O. Telford for recording the proceedings and papers connected with the meeting of this Electoral College to the amount of thirty-two dollars (\$32), and in favor of Silas N. Field, for services as Sergeant-at-Arms to the amount of five dollars (\$5.00).

On motion, the College adjourned *sine die*.

(Signed)

NATHANIEL W. GOODHUE,

President Electoral College.

(Signed) JOHN Q. A. CAMPBELL,

Secretary.

DEPARTMENT OF STATE.

BUREAU OF STATISTICS.

STATISTICAL REPORT

OF THE

SECRETARY OF STATE,

TO THE

General Assembly of Ohio,

FOR THE YEAR 1880.

OFFICE OF THE SECRETARY OF STATE,

COLUMBUS, OHIO, *January 5, 1881.*

To the General Assembly of Ohio:

In compliance with the statute, which provides that it shall be the duty of the Secretary of State, annually, to prepare, from the official reports and from whatever other reliable sources to which he may obtain access, as full, accurate, and intelligible tables of the statistics of the State as may be in his power, and report the result of his labors to the General Assembly at its next meeting, I have the honor herewith to submit my third annual report, being for the year ending November 15, 1880.

Very respectfully,

Your obedient servant,

MILTON BARNES,

Secretary of State.

STATISTICS.

BY N. S. TOWNSHEND, M.D.

(Prepared for the Annual Report of the Secretary of State.)

It is believed to be important that many more of our citizens should have a good understanding of the nature, and of the uses of statistics, and of the means necessary for obtaining reliable statistical information. Participating in this belief, it is the writer's purpose to discuss very briefly some two or three elementary questions pertaining to the subject.

1st. *What are we to understand by the term statistics?*

Worcester's Dictionary defines the word to mean "a collection of facts relating to a part, or the whole of a country or people, especially those facts which illustrate its physical, social, moral, intellectual, political, industrial, and economic condition, and which admit of numerical statement and arrangement in tables;" again, it says, "the science of statistics embraces a very wide range of facts relating to population, deaths, births, marriages, health, disease, and duration of life, wealth, agriculture, manufactures, commerce, the arts, and all other industrial interests and pursuits, financial, military, and other national resources, education, literature, science, religion, government, legislation, crime, and civil and criminal jurisprudence."

The multitude of facts embraced by the term *statistics* as thus defined are commonly classed as industrial, social, and vital statistics. The first of these classes, industrial or economic statistics, includes whatever belongs to labor in all its forms, its materials, products, or rewards, agriculture, mining, manufactures, commerce, and their various agencies, such as ships, railroads, telegraphs, steam, wind, water, and animal and human forces. Social statistics includes what specially belongs to man in his relations to his fellows, and to the State; in short, all that pertains to character in its various manifestations in manners, customs, habits; in the family, in educational, religious, and political organizations. Under the head of vital statistics is included whatever affects the health and life of the individual or of the race, whether dependent on character, occupation, habits, location, or inherit-

ance. The decennial reports of the United States Census Bureau afford a large amount of material in all of the above-named divisions. The volume of Ohio statistics, annually reported to the General Assembly of Ohio by the Secretary of State, is especially instructive to citizens of Ohio, and deserves to be much more highly appreciated.

2d. *What valuable use can be made of such facts?*

Facts carefully observed, faithfully recorded, and conveniently arranged and tabulated are the safest guide of the activities of an individual, or of a people. For example, a farmer from some cause becomes dissatisfied with his location, or it may be with his occupation; an hour's study of industrial statistics will show him what prospect he has of bettering his condition by a change of place, or of vocation. Or he may wish to learn the last year's production and present supply of different farm products; by the study of reliable statistics, he soon determines when to sell, or on which to bestow in future the largest amount of labor and care. So the manufacturer, after an examination of statistical tables, readily sees where the raw material, which he uses, is especially abundant, or what locality will secure for him the desired proximity to a good market.

A man with capital may have a motive for settling in a particular place; before deciding, he will consult the statistics of the region, and soon be able to determine whether it has natural facilities for business sufficient to make money in demand. A capitalist may be invited to invest in some enterprise, but, as the holder of money is proverbially cautious, before a dollar will be forthcoming the map and statistics of the vicinity will be thoroughly canvassed. Business men are not satisfied with mere opinions or loose estimates; they want the figures, for, as they have come to believe, "figures won't lie"; and they do not when sufficient care has been taken to put them where they belong.

The statesman, desiring to promote the good order and prosperity of a people, sees that these desirable conditions depend for their cause upon intelligence, industry and self-control on the part of individuals. Therefore, facts and figures, which show from time to time the progress of the people in these respects, he will watch as anxiously as the physician watches the pulse of his patient.

On all such questions as education, pauperism, crime, taxation or property he will especially need the facts. The physician, as he carefully studies his tables of vital statistics, sees what are the special dangers to which the health of his patrons is exposed, whether they come from contagion, climatic conditions, or unsanitary modes of living; he governs himself accordingly, and is enabled to benefit society as much by the prevention as by the cure of disease. Life

insurance associations, which are a great benefit when honestly and ably conducted, by paying close attention to vital statistics, are enabled to calculate life risks with wonderful precision.

In addition to the safe-guide to action afforded by a careful consideration of all related facts, it may not be amiss to suggest that much noisy dispute, and much of the strife growing out of differences of opinion might be avoided if men would take more pains to get at real facts. Then, if they would adopt the rule of judging, supplied by one of the world's great teachers, "by their fruits ye shall know them"; how much argument and dispute would be rendered unnecessary instead of a *priori* judgment, how far preferable in many cases are the judgments based on accumulated facts and on the experience of a whole people. An old adage says, "facts are stubborn things"; oftentimes, indeed, they are too stubborn to accommodate themselves to our pet theories; in such cases, however, the happy alternative is left us of accommodating our theories to the facts. Without facts the mind is like a rudderless ship, liable to be "blown about by every wind of doctrine."

3d. *How may reliable statistics be obtained?*

To obtain statistical information of the highest reliability and value, it is essential that the record be complete, carefully and impartially made, and conveniently arranged. To insure this, the provision for collecting and tabulating facts must be ample and properly arranged in detail, and fairly compensated. The perfection or imperfection of national or State provision for obtaining full and accurate statistics may be considered as affording a fair test of the progress made by a people, and of the intelligence of their rulers. In Ohio the legal provisions for collecting and reporting facts in the several classes of industrial, social and vital statistics are thought, by competent judges, to be adequate if faithfully carried into effect. There seems, however, to be reason to suppose, that many officers charged with the duty of collecting facts, either do not fully understand the importance of accuracy, or are remiss in the discharge of duty. It would also appear that some of those, whose duty it is to see that the laws are properly carried into effect are equally remiss, probably, not sufficiently realizing that it is not guesses nor estimates that are wanted, but the actual facts.

It is exceedingly desirable that the people of the State should better appreciate the value of full and correct statistical returns, and that they should cheerfully work in accord with the officers charged with this service. It is a lamentable fact, that in some portions of the State

there is great indifference shown in regard to the information sought through the blanks left by assessors. There is reason for believing that many persons fill these blanks with loose estimates or even rough guesses, instead of carefully ascertained facts, based upon actual accounts. Is it not desirable that every intelligent citizen of the State should give some attention to the subject, and take pains to encourage accuracy and fidelity in furnishing statistical information.

SCHOOL STATISTICS

COLLATED FROM THE TWENTY-SEVENTH ANNUAL REPORT OF J. J. BURNS, STATE COMMISSIONER OF COMMON SCHOOLS.

The following compilation is a summary of the leading facts shown in the annual report:

Number of youth of school-age in the State in September, 1879	1,043,320
“ “ “ “ 1880	1,046,225
Number of school districts in the State.....	2,030
Number of sub-districts in township districts.....	10,872
Number of school-houses in township districts.....	10,888
Number of school-houses in other districts.....	1,255
Number of school-houses erected within the year	442
Cost of school-houses erected within the year	\$711,835 00
Estimated value of school-houses, including ground	\$21,851,718 00
Number of teachers necessary to supply schools.....	16,627
Number of different teachers actually employed.....	23,684
Average number of weeks the schools were in session.....	30
Number of pupils enrolled in the schools	747,138
Average number of pupils in daily attendance.....	476,279
Number of school officers	51,711
Total receipts, including balance on hand Sept. 1, 1879.....	\$11,075,646 97
Total expenditures.....	\$7,704,448 85

GENERAL TABULAR STATEMENTS AND COMPARISONS.

RECEIPTS.

Receipts from interest on irreducible school funds, as reported by Auditor of State	\$226,311 45
From rents and accrued interest on deferred payments due on sale of school lands.....	19,433 06
The aggregate amount from the latter source in 1879 was	21,021 62
Balance on hand September 1, 1879.....	3,549,422 51
From State school tax (one mill on each dollar of taxable property) in 1880	1,558,207 32
From same source in 1879.....	1,543,908 84
Increase	\$14,298 48
From interest on irreducible funds and rents of school lands in 1880...	\$245,744 51

From local taxes in 1880.....	\$5,155,878 47
From sale of bonds in 1880.....	340,804 75
From fines, licenses, etc., in 1880	225,589 41
Total receipts in 1880	\$7,526,224 46
Grand total of receipts in 1880, including balance on hand September 1, 1879	\$11,075,646 97
Grand total of receipts in 1879, including balance on hand September 1, 1878	11,243,210 38
Decrease	\$167,563 41

EXPENDITURES.

Amount paid teachers in primary schools in 1880.....	\$4,530,183 46
“ “ high schools in 1880	442,358 18
Total amount paid teachers in 1880	\$4,972,541 64
Amount paid for superintending schools in 1880.....	141,681 30
Amount paid for sites and buildings in 1880	798,736 18
Amount paid for interest on and redemption of bonds 1880.....	537,485 99
Amount paid for fuel and contingent expenses in 1880.....	1,254,003 74
Grand total expenditures in 1880.....	\$7,704,448 85
“ “ 1879.....	7,711,325 24
Decrease	\$6,876 39
Balance on hand September 1, 1880.....	\$3,371,198 12

ENUMERATION OF YOUTH.

Number of white male youth of school-age in September, 1880.....	522,536
Number of white female youth of school age in September, 1880.....	500,035
Whole number of white youth of school age in September, 1880	1,022,571
Number of colored male youth of school age in September, 1880.....	11,941
Number of colored female youth of school age in September, 1880	11,713
Whole number of colored youth of school age in September, 1880	23,654
Whole number of male youth of school age in September, 1880.....	534,477
Whole number of female youth of school age in September, 1880.....	511,748
Whole number of youth of school age in September, 1880	1,046,225
“ “ “ 1879.....	1,043,320
Increase	2,905

The whole number of unmarried youth, between sixteen and twenty-one years of age, in the State in September, 1880, as shown by the enumeration, is 261,189, or 24.96 per cent. of the entire enumeration. This leaves youth in the State between six and sixteen years of age, 785,036.

In 1879 the whole number of unmarried youth in the State, between sixteen and twenty-one years of age, was 26.19 per cent.; in 1878, 26.19 per cent.; in 1877, 26.27 per cent.; in 1876, 25.51 per cent.; in 1875, 25.60 per cent.; in 1874, 24.68 per cent.; and in 1873, 23.89 per cent. of the entire enumeration.

SCHOOL DISTRICTS AND THEIR SUBDIVISIONS.

Number of township districts in 1880	1,346
Number of sub-districts in township districts in 1880	10,872
Number of city, village, and special districts in 1880	684
Number of district divisions included in city, village and special districts in 1880	753

SCHOOL-HOUSES ERECTED WITHIN THE YEAR.

Number of school-houses erected in township districts in 1880	402
Number of school-houses erected in city, village and special districts in 1880	40
Whole number of school-houses erected in 1880.....	442

An increase of thirty-two in the number of school-houses erected in township districts was reported in 1873; an increase of thirty in 1874; a decrease of forty in 1875; a decrease of nine in 1876; a decrease of twenty-one in 1877; a decrease of five in 1878; a decrease of forty-two in 1879, and an increase of two in 1880.

In city, village, and special districts, an increase of eight in 1873; an increase of seven in 1874; an increase of five in 1875; an increase of fourteen in 1876; a decrease of thirty-eight in 1877; a decrease of four in 1878; a decrease of two in 1879, and an increase of three in 1880—making an increase of five in the State for the year just named.

COST OF SCHOOL-HOUSES ERECTED WITHIN THE YEAR.

Cost of school-houses erected in township districts in 1880.....	\$369,498
“ “ “ 1879.....	351,627
Increase	\$17,871
Cost of school-houses erected in city, village and special districts in 1880...	\$342,337
“ “ “ 1879...	229,174
Increase	\$113,163

Whole cost of school-houses erected in 1880.....	\$711,835
“ “ “ 1879.....	580,801
Increase	<u>\$131,034</u>

The expenditure for building purposes was: In 1870, \$1,391,597 ; in 1871, \$1,025,077; in 1872, \$893,422; in 1873, \$1,008,786; in 1874, \$1,164,104; in 1875, \$1,010,786; in 1876, \$1,159,350; in 1877, \$803,146; in 1878, \$843,822; in 1879, \$580,801, and 1880, \$711,835.

NUMBER OF SCHOOL-HOUSES IN THE STATE.

Number of school-houses in township districts in 1880.....	10,888
Number of school-houses in city, village and special districts in 1880	1,255
Whole number of school-houses in 1880.....	<u>12,143</u>

VALUE OF SCHOOL-HOUSES, INCLUDING GROUNDS.

Value of school-houses in township districts in 1880.....	\$8,362,073
Value of school-houses in city, village and special districts in 1880.....	13,489,645
Total value of school-houses in 1880.....	<u>\$21,851,718</u>

SCHOOL-ROOMS.

Number of primary school-rooms in township districts in 1880.....	11,288
Number of high school-rooms in township districts in 1880.....	24
Whole number of school-rooms in township districts in 1880.....	11,312
Number of primary school-rooms in city, village and special districts in 1880	4,392
Number of high school-rooms in city, village and special districts in 1880.....	543
Whole number of school-rooms in city, village and special districts in 1880	<u>4,935</u>
Grand total of school-rooms in State in 1880	<u>16,247</u>

NUMBER OF SCHOOL OFFICERS.

Number of directors in township sub-districts.....	32,616
Number of directors, members of township district boards.....	10,872
Number of clerks of township district boards.....	1,346
Number of treasurers of township district boards	1,346
Members of city, village and special district boards (probable)	4,000
County, city, village and special district treasurers not members, etc., (probable)	500
City and village district examiners (probable).....	500
County examiners.....	264

State examiners.....	3
Probate judges	88
County auditors.....	88
Prosecuting attorneys	88
Total	<u>51,711</u>

NUMBER OF TEACHERS NECESSARY TO SUPPLY THE SCHOOLS.

Number necessary to supply the schools in township districts in 1880.....	11,439
Number necessary to supply the schools in city, village, and special districts in 1880	5,188
Total number necessary to supply all the common schools in 1880...	<u>16,627</u>

NUMBER OF DIFFERENT TEACHERS EMPLOYED.

Number of teachers employed in township district primary schools—	
Gentlemen—In 1880	9,949
Ladies—In 1880.....	8,244
Number of teachers employed in township district high school—	
Gentlemen—In 1880.....	23
Ladies—In 1880.....	6
Number of teachers employed in city, village, and special district primary schools—	
Gentlemen—In 1880.....	888
Ladies—In 1880.....	3,906
Number of teachers employed in city, village, and special district high schools—	
Gentlemen—In 1880.....	466
Ladies—In 1880.....	203
Total number of teachers employed in city, village, and special district schools—	
Gentlemen—In 1880.....	1,354
Ladies—In 1880.....	4,108
Whole number of teachers employed in primary schools—	
Gentlemen—In 1880.....	10,837
Ladies—In 1880.....	12,149
Whole number of teachers employed in high schools—	
Gentlemen—In 1880.....	489
Ladies—In 1880.....	209
Total number of teachers employed in the State—	
Gentlemen—In 1880.....	11,326
Ladies—In 1880.....	<u>12,358</u>

SUPERVISION.

Number employed to superintend township districts in 1880.....	16
Number employed as superintendents in city, village, and special districts in 1880	257

AVERAGE MONTHLY WAGES OF TEACHERS.

Average monthly wages of teachers in township district primary schools—	
Gentlemen—In 1880.....	\$34 00
Ladies—In 1880.....	23 00
Average monthly wages of teachers in township district high schools—	
Gentlemen—In 1880.....	\$57 00
Ladies—In 1880.....	29 00
Average monthly wages of teachers in city, village, and special district primary schools—	
Gentlemen—In 1880.....	\$60 00
Ladies—In 1880.....	42 00
Average monthly wages of teachers in city, village, and special district high schools—	
Gentlemen—In 1880.....	\$74 00
Ladies—In 1880.....	63 00

AVERAGE NUMBER OF WEEKS THE SCHOOLS WERE IN SESSION.

Average number of weeks the primary schools were in session in township districts in 1880.....	28
Average number of weeks the high schools were in session in township districts in 1880.....	23
Average number of weeks the primary schools were in session in city, village, and special districts in 1880.....	37
Average number of weeks the high schools were in session in city, village, and special districts in 1880.....	36
Average number of weeks the common schools were in session in the State in 1880.....	30

AVERAGE RATE OF LOCAL TAX FOR COMMON SCHOOLS.

Average number of mills on each dollar, local levy, for schools in township districts in 1880.....	3.20
Average number of mills on each dollar, local levy, for schools in township district in 1879.....	3.10
Increase.....	.10
Average number of mills on each dollar, local levy, for schools in city, village, and special districts in 1880.....	5.70
Average number of mills on each dollar, local levy, for schools in city, village, and special districts in 1879.....	6.20
Decrease.....	.50

NUMBER OF PUPILS ENROLLED IN THE COMMON SCHOOLS.

Total number of pupils enrolled in the common schools of the State—

Boys—In 1880, 391,531; in 1879, 387,065: Increase.....	4,466
Girls— “ 355,607; “ 347,586: Increase.....	8,021
Total— “ 747,138; “ 734,651: Increase.....	12,487

AVERAGE DAILY ATTENDANCE.

Average daily attendance of pupils in the common schools of the State—

Boys—In 1880, 244,386; in 1879, 237,759: Increase.....	6,627
Girls— “ 231,893; “ 222,231: Increase.....	9,662
Total— “ 476,279; “ 459,990: Increase.....	16,289

Per cent. of average daily attendance on enrollment in the State in 1880	65.28
“ “ “ “ “ 1879	64.05
Increase	1.23

COLORED SCHOOLS.

Total number of teachers in colored schools of Ohio in 1880.....	225
“ “ “ “ 1879.....	238
Decrease	13

Total number of pupils enrolled in colored schools in the State in 1880	9,511
“ “ “ “ “ 1879	9,481
Increase	70

PRIVATE SCHOOLS.

Total number of pupils enrolled in private schools in the State in 1880	28,650
“ “ “ “ “ 1879	28,861
Decrease	211

COST OF EDUCATION FOR THE YEAR.

Total and average cost.	1880.	1879.
In township districts, total cost, including 6 per cent. on amount paid on permanent property.....	\$3,493,674 47	\$3,565,749 54
In city, village and special districts, total cost, including 6 per cent. on amounts paid on permanent property ..	4,185,655 29	4,008,549 39
In township districts, average cost per pupil enrolled on year's expenditure, net, including 6 per cent. on permanent property.....	7 36	7 51
In township districts, average cost per pupil enrolled on year's expenditure, exclusive of 6 per cent. on permanent property	6 30	6 49
In city, village and special districts, average cost per pupil enrolled on year's expenditure, net, including 6 per cent. on permanent property.....	12 39	15 03
In city, village and special districts, average cost per pupil enrolled on year's expenditure, net, exclusive of 6 per cent. on permanent property.....	11 69	12 41
In township districts, average cost per capita of the average daily attendance, including 6 per cent. on permanent property.....	7 33	2 92
In city, village and special districts, average cost per capita of the daily attendance, including 6 per cent. on permanent property	8 78	21 23
In township districts, expenditure per capita of the population between 6 and 16 years of age, including 6 per cent. on permanent property	8 06	7 08
In township districts, expenditure per capita of population between 6 and 16 years of age, exclusive of 6 per cent. on permanent property	6 91	6 12
In city, village and special districts, expenditure per capita of population between 6 and 16 years of age, including 6 per cent. on permanent property	12 42	15 07
In city, village and special districts, expenditure per capita of population between 6 and 16 years of age, exclusive of 6 per cent. on permanent property.....	10 02	12 12
In the State, average cost per capita of the average daily attendance	16 12	16 46
In the State, average cost per capita of the enrollment..	10 26	10 31
In the State, average cost per capita of the population between 6 and 16 years of age, estimated on year's expenditures	8 27	8 22
In the State, average cost per capita of the population between 6 and 16 years of age, including 6 per cent. on permanent property	9 97	9 84

EXAMINATION OF TEACHERS.

Number of meetings held by county boards	1,433
Number of localities in which meetings were held	192
Number of applications for certificates made by gentlemen.....	20,516
“ “ “ “ ladies	17,518
Total number of applications.....	38,034

Total number of certificates granted to gentlemen.....	13,694
“ “ “ ladies	10,789
<hr/>

* In this year, and in subsequent year, the common schools of the State are classified as Primary and High schools.

† Until 1853 the school age was 4 to 21. From 1853 until the passage of the new school law, in 1873, the school age was 5 to 21. The present school law makes 6 to 21 the legal school age. Since the passage of the act of 1873 the enumeration has been taken under oath.

* The report from Hamilton county, as usual, is evidently incorrect—the total number of births reported being entirely too low, eighty-seven male and ninety-three female births, included in total, are reported with no classification as to the month.

TABLE SHOWING THE NUMBER OF SUITS FOR DIVORCE, CAUSE OF SUITS, DIVORCES GRANTED, ETC., IN EACH COUNTY OF OHIO, AS REPORTED BY CLERKS OF COURTS, FOR THE YEAR ENDING JUNE 30, 1880.

Counties.	Suits, etc.										Custody of children.			Cause of divorce.						Total.				
	Suits pending July 1, 1879.	Suits brought within the year.	Total.	Decided within the year.	Still pending.	Brought by husband.	Brought by wife.	Alimony allowed wife.	Granted to husband. TENTH CENSUS OF THE UNITED STATES.

(From advance sheets of the Census Office.)

The following statements exhibit the results of the first count of population according to the schedules returned to the Census Office by the Enumerators of the several districts concerned.

The statement of the population in relation to any township, town, city, or county is still subject to possible corrections by reason of the discovery of omissions or duplications of names in the lists of inhabitants returned.

DISTRIBUTION OF THE POPULATION OF THE UNITED STATES BY DRAINAGE BASINS.

The following table shows, first, the approximate areas, in square miles, of the drainage basins of the different sections of the coast and of the principal rivers of the country; second, the total number of inhabitants within those drainage basins, according to the Census of 1870; third, the number of inhabitants per square mile in each subdivision; fourth, the population of 1880; fifth, the corresponding density of population.

The drainage areas are classified primarily by the two oceans and the Great Basin; second, by sections of the coast; third, by the principal rivers, the rivers of each section of the coast being arranged under that section, and those of branches of a river being placed under the main river.

The primary divisions are set at the margin of the page. Under each primary division its secondary divisions are placed, being indented one space. Under each of these secondary divisions the tertiary divisions are placed, and so on, the subdivisions of a drainage basin being in every case indented within that of the stream comprising them. The New England Coast comprises the area and population of the basins of the several rivers given beneath it, and, in addition to these, the area and population of the minor streams, and of the immediate coast from the eastern border of Maine to the Hudson.

The Middle Atlantic Coast comprises, besides the basin of the rivers under it, in like manner the basins of the minor streams and of

the coast itself as far as the mouth of the Potomac, including this stream.

The South Atlantic Coast, in like manner, comprises the country from the Potomac southward to Florida.

The Gulf of Mexico, commencing with the Peninsula of Florida, embraces the coast and the whole Mississippi valley to the mouth of the Rio Grande, including the latter stream.

The populations of the various subdivisions were obtained by using the county as a unit, subdividing the counties into tenths in cases where they lie partly in one basin and partly in another. Of course, in making these divisions of counties, population and not area was considered.

The areas of the different basins were measured approximately from maps, and were finally adjusted to suit a total area of the United States (which had been determined with great care) of 3,025,600 square miles, exclusive of Alaska.

The table shows that, of the total population of the United States in 1880. $97\frac{1}{10}\%$ per cent. live on the Atlantic Slope, $\frac{1}{10}\%$ per cent. in the Great Basin, and $2\frac{1}{10}\%$ per cent. on the Pacific Slope.

Of those living on the Atlantic Slope, the following proportions are in the various sections:

	Per cent.
New England Coast.....	7.5
Middle Atlantic Coast.....	18.4
South Atlantic Coast	8.2
Great Lakes	11.3
Gulf of Mexico (excl. of Mississippi River)	8.2
Mississippi River.....	43.5
Total	97.1

THE DISTRIBUTION OF THE POPULATION OF THE UNITED STATES IN ELEVATION ABOVE SEA-LEVEL.

(By Henry Gannett, Geographer, Tenth Census.)

The following table is explained by its headings. It is to be regarded as only approximate, as the curves of elevation above sea-level cannot be constructed with accuracy in the present state of our knowledge of the relief of the country, and as, in cases of the subdivision of counties by contour lines, it is not possible to divide the population with accuracy.

TABLE SHOWING THE DISTRIBUTION OF THE POPULATION IN ELEVATION ABOVE SEA-LEVEL.

Feet. Height above sea-level.	Approximate areas, in square miles.	Population.		Population per square mile.		Increase in density, 1870-1880.	Percentage of total population. Above 10,000	25,000	522	26,400	0	1 0	1 0	5-100	5-100	—	38,558,371	50,102,866	100	100	0.0

It will be noticed that nearly one-fifth of the inhabitants live below 100 feet, *i. e.*, along the immediate seaboard, and in the swampy and alluvial regions of the South; more than two-fifths below 500 feet; more than three-fourths below 1,000 feet, while ninety-seven per cent. live below 2,000 feet.

In the area below 500 feet is included nearly all that part of the population which is engaged in manufacturing and most of that engaged in the culture of cotton, rice, and sugar.

The interval between the 500 and 1,500 foot contours comprises the greater part of the prairie States and the grain-producing States of the Northwest.

East of the 98th meridian the contour of 1,500 feet is practically the upper limit of population, all the country lying above that elevation being mountainous.

The population between 2,000 and 5,000 feet is found mainly on the slope of the great western plains. In this region the belt between 2,000 and 3,000 feet is almost everywhere the debatable ground between the arid region of the Cordilleran plateau and the humid region of the Mississippi Valley. Above 3,000 feet, irrigation is almost universally necessary for success in agricultural operations.

Between 4,000 and 5,000 feet, and more markedly between 5,000 and 6,000 feet, it will be noticed that the population is decidedly in excess of the grade or grades below it. This is mainly due to the fact that the densest settlement at high altitudes in the Cordilleran region is at the eastern base of the Rocky Mountains and in the valleys of the Great Salt Lake, which regions lie between 4,000 and 6,000 feet. Of these the extensive settlements at the base of the mountains in Colorado are mainly between 5,000 and 6,000 feet.

Above 6,000 feet the population, which is confined, of course, to the Cordilleran region, is almost entirely engaged in the pursuit of mining, and the greater part of it is located in Colorado, New Mexico, Nevada, and California.

Examining the increase in population in the several divisions, during the past decade, there will be noticed a decided increase in the lowest grade, due to the increase in our seaboard towns and cities; also a gain, though not as decided, in the grade of 100 to 500 feet, with a more marked increase between 500 to 1,000 feet.

Between 1,000 and 2,000 feet the increase has been nearly 50 per cent. In this grade the effect of immigration in new and previously unsettled regions appears, as in parts of Texas, Kansas, Nebraska, Dakota, and Minnesota.

Above 2,000 feet the increase, though small numerically, is proportionally very great. Between 4,000 and 6,000 it is more than 100 per cent., due mainly to the newly awakened interest in mining. To this cause may also be largely attributed the increase in population in the higher altitudes.

A computation, based upon the few facts here submitted, shows that the mean elevation of the population above the sea is about 700 feet.

The mean elevation of the surface of the United States has been estimated at 2,600 feet.

TABLE SHOWING THE RELATIONS OF THE SEXES IN THE SEVERAL STATES AND TERRITORIES, AND IN THE UNITED STATES, WITH A SUMMARY OF THE CHANGES DURING THE PAST DECADE.

		Colorado	10,394

In the United States, as a whole, there is a loss of 1,282 in the ratio on 100,000 males in the last decade.

THE POPULATION OF THE UNITED STATES CLASSIFIED BY RACE.

[From Official Report Tenth Census U. S.]

Tables I and III relate simply to the white and colored races. Asiatics, including Chinese, Japanese, East Indians, etc., and American Indians and Half-breeds, are not included. Of the former there are in the United States 105,717; of the latter, mingled with the white men and not under tribal relations, or upon reservations, there are 65,122. The number of other Indians in the United States, viz.: those still under tribal relations or upon reservations, supported in part or entirely by the Government, has not yet been reported to the office.

The greatest proportion of colored to white is in South Carolina, where three-fifths of the whole are colored. In Louisiana and Mississippi, from one-half to three-fifths are colored. In Alabama, District of Columbia, Florida, Georgia, North Carolina, and Virginia, the colored form one-third to one-half of the total. In Arkansas and Tennessee, from one-fourth to one-third of the total population are colored. The least proportion among the former slave States is in West Virginia, where there are but 4,355 to 100,000 whites, and in Missouri, where there are but 7,168.

Outside of the former slave States, the proportion of colored is very small.

TABLE I.

State.	Total population, 1880.	White.	Colored.
United States	50,152,866	43,404,876	6,577,151

Washington	1,135	979
West Virginia	26,541	26,766
Wisconsin	4,022	3,037
Wyoming	52,813	44,548
	62,676	39,115

NUMBER OF FOREIGN-BORN TO EACH 100,000 NATIVES—Continued.

a.—Foreign 50 per cent. or more of the native.

Arizona	65,613	Minnesota.....	52,172
California	51,167	Nevada	70,016
Dakota.....	62,112		

b.—Foreign 25 to 50 per cent. of the native.

Colorado	25,686	New York.....	31,284
Connecticut	26,336	Rhode Island.....	36,491
Idaho	44,112	Utah.	43,943
Massachusetts	33,069	Washington	26,706
Michigan	31,118	Wisconsin	44,548
Montana	41,658	Wyoming	39,115
Nebraska.....	27,430		

c.—Foreign 10 to 25 per cent. of native.

District of Columbia.....	10,662	New Hampshire.....	15,292
Illinois.....	23,389	Ohio	14,060
Iowa.....	19,183	Oregon.....	21,091
Kansas.....	12,378	Pennsylvania.....	15,900
Missouri	10,791	Vermont.....	14,054

d.—Foreign 2 to 10 per cent. of native.

Delaware.....	6,905	Maine	9,977
Florida.....	3,773	Maryland	9,701
Indiana	7,836	New Mexico	9,154
Kentucky	3,742	Texas	7,748
Louisiana	6,111	West Virginia	3,037

e.—Foreign less than 2 per cent.

Alabama	772	North Carolina	263
Arkansas.....	1,299	South Carolina	773
Georgia	675	Tennessee.....	1,087
Mississippi	817	Virginia.....	979

It will be noticed that, with three exceptions only, viz: the States of Florida, Louisiana and Texas, the southern States are practically without any foreign element.

In those States where the foreign element is large, the general causes are apparent. In the northeastern States, the moving cause is manufactures of various kinds, and the mining of coal and iron. The immigrants are mainly Irish, German, and French Canadian, with some Welsh. In the northwest, agriculture is the principal moving force, and Germans and Scandinavians are the principal nationalities

drawn from; while in the extreme western States and Territories, most of the immigration is due to mining, although agriculture and cattle-raising play a very important part.

Table showing the changes in the relative proportion of foreign to native population which have taken place in the past decade, on the basis of 100,000 of the latter:

<i>Increase.</i>			
Dakota.....	10,703	Michigan.....	1,861
Oregon.....	6,367	Maine.....	1,521
Colorado.....	5,848	Massachusetts.....	1,066
New Hampshire.....	5,035	Florida.....	1,056
New Mexico.....	2,638	Arkansas.....	251
Rhode Island.....	2,287	Washington.....	225
<i>Decrease.</i>			
Arizona.....	85,309	Ohio.....	2,166
Idaho.....	66,726	Illinois.....	2,057
Montana.....	21,587	New Jersey.....	1,980
Utah.....	10,800	Iowa.....	1,507
Nevada.....	9,357	Indiana.....	1,356
California.....	8,714	Kentucky.....	1,299
Nebraska.....	5,903	Delaware.....	979
Minnesota.....	5,424	Mississippi.....	553
Missouri.....	4,036	Texas.....	506
New York.....	3,803	Connecticut.....	477
District of Columbia.....	3,417	Tennessee.....	472
Louisiana.....	3,185	South Carolina.....	385
Kansas.....	2,936	Georgia.....	274
Vermont.....	2,585	Alabama.....	237
Pennsylvania.....	2,410	North Carolina.....	21
Maryland.....	2,258		

The above table shows that in thirty-one States and Territories natural increase has gained upon immigration, while in but twelve is the reverse the case. In the United States, as a whole, there is a relative decrease of the foreign element to the extent of 1,516 on an assumed total native population of 100,000, showing that in the whole country, as well as in a majority of the States, native increase has gained upon foreign immigration.

The increase of the foreign element has been in New England, where the growth has been in the direction of manufactures; in Dakota and Oregon, whose wheat fields have invited settlement; and in Colorado and New Mexico, where an extraordinary development of the mining industry has taken place since 1871.

THE CENTER OF POPULATION IN 1880.

[As reported by the Geographer of the Tenth Census of the United States.]

Latitude, 39° 04' 08",

Longitude, 84° 39' 40".

The position of the Old Observatory, Mount Adams, Cincinnati, is: Latitude, 39° 06' 26".5; longitude, 84° 29' 45".

The center of population for 1880 is, therefore, 2.6 miles south of this observatory and 8.9 miles west of it. That is, it is 9.3 miles west by south from the observatory, or 8 miles west by south from the heart of the city of Cincinnati. This places it in Kentucky, one mile from the south bank of the Ohio River, and one and a half miles southeast of the village of Taylorsville.

The following table, with the accompanying map, shows the movement of the center of population since 1790:

Date.	Position of center of population.			Westward movement during preceding decade.
	N. latitude.	W. longitude	Approximate location by important towns.	
	° ' "	° ' "		Miles.
1790	30 16.5	76 11.2	23 miles east of Baltimore.....
1800	39 16.1	76 56.5	18 miles west of Baltimore	41
1810	39 11.5	77 37.2	40 miles northwest by west of Washington ...	36
1820	39 05.7	78 33	16 miles north of Woodstock	50
1830	38 57.9	79 16.9	19 miles west southwest of Moorefield	39
1840	39 02	80 18	16 miles south of Clarksburg	55
1850	38 59	81 19	23 miles southeast of Parkersburg	65
1860	39 00.4	82 48.8	20 miles south of Chillicothe	81
1870	39 12	83 35.7	48 miles east by north of Cincinnati	42
1880	39 04.1	84 39.7	8 miles west by south of Cincinnati.....	58
			Total	457

The center of population, as defined in the Statistical Atlas of 1874, "is the point at which equilibrium would be reached were the country taken as a plane surface, itself without weight, but capable of sustaining weight, and loaded with its inhabitants, in number and position as they are found at the period under consideration, each individual being assumed to be of the same gravity as every other, and consequently to exert pressure on the pivotal point directly proportioned to his distance therefrom." In brief, then, it is the center of gravity of the population of the country.

COMPARATIVE PRELIMINARY EXHIBIT OF THE OUTSTANDING BONDED INDEBTEDNESS OF CITIES AND TOWNS (AND, IN NEW ENGLAND, TOWNSHIPS), CONTAINING A POPULATION OF 7,500 AND UPWARD.

[As reported by ROBERT P. PORTER, of Chicago, Ill., Special Agent on Wealth, Debt, and Taxation.]

This statement is subject to possible corrections by reason of the further discovery of errors in the imperfect schedules which have, in some cases, been returned by the city authorities.

The entries under the head of "Unspecified" are so placed because the rates of interest drawn by the several amounts have not yet been ascertained. These entries include the so-called "Guaranteed Debt" of Baltimore, Md., a portion of the debt of Mobile, Ala., the debt of Shreveport, La., and a small part of the debt of New Orleans, La.

The amount of the bonded debt of South Carolina is exclusive of the debt of Columbia, in regard to which full particulars have not yet been obtained.

The amount of the bonded indebtedness of Memphis, Tenn., does not appear in this table. The schedule received from Memphis contains the report of the financial condition of the Taxing District of Memphis, in which no statement of indebtedness appears.

The only city in Florida containing a population of over 7,500 (Key West) has no bonded indebtedness.

Of the two cities of Colorado, Denver and Leadville, containing the above population, the former has no bonded debt, and no report of the financial condition of the latter has yet been received.

* With reference to the Statement of the population of Cincinnati, it should be said that the territory of the city has been reduced since 1870, through exclusion of several populous suburbs; the number of inhabitants in 1870 occupying present territory is estimated as between 206,000 and 207,000. Comparison should be made with these figures.

VITAL STATISTICS.

BY D. N. KINSMAN, A.M. M.D.

[Prepared for the Annual Report of the Secretary of State.]

The recurrence of almost the identical ratio of deaths from the most fatal diseases, to the mortality from all causes, for a period consisting of several years, in the present report, is calculated to arrest attention.

The following table exhibits these ratios :

COMPARATIVE MORTALITY FROM—

	Consumption.	Cholera infantum.	Croup.	Measles.	Intermittents and remittents.	Small-pox.	Scarlatina and diphtheria.	Pneumonia.	Cancers.	Cerebro-spinal, enteric, and typhus fevers.	Dysentery and diarrhoea.
1870—U. States...	14.2	4.1	2.2	1.9	2.3	0.9	5.4	8.1	1.3	5.0	6.3
1870—Ohio.....	17.8	3.8	1.9	2.1	1.2	1.1	3.5	6.8	1.4	4.8	6.4
1877—Ohio.....	14.2	3.9	2.2	1.1	1.6	0.9	3.3	2.8	1.4	2.6	2.2
1878—Ohio.....	12.3	3.1	1.7	0.6	1.3	0.1	7.3	2.3	1.6	5.2	2.2
1879—Ohio.....	13.0	3.0	2.5	0.2	1.5	0.1	4.6	3.8	1.5	0.8
1880—Ohio.....	13.0	3.2	2.3	0.1	1.5	0.1	9.0	3.1	1.8	0.1	1.6

The comparative mortality in Ohio is shown still to be less than the average of the United States in 1870. The mortality reported from Consumption—by this we mean the disease known as Phthisis Pulmonalis—still is in excess of that caused by any other disease, and this year has caused 13 per cent. of the total deaths reported in Ohio.

Other diseases, which cause the nearest approach to Consumption in mortality, are, undoubtedly, Contagious. Scarlatina and Diphtheria represent this class with a mortality of 9 per cent. In view of this fact, which is not peculiar to Ohio, there arises the inquiry, whether there is not an element of infectiousness in Consumption, which influences the destructive spread of this disease.

It is certainly very clear to any one who has given attention to this subject, that other factors, besides colds, exposure, condition of soil and accidents of social position enter into the etiology of Consumption.

The opinion is constantly gaining ground, that Consumption is infectious, and that the protection of those who have that type of organization which predisposes to its occurrence, as well as those who have not this inheritance, demands the use of those preventive measures in use to limit the spread of other contagious diseases. These means are isolation, and the use of disinfectants.

A systematic discussion of this subject in all its bearings is not proper for such a paper as this, but the opinions of some who have given much attention to this matter will not be amiss. Villemin believes the wearing of a veil, which has been worn by a consumptive, is capable of being the means of introducing the germs of the disease into the body of a previously healthy subject. Dr. Musgrave Clay, from a record of three recorded observations, has come to the following conclusions:

I. Phthisis or Tuberculosis may be acquired by direct contagion.

II. Conditions favorable to contagion are: living together in common, especially during the night, in apartments where ventilation is insufficient; sexual relations; gestation when the husband is tubercularized; youth of the subject; sedentary life, with exposure to those who are the victims of advanced lesions of tuberculosis.

III. It is probable the contagion is suspended in the air, consisting of dried particles of the various excretions of the patient furnished by the expectorate in sweats, etc.

IV. If possible, to communicate the disease by alimentation—as when the infectious element adheres to or is contained in some article of food.

Calves are the victims of a disease known as the “pearl disease,” said to be caused by feeding upon the milk of cows with disease of the lungs and other organic lesions similar to consumption in man.

The flesh of these calves and the milk of diseased cows, are said to be the cause of Consumption in men.

The persistence of consumption in a family after one member has had it, even though all its members had been previously healthy; the communication of consumption by a diseased husband to a previously healthy wife, or from a diseased wife to a healthy husband, are instances of contagiousness of consumption, which are familiar to the minds of all who have observed carefully the progress of consumption in families.

I call this contagion, for no other hypothesis will account for this widely extended mortality.

Only on some such basis can we hope to arouse public attention to the means necessary for the protection of humanity. These consumptive diseases are not only prevalent in mankind, but it is a well known fact that domestic animals, and even those animals kept for exhibition in menageries, suffer from them.

The introduction of what are known as the necessities of life in an advanced civilization has its influence in the production of this class of diseases. Carpets, hot-air furnaces, dusty occupations, all these and many other things enter into the contingent etiology of consumption.

The mortality reported from typhoid fever is somewhat less than in previous years, but not enough to change the ratio appreciably.

The greatest mortality is in the rural districts. In the larger cities, where we should naturally expect this disease would be most prevalent and most destructive, the mortality is the least. In the following counties the mortality is:

Hamilton	1.6 : 10,000
Cuyahoga	2.6 : 10,000
Franklin	2.8 : 10,000
Lucas	3. : 10,000
Montgomery	2.4 : 10,000

While the average for the State is 3.5 per 10,000 of the population.

Now, as the great bulk of the population in each of these counties, with the exception of Montgomery, is located in the cities Cincinnati, Cleveland, Columbus, and Toledo, the comparison must indicate the freedom of cities from typhoid fever. Then we are left to conclude that the water supplies of the smaller towns and villages of the State are more liable to contamination than those of the larger cities. That this may easily be so, is easily seen when we reflect that most of the potable waters in rural districts are drawn from wells, which are often situated in close proximity to cess-pools, kitchens, etc.

This is an interesting fact, when we reflect that the only known mode of propagation of typhoid fever is, by the introduction of the germs of the disease which escape from the bodies of patients, sick with this disease, into the bodies of sound persons. And this introduction has in most cases been traced to drinking water.

In the case of diphtheria the etiology is not so well worked out. The mortality from this disease is:

Hamilton	4 : 10,000
Cuyahoga	7 : 10,000

Franklin.....	4 : 10,000
Lucas	5 : 10,000
Montgomery	10 : 10,000
For the State (in round numbers)	5 : 10,000

This table shows the presence of local causes not understood, whether telluric, atmospheric, or epidemic.

And we are left to conjecture as to what may be the cause of the persistent presence of this factor of mortality, since its re-appearance twenty years ago, after it had been forgotten for a quarter of century.

In the same manner Scarlatina, since 1797, has been one of the most fatal diseases which has affected humanity. But in Sydenham's experience up till the date mentioned above, a death from Scarlet-fever was almost unknown, nor did it draw in its train such fearful consequences as now follow.

It was then treated by blood-letting in every case, and the uniformity with which patients recovered was cited as an evidence of the efficiency of the treatment. In 1800 there was a change in the character of this fever. It became suddenly most malignant, and covered the British Islands with mourning, having numbered its victims from almost every household.

Since that time it has never lost its baleful reputation. After the constitutional diseases, Consumption and Tuberculosis, diseases of the nervous system have caused the greatest mortality, having a ratio of ten per cent. The fact is kept constantly before us that this class of diseases is constantly increasing. Insanity has filled our multiplied asylums with its victims, and, besides, our county infirmaries, and the homes of our people contain as many more.

Other diseases, while perhaps less dreadful in their effects on the mind, are not less destructive to the usefulness of the sufferer, and, year by year, the genius of the profession is taxed to give names to new conditions which have arisen in this domain.

Any physician who lives in one of our great railroad or manufacturing centers, where great numbers of young men are employed in clerical and other office-work, can testify to the yearly increase of cases, which exhibit symptoms of serious disorder of the nervous system. Railroad engineers, conductors and other train employes show the effects of their occupation in a train of peculiar nervous symptoms. Telegraph operators swell the army of sufferers by their contribution to the number of sufferers from nervous disease. Sanitary measures have reduced the liability of humanity to the destructive epidemics of the past centuries. But the demands of modern living have introduced new

factors of mortality into our social life, which are evidently not less destructive, for their influence increases year by year, and we are far from the end.

Respiratory diseases destroy nine per cent. of the total mortality, and it must be borne in mind this is distinct from Consumption and Tuberculosis, which, as I stated above, are constitutional diseases.

The causes of increased liability to lung diseases, aside from Pneumonia, are not difficult to be found. The multiplication of dusty occupations, of furnaces and foundries, mills, and manufactories of all kinds have their share in contributing to the susceptibility of man to lung diseases. The nervous system and the respiratory system are the most highly differentiated of the organism; hence, liability to disease is thereby increased; in the former by worry, wear of irregular hours of work, and constant repetition of uninteresting details, as in footing of columns of figures; in the latter by causes just indicated above. The birth-rate during the year 1880 was 21.3 per thousand, a depression of the ratio of 1879 by seven-tenths of one per cent. In no county has the ratio equalled that of 1879, at either extreme.

Those counties which reported a high ratio last year, as well as those which reported a low ratio, have done the same this year, which shows a persistence of the same causes. When, however, the birth-rate descends as low as 12 to 15 per thousand, and the death-rate but a little exceeds it—in other words, when the births and deaths nearly balance—it seems as if the doctrines of Maethus had established their footing in a section of country in which the struggle for existence has not become very intense.

The death-rate for the State has been 8.3 per thousand, as against 8.4 in the last report.

The study of the tables, which have been adduced with great care, from data furnished by Wm. M. Cunningham, Statistical Clerk, show us the uniformity of causes acting in a great state year by year, and the continuance of these reports will in a few years reveal to the political economist, as well as the physician, many things in this department at present only dimly shadowed forth.

PUBLIC DEBTS, PROPERTY,
AND
TAXATION.

PUBLIC DEBTS, PROPERTY, AND TAXATION.

The tables relating to State indebtedness, the debts of counties, townships, cities, villages, and school districts in Ohio, valuations, property, and taxation, are collated from the report of the Auditor of State, for current year:

GENERAL STATEMENT OF THE FINANCES OF THE STATE FOR 1880.

The balances in the Treasury to the credit of the several funds, at the close of the fiscal year 1879, were as follows:

General Revenue Fund.....	\$199,577 83
Sinking Fund	741,804 75
State Common School Fund.....	53,730 16
Total	\$995,112 74
The receipts into the Treasury during the year from all sources, as shown below, amounted to	\$6,107,404 76
Total receipts, including balances.....	\$7,102,517 50
Disbursements for same period.....	5,866,626 00
Leaving cash balance in the Treasury November 15, 1880, of	\$1,235,891 50

The above balance is to the credit of the following funds, viz:

General Revenue Fund	\$301,432 74
Sinking Fund	923,761 05
State Common School Fund.....	10,697 71
	\$1,235,891 50

Statement of the receipts, disbursements, and balances of each of the foregoing funds.

Funds.	Balances in the Treasury November 15, 1879.	Receipts during the fiscal year 1880	Total receipts, including balances.	Disbursements during the fiscal year 1880.	Balances in the Treasury November 15, 1880.
General Revenue Fund.....	\$199,577 83	*\$3,750,852 25	*\$3,950,430 08	†\$3, 48,997 34	\$301,432 74
Sinking Fund	741,804 75	†\$34,055 96	†1,575,860 71	652,099 66	923,761 05
State Common School Fund	53,730 16	1,522,496 55	1,576,226 71	1,565,529 00	10,97 71
Totals	\$995,112 74	\$6,107,404 76	\$7,102,517 50	\$5,866,626 00	\$1,235,891 50

* Items \$3,750,852.25 and \$3,950,430.08, each includes drafts drawn upon county treasurers in anticipation of taxes, to the extent of \$1,158,000.00.

† Item \$3,648,991.34 includes \$1,158,000.00 drafts upon county treasurers redeemed, and \$13,970.50 canal tolls, etc., transferred from Revenue Fund to Sinking Fund.

‡ Items \$34,055.96 and \$1,575,860.71, each includes \$13,970.50 canal tolls, etc., transferred from Revenue Fund; also, item \$34,055.96 includes \$9,842.16, uncalled for interest returned from New York.

NOTE.—The balances given in the foregoing exhibit are the actual cash balances in the Treasury; the balances shown by the books of this office are \$18,932.59 less than the cash balances in the Treasurer's hands, the difference being the amount of the warrants drawn upon the Treasurer still outstanding, not having been presented for redemption.

PUBLIC DEBTS IN OHIO—STATE AND LOCAL.

THE PUBLIC FUNDED DEBT OF THE STATE.

On the 15th day of November, 1878, the Public Funded Debt
of the State was..... \$6,476,805 30
There have been no redemptions since 1878, leaving the prin-
cipal of the debt outstanding November 15, 1880..... 6,476,805 30

This sum consists of the following loans:

FOREIGN DEBT—PAYABLE IN NEW YORK.

Loan payable July 1, 1868, not bearing interest.....	\$2,500 00
Loan payable after June 30, 1881, bearing 6 per cent. interest...	4,072,640 30
Loan payable after December 31, 1886, bearing 6 per cent. interest	2,400,000 00
	<hr/>
Total Foreign Debt.....	\$6,475,140 30

DOMESTIC DEBT—PAYABLE AT COLUMBUS.

Canal loan, not bearing interest.....	\$1,665 00
	<hr/>
Total Domestic Debt.....	\$1,665 00

There were re-valuations of the real property of the State for the years 1826, 1835, 1841, 1847, 1854, 1861, and 1871.

NOTE.—Prior to 1826 real estate only was brought upon the duplicate for taxation for State purposes. Funds for county purposes were derived from a poll tax, and a tax upon horses, mules, and cattle, to which was added, by Legislative appropriation, a percentage from one-fifth to one-half, varying with the several years, from the tax levied upon real estate.

Under the act of February 3, 1825, which took effect March 1, 1826, all taxable property was placed upon the grand duplicate, viz., lands and town lots, including buildings, horses, cattle, pleasure carriages, and merchants' and brokers' capital, to which was added, "money loaned at interest," and manufacturers' capital, under the act of March 14, 1831.

Under the act of March 2, 1843, a new system of taxation was inaugurated, which, with various slight modifications, is now in force.

CENSUS BULLETIN NO. 89.

DEPARTMENT OF THE INTERIOR, CENSUS OFFICE,

WASHINGTON, D. C., *April 7, 1881.*

SIR: I have the honor to submit herewith a preliminary exhibit of the financial condition of the State of Ohio for the fiscal year ending November 15, 1879, embracing the amount of assessed valuation of real and personal property; the amount of bonded indebtedness (irrespective of sinking fund and property available or set apart for the payment of debt and interest) tabulated by counties, cities, towns, villages, townships, and school districts; and the amount of State and local taxes levied on counties, cities, towns, villages, townships, and school districts. The above date, November 15, 1879, was, at the time of undertaking the work, the latest up to which a complete exhibit of the State's finances could be made.

There are twenty-one cities in the State having over 7,500 inhabitants, by the latest returns. Possibly, on final revision of the population schedules, this number may be increased. The tax of the city of Bellaire, both for general and for school purposes, is given for the fiscal year ending July 30, 1880, the one exception to the uniform rule, applied to all the other subdivisions of Ohio, of giving both the debt and the tax as they stood November 15, 1879. Bellaire had at that date a small floating debt, without interest, which is not noted in the table. The debt of these cities is tabulated in gross without any reference to the amount of sinking fund, of cash on hand, or of property available or set apart for liquidating or reduction thereof. For example, the debt of Cleveland on the above date was \$6,127,000. The city had an offset to this indebtedness of \$2,427,871, consisting of \$500,144.02 cash in treasury and \$1,927,726.98 sinking fund. The State Auditor returns the debt of this city as \$3,699,129, deducting the cash on hand and the amount in sinking fund. Hence, the difference between the Census and the State's accounts of Cleveland's debt. Of other cities having cash on hand or sinking fund applicable to the payment of debt, Cincinnati holds the largest amount, namely, \$364,875.69 cash; Toledo, in cash and loans, \$241,197.38; Youngstown, in cash, \$17,122.84; and Dayton, in cash, \$26,745.85. Besides these, several other cities and some counties have each a small reserve towards liquidation of debt.

The tendency in Ohio towards making all indebtedness a bonded one is so great that there are but few public debts of the floating class. Thus only three counties, Adams, Clarke, and Scioto, have a county floating debt, amounting to only \$4,778.18; five cities, Cincinnati, Dayton, Zanesville, Chillicothe, and Portsmouth, a floating debt of \$56,869; and in only six counties, Franklin, Geauga, Lawrence, Logan, Miami, and Washington, have the villages or townships a floating debt, amounting in the aggregate to \$32,058.10. The total local floating debt of the State is only \$93,706.08. No separate columns in the table have been prepared for these floating debts, but they are included in the total of each county and the apparent discrepancy of addition explained in a foot-note.

The schedule returned by the city authorities of Cincinnati, dated August 28, 1880, gives the sinking fund at \$2,411,000, of which there is the sum of \$170,000 in cash. The same schedule gives the floating debt of that city as \$500,000. The difference in time explains the seeming discrepancy.

The township and village taxes are tabulated together, it being found impossible to separate them with exactness, for the above fiscal year.

• Respectfully submitted,

ROBERT P. PORTER,
Special Agent.

HON FRANCIS A. WALKER,
Superintendent of Census.

OHIO.—Preliminary Exhibit of the Financial Condition of the Counties, Cities, Villages, School Agent of the United States Census,

RAILROAD MORTGAGES AND CANCELLATIONS.

Name of Railroad.	Mortgages recorded.	Mortgages canceled.
Bellaire and Southwestern (a)	\$765,000	\$668,000
Celina, Van Wert and State Line	48,000
Cincinnati and Muskingum Valley	1,500,000
Cincinnati, Indianapolis, St. Louis and Chicago (b)	6,885,000
Cleveland and Mahoning Valley	36,673,760
Cleve., Col., Cin. and Indianapolis (on city lots) (c)	400,000
Columbus, Scioto and Hocking Valley	1,100,000
Columbus and Maysville	350,000
Columbus and Sunday Creek Valley	500,000
Connotton Valley	662,000
Connotton Northern	1,125,000
Dayton and Union	325,000	150,000
Dayton, Covington and Toledo	600,000
Greenville and Miami	150,000
Indianapolis, Cincinnati and Lafayette (b)	2,800,000
Lake Erie and Louisville	300,000
Lake Erie and Western (d)	3,300,000
New Richmond Branch of Cincinnati and Eastern	350,000	90,000
New York, Penn. and Ohio (e)	87,500,000
“ “ “ (per annum five years)	357,180
Ohio Central	6,600,000
Ohio and West Virginia	1,584,000
Painesville and Youngstown	1,400,000
Pennsylvania Company	7,000,000
Rocky River	35,000
Scioto Valley	1,800,000
Springfield Southern	1,000,000
Toledo, Delphos and Burlington	5,754,725	65,000
Van Wert and Paulding	4,000
Valley Railroad Company	4,500,000
Wabash Railroad Company (f)	2,000,000
Wabash, St. Louis and Pacific (f)	50,000,000
Wheeling and Lake Erie	3,500,000	(g) 5,800,000
Totals	\$218,518,665	\$19,123,000

NOTE.—As railroad mortgages are recorded and canceled in each county through which the road passes, the largest sum named in any one county is presumed to represent the total amount of mortgage or cancellation, but as smaller lines may or may not be included in the largest sum named, it is impossible to give an *exact* net total.

(a) Reported from Monroe county.

(b) Reported from Hamilton county.

(c) Reported from Cuyahoga county.

(d) Reported from Allen county.

(e) This is the largest sum named in any one county, but the amounts differ so much in each county, that it is difficult to ascertain the correct amount.

(f) Lucas county reports \$52,000,000 on “Wabash Railway Company,” presumed to be the same mortgages included herein.

(g) Reported from Carroll county.

CONVEYANCE STATISTICS.

THE FRUIT CROPS OF OHIO.

PREPARED FOR THE ANNUAL REPORT OF THE SECRETARY OF STATE,

By GEO. W. CAMPBELL,

Secretary of the Ohio State Horticultural Society.

The season of 1879 cannot be regarded as a favorable one for the fruit-growers of Ohio. The previous winter was one of great severity, and in many parts of the State a large proportion of the fruit-buds were destroyed, and in the central portion of the State many trees were killed, and others seriously injured. As a natural consequence, all kinds of orchard fruits were very scarce, and some kinds entirely wanting.

The statistics of the apple crop, as gathered from reports of the township assessors, show but 8,861,313 bushels as the crop for the entire State, which, as compared with the yield for 1878, 30,669,404 bushels, shows a falling off of 21,808,091 bushels, this being what is commonly called the off or non-bearing year. As a consequence of this diminished crop, prices were very high for even inferior fruit. The unfortunate habit which apple-trees seem to acquire as soon as they arrive at full-bearing age, of over-bearing on alternate years, and giving very light crops on those intervening, has been alluded to in former reports; but a practical solution of the difficulty seems as remote as ever. During a year of excessive bearing, the energies of the trees seem to be so entirely directed to the production and maturing of the burden of fruit, that the growth of new wood, which contains the fruit-buds for the following year, is greatly enfeebled or entirely checked, and another unfruitful season is required to grow fruiting wood for the succeeding year's crop. There are occasional localities where orchards, or limited portions of them, from some local causes reverse the usual order and bear large crops on the years of general failure, and these, of course, are much more profitable to their owners. One notable instance of this kind occurred in the orchard of Horace McMasters, of Delaware county. During the heavily bearing year of 1878, a portion of his trees were so badly infested by worms that they gave little or no fruit; but his crop upon the non-infested trees was about 2,000 bushels. But the following year the trees which had been prevented from bearing by the attacks of the worms,

gave an abundant crop, and he harvested 1,800 bushels, which were principally retailed at \$1.00 and \$1.20 per bushel in Delaware. This suggests as a remedy for the alternate overbearing and scarcity, the entire removal during the bearing year of the whole crop from a portion of the trees as early as possible, to change the season to the year of non-bearing, and though the labor would be great, it would probably be successful. But, if a season of extreme cold or an untimely frost should afterward sweep over the land, destroying the crops upon all trees, the labor would probably be lost, and the old habit be re-established. The apple crop is justly regarded as the most important of the fruit crops of Ohio, and although it is difficult to estimate its value even approximating to accuracy, it was probably not less than \$3,500,000 for the year of 1879. It is highly probable that the reports derived from the assessors' returns are below the actual amounts, for many persons neglect, or are unable to give accurate returns. I observe that the report of the number of acres in orchards is given as 1,533 less in 1879 than in 1878, which is probably incorrect, as there is no apparent reason why orchards should be abandoned, or that planting of new ones should not have continued in proportion to the increase of population as heretofore.

Very large exports of American apples have been made from the eastern States for years past, and it is highly probable that all our surplus crop of good-keeping varieties may thus be profitably disposed of. I am not aware that Ohio has contributed to this foreign market, but I have seen recent statements that one county in New York exported the past season 350,000 barrels. The year 1880, just passed, has been generally prosperous, both for the agriculturist and the horticulturist, and although accurate statistics cannot yet be given, an approximate statement of the apple crop has been made, based upon estimates from various township correspondents, placing it at 17,722,626 bushels, which is probably much too small.

The peach crop in Ohio is much more variable and uncertain than that of the apple. The trees are so much more liable to injury by severe cold, and the fruit-buds so much more liable to be killed by the rigors of winter, or cut off by late and untimely frosts in Spring; the peach crop may be regarded as very precarious. The crop for 1879 for the State, is given at only 145,743 bushels, which may be regarded as very nearly a failure. The crop of 1878 was considered a light one, 1,476,159 bushels. I have no statistics at hand of the product of the year 1880 just passed, but it may be safely stated as much larger than for many previous years, and generally distributed through all parts of the State, as a mild winter preceding and a favorable season following gave abundant fruitage

wherever there were trees in good condition. The northern portions of the State, upon the islands and the vicinity of Lake Erie, where the temperature is modified and to some extent equalized by its influence, seem most favorable for peach-growing.

From an interesting report to the Ohio Horticultural Society, by Mr. G. M. High, of Ottawa county, I learn, that peaches have not failed to produce paying crops for the past six years in the island region, and that more than 200,000 trees have been planted in the township of Danbury, Catawba Island, and Put-in-Bay, in Ottawa county, during the past three years. Forty thousand bushels were shipped from Catawba Island the past season (1880), principally to Detroit, Toledo, and Chicago, at an average price of \$1.00 per bushel, net. The principal varieties grown are Crawfords, Smock, Salway, and Stump-the-world, the latter varieties being found most profitable.

The more elevated of the hilly portions of the south are perhaps nearly as good, while in the central parts of the State, by reason of greater variability and lower temperature in winter, the peach crop is rendered so uncertain, that very few peach orchards are planted, and those that are planted are not profitable.

The pear crop, though comparatively small, is much less variable than that of either peaches or apples, and the reports indicate a gradual increase of production. The reports are probably much below the amounts really produced in the State, for, by reason of the discouragement caused by the persistent and disastrous effects of blight, but few large pear orchards are planted. There are, however, very considerable amounts raised in a small way, in private gardens, which are probably not taken into the general account. The yield for 1876 is given as only 42,264 bushels; for 1877, 80,254 bushels; for 1878, 110,419 bushels; and for 1879, 111,090 bushels. The pear-tree does not seem as much inclined to over-bearing as the apple; hence, the greater tendency to regular and even crops. If some practicable remedy could be found for the blight, this admirable and delicious fruit would rival the apple in importance among our fruit crops.

The attention of practical fruit-growers has long been directed to this perplexing malady, with a view to the discovery of its causes, and of a remedy for its disastrous effects; but, so far, it must be confessed, without very satisfactory results in either direction. Recent investigations, by Prof. T. J. Burrill, of the Illinois Industrial University, seem to have demonstrated that the blight of the pear-tree, and the twig-blight of the apple have a common origin in a low order of microscopic organisms called *Vibriones*, or *Bacteria*. If an accurate knowledge of the cause is

FRUIT CROPS OF OHIO.

ascertained, the discovery of a practicable remedy will be much more likely to follow, and we may hope that the investigations of scientists in this direction may be productive of the most valuable results.

Plums are produced in considerable quantities, principally of the blue Damson varieties, with some of the improved wild or Chickasaw plums, called the Wild Goose, also a few Green Gages, Lombards, and other fine varieties. The markets are moderately supplied, principally from the southern part of the State. The prices are always high, but no accurate statistics of either the value or quantity raised can be given. The great difficulty in plum-raising arises from the attacks of that persistent insect pest, the curculio. In some sections the disease of the trees, known as the black knot, has been quite prevalent, and fatal to both the plum and cherry. These pests will doubtless continue to interfere seriously with the successful growing of plums, and their production will probably not be largely increased.

Cherries, especially the Bigarreans, or sweet varieties, are almost as unreliable and uncertain in fruiting as peaches, and from similar causes; and besides, even in favorable seasons, they are subject to the attacks of insects, and to rotting badly. These finer kinds are grown mostly in the northern portions of the State, while the Morellos, the Early May, and Richmond cherries are most largely grown in the southern counties, though these hardier kinds are more generally distributed throughout the State. The production of cherries seems quite variable, but the markets are generally fairly supplied in their season.

The "small fruit" crops, including strawberries, raspberries, gooseberries, and currants, have certainly attained an importance and magnitude that should warrant the collection of accurate and reliable statistics of their value and production in our State. Large areas are devoted to their culture in the vicinity of all the large cities, and also in smaller towns and villages. Their use has come to be regarded as promotive of the health of the people, and in their season as household necessities in nearly every home in the State. Mr. Bateham estimated the number of bushels of strawberries consumed in the city of Cincinnati during the season of 1879 at 40,000 bushels, with as many more shipped from that point to other places. The amounts for Dayton and Columbus were estimated at 10,000 to 15,000 bushels, and for Cleveland 25,000 bushels, besides large amounts shipped to Detroit, Buffalo, and other points outside the State. The average wholesale price is stated at about \$2.00 per bushel. Large as these estimates are, they are probably below, rather than above the truth; and by reason of improved varieties, better and cheaper modes of culture, better methods of shipping and marketing,

and a constantly improving taste of the public at large, the production of strawberries and other small fruits increases largely every year. Second only in importance to the strawberries may be considered the crops of black and red raspberries. The hardiness and great productiveness of the improved black-cap varieties, such as the Doolittle, the Mammoth Cluster, and the Gregg, render them specially adapted to large field-culture, and they are profitably raised at prices which place them within the reach of all. It was estimated that 75,000 to 80,000 bushels of black raspberries were handled in Cincinnati in 1879, and correspondingly large quantities were doubtless produced in other places throughout the State. The estimated average price is the same as for strawberries, about \$2.00 per bushel. Red raspberries are not as largely grown, being generally less productive as well as less hardy, the plants more likely to be injured in winter. The price is generally about double that of the black varieties. Blackberries were quite abundant the past season, both of the cultivated and wild sorts, and the markets were fairly supplied, but I am unable to give any reliable information as to quantities or value. Currants and gooseberries are of considerable importance, and their use seems to be increasing; but the currant-worm, which has for some years seriously injured the crops of eastern growers, has appeared in Ohio, and promises to lessen or destroy both currants and gooseberries, unless active measures are taken to check their increase.

The grape crop, in the Annual Report of the Secretary of State for 1878, is given as 10,341,715 pounds, and the acres in vineyards 8,866, with 1,096 acres planted during the same year. The November report of the State Board of Agriculture for the year 1880, after correcting an error as to Delaware county, gives the crop of 1879 as 16,313,166 pounds; number of acres, 13,099, and acres planted during the year, 1,045. A marked discrepancy appears in the number of acres in vineyard, and the number of acres planted in the two years, showing that the methods of obtaining these reports cannot be very accurate. The Sandusky Register, in a published report the past season, said to have been carefully compiled, states the number of acres cultivated in vineyards in the lake region alone, including the islands at the western end of Lake Erie and the neighboring shores of Sandusky Bay, at 4,000 acres, yielding 16,000,000 pounds of grapes. The wine-houses in the same district report a production of 1,526,400 gallons of wine, the greater part of which is pressed from the Catawba grape. If this report of the Register is even approximately correct, it will be seen that the report of the State Board of Agriculture must be very far below the truth in its estimate for the whole State. Reports from the islands for 1880, by Mr. G. M. High, to the Ohio

State Horticultural Society, show that the grape crop for the past season was one of the best ever made, the yield being nearly 3 tons per acre, and the amount realized from 1,500 acres being over \$300,000. Average gross receipts were \$213 per acre. An accurate account of expenses for cultivation, gathering, etc., gave \$30 to \$45 per acre. About three-fifths of the grapes grown are Catawbas, the balance mostly Concords, Delawares, Clintons, Ives', Norton's, and Schraidt's Seedlings. Prices were as follows, and better than for several years: Catawbas \$80, Delawares \$120, Norton's \$160, Clintons and Schraidt's Seedling \$100, Ives' \$60, and Concords \$40 per ton, and all in demand at these prices. Recent plantings, when the soil is suitable, are largely of the Delaware grape, it being found in that section one of the most profitable.

The grape crop for 1880 was unusually fine throughout the State, the season being very favorable, and the maladies of mildew and rot much less injurious than for many years. A much better feeling prevails among grape-growers, and the introduction of many new and very promising varieties, both for table use and wine-making, seem to warrant the belief that this branch of fruit-growing is progressing favorably and will rapidly increase in magnitude and importance. The failure of the vineyards in many of the largest wine-producing districts of Europe, and the acknowledged adaptability of American vines to replace and repair their devastated vineyards, has created an immense foreign demand for cuttings and plants of many of our native grapes, which will doubtless continue for many years.

In nearly all branches of fruit-growing it may be said substantial progress in improvement has been accomplished, and where intelligently pursued, may be regarded as promising for profit to the cultivator as any branch of horticulture or agriculture.

ARBORICULTURE.

THE ADVANTAGES TO BE DERIVED FROM TREE-PLANTING.

BY FRANKLIN B. HOUGH,
Chief of Forestry Division U. S. Department of Agriculture.

[Prepared for the Annual Report of the Secretary of State.]

The State of Ohio was, less than a century ago, for the most part covered with a heavy growth of native forest; and where there were exceptions to this in "Oak Openings" and small prairies, the absence of timber was due to no defect in soil or climate, but to its destruction from some obvious or easily discovered cause, and usually from fire.

In a country thus plentifully supplied with wood-lands, and where the first and most difficult labors of the settler were expended in clearing off a portion of this superfluous growth, to make room for cultivation, it is not surprising that the extent and thoroughness of this clearing should come to be regarded as an indication of the farmer's thrift and enterprise, and that a tree should come to be regarded by him as an obstacle to be removed. Among this handy class of pioneers, it was rare to find one who could see much to admire in a tree, unless, perhaps, its fitness for rail-timber or some other use; and if, by chance, the borders of his fields, along the roads and line-fences, occasionally show a row of trees that, from a distance, present the appearance of having been planted there, it will generally be found, upon near inspection, that these trees are nothing but a chance-growth that has sprung up without his care, and that has grown through his neglect.

The neatly planted avenues occasionally seen along the highways, or in the streets of villages, and the beautiful little groves that often make a rural home so charming, are, for the most part, due to the careful planting of a younger class, who did not share in the hardships of the beginning, and who have not acquired the antipathies of the pioneer. This class has already discovered one advantage from tree-planting in this, that it tends to beautify and adorn the country, rendering it more cool and inviting in summer, and less exposed to the storms of winter.

The comfort and shelter of a neatly planted grove around the farmhouse, besides the happiness that it secures to the inmates, is indeed most cheerful and inviting to the stranger. If there be a little more taste and skill (which does not necessarily imply much expense), exceptionally shown in the grouping of trees and shrubbery, with the view of securing pleasant outlines in form, and proper contrasts of light and shade, we often pause to admire the beauty we enjoy, although scarcely able to describe it, and feel assured that the family that has created this scene of beauty around them is one of culture and refinement. We feel assured that they are the owners of the property that they have adorned, for no tenant thus plants upon the lands of another, and that probably they are persons of ample means, for such improvements come generally after the homestead is paid for. They certainly present the strongest of motives for the keeping of such homesteads in the family, and thus tend to produce stability in our institutions, and to encourage improvements generally.

Looking upon such homestead adornments in the baser light of gain, it would need no argument to prove that they would sell or rent for more money than without them, and that the time and money that has been expended upon them is invested to advantage.

The crowds that seek retreat from the heat and dust of cities in summer, are attracted by nothing so inviting as a grove or a wild woodland with its grand old trees, its tangled thickets, and its limpid streams. In a sanitary, as well as an aesthetic point of view, therefore, we find an argument in favor of groves and wood-lands. This advantage does not entirely depend upon their freshness and coolness in summer, for the balsamic fragrance that may be noticed in some forests is found to prove eminently beneficial in certain forms of pulmonary disease. The pine forests of south-western France are annually visited by thousands of invalids from the cities, who find relief and restoration in the resinous aroma of these woods, and the life-inspiring atmosphere among them. The pine woods of our southern States enjoy a deserved reputation as a resort for invalids, and the plantations of Eucalyptus in climates where this tree will flourish, are celebrated for their salutary effect upon the climate around them.

Without further dwelling upon the refining and salutary influences of groves and wood-lands, let us proceed to notice some of the direct pecuniary benefits resulting from timber culture in a region like Ohio, where there is not the slightest difficulty in the way of cultivation, from any natural cause, and where we may select, from an immense number

of species congenial to the soil and climate, those that promise the greatest profit and most certain success. In countries where forest-culture has been most carefully studied, it has been found that wood-lands are more apt to get overrun with the cheaper, but more thrifty kinds, to the exclusion of those of slower growth, but greater value, and that the greatest profit can only be secured by carefully watching the growth, and by suppressing, as far as may be, all tendencies that hinder the full development of the species most desired.

Applying this rational idea to the wood-lands of this country, it will be found poor policy to simply allow a piece of land to grow up with whatever timber chance may bring in, for any land will generally, if abandoned to itself, in a few years be overgrown with some form of trees or bushes, but, that it will be economical, in every sense, to sow or plant the kind of timber that will be of most worth when grown, and to give it every chance that its welfare requires.

The kinds of timber that have been most sought after by lumbermen, and which bring the best prices in the market, are already, in many parts of the country, scarce, as shown by their increase in prices, and their entire exhaustion in localities where they were once common. There is no part of the country where we can now afford to cut the black walnut, the hickory, the ash, and the white oak for fencing or fuel, for they bring a better price in the forms suited for the manufactures in which they are used. The same is true of some other kinds of trees that have heretofore been thought of little value except for fuel, and we every year see some new uses arising for timber that were not realized before. We notice among lumbermen a tendency to economize, by working up parts that were formerly thrown away, and to waste less in cutting and preparing their merchandise for the market. This is especially to be observed in the great lumbering districts of the country, where the average diameter of the logs sawn into lumber is now some inches less than formerly, and prices are now paid for inferior grades of timber much greater than were once realized for the finest qualities. In fact, the lumbermen now work up stock that was once left in the forest as not worth the hauling, and comparatively little is left to rot on the ground.

These facts indicate a time as approaching and near, when wood will become an object worth cultivating for profit, upon lands that have lost their fertility for agriculture from long cultivation and improvident tillage, and upon broken and stony fields, that may now be yielding but a scanty return for pasturage. It will often be found that such lands have a sub-soil just suited for timber-growth, and that lands scarcely

worth anything for farming purposes, may yield a fair revenue from the judicious planting of trees. We have in mind a rugged and stony hill, in one of the counties on the Hudson, in the State of New York, upon which there was a thrifty growth of young ash-trees, growing very densely together, and upon soil that could never be plowed, and where there could never have been much pasturage. The owner would have, every five or six years, an immense crop of hoop-poles, which found a ready market at a fair price, and which yielded a greater income on the average than any interval lands in that region. They cost him nothing but the fencing and the labors of his occasional harvest. There are sprout-lands of chestnut in the country, more profitable than any arable lands around them, and often upon a surface that would be a barren waste if cleared.

The Ohio farmer has advantages over the prairie farmer of the West, that he can scarcely appreciate unless he has witnessed the difficulties of cultivation in a country without trees. It is true, the prairie farmer finds the soil ready for his plow, but he must from the very beginning depend upon more favored regions, and often upon a costly transportation for timber, or the articles made from timber, that he must use upon his farm. He must have material for his dwelling and stables, his implements, his furniture, and his fences, if he has any; and although in the item last mentioned, he may learn the useful lesson from the beginning, that he can do without a great deal that he may have formerly deemed quite indispensable, he feels from the first the burden of this tax upon his industry, and, if wise, he loses no time in beginning a plantation for his future supply.

In the older and once heavily timbered sections of the country, waste is bringing want faster than most are willing to believe, and while many are awakening to a realization of the situation, there are here and there still those, who, unable to take a comprehensive view of the country as it is, content themselves with what they see around them, within the narrow circle of their own horizon, and would fain believe that the exceptional abundance of their own particular spot is a universal plenty, and that the little resources that they look upon as immense, will prove an inexhaustible supply to all coming time. We even find those whose narrow and selfish minds can take no thought or care, beyond their own immediate wants, during their own brief existence, and if there be enough around them to last while they live, they take no heed or care of a future. Such men will often be heard to say: "If there is enough for me, let other generations take care of themselves,"—and very likely they will add the stale and silly remark, that is neither

wise nor witty, "Posterity has done nothing for me—why should I do anything for them?"

If we accept these facts concerning the undue and increasing exhaustion of our forest supplies, we must logically admit the conclusions, that it is our duty to adopt measures for meeting the emergency before us, which can be done no other way than by planting trees. This can only be done by the owners of the land, for timber culture is an industry that is not followed by a tenant, and it does not bring quick, although it may, when managed with due intelligence, bring large returns. A plantation has from the beginning a value as much or greater than its cost, and its market value increases with its growth till it is ready to be cut. The cultivation necessarily implies a certain degree of faith and foresight, a stability of plans, a sufficiency of means to wait for the returns, and, above all, a due amount of intelligence in the management to secure full success. To this end, we need some degree of education in our schools, for leading the youth who are to be our future farmers to a proper understanding of the importance of the subject, and something of the proper methods for securing the best results. We need the aid of influential citizens, both in precept and example, to demonstrate the advantages to be gained by tree-planting, and this soon, and generally, to prevent the inconveniences that must sooner or later result from enhanced prices, occasioned by exhaustion, or expensive transportation from remote points. We sometimes hear the remark, that there need be no anxiety about the exhaustion of the pine in Michigan or the Upper Mississippi, because there are vast supplies still remaining untouched in other regions of the country. Admitting this questionable fact for the sake of argument, do such persons realize what their lumber would cost if brought from the head waters of the Yellowstone, or from the Pacific coast? It would not be hard to prove the necessity of cutting this lumber thin, and of making a little go as far as possible; in fact, of dispensing with its use, except in cases of the most urgent need.

Our advice in conclusion would be, that every owner of land should endeavor to plant at least as much timber as may be needed for the supply of his own farm, and, if possible, some to sell. That those having wood-lands, should not hasten to cut them, but use these resources to the best advantage, reserving so far as may be for future use, and, as we verily believe, for greater profit, and that in future clearings the young growth should be carefully saved and protected from injuries from fire or cattle until it shall have grown to sufficient size for use.

METEOROLOGY.

METEOROLOGICAL REPORT FOR CENTRAL OHIO, FOR THE YEAR 1880.

[From the U. S. Signal Service Station, Columbus, Ohio.]

The central position of Columbus gives to the observations made at that point a certain prominence and value for all the State.

The accompanying table is very full and complete. From it one can easily ascertain the principle facts pertaining to the climate of Ohio, the amount of rainfall, its distribution through the months and seasons of the year, the direction of the prevailing winds, and the cloudiness, the temperature, pressure of the air, etc., etc. The depth of the snow is not recorded, but the amount of water which the melted snow gives is added to the rainfall, the amount for 1880 being about twelve per cent. over the average. The completeness of the table renders extended explanation unnecessary.

THE GEOLOGY OF AUGLAIZE COUNTY.

[From the Atlas of Auglaize County.]

Auglaize county lies at the southern extremity of the region known as the "Black Swamp." It is only the northwestern portion of the county, however, that possesses the characteristics peculiar to that noted region. It lies on the watershed sloping toward Lake Erie, except a small portion near the eastern line drained by the Scioto River.

There is no portion of the county that can be termed "hilly," yet it is sufficiently undulating, that by a proper system of ditching, the greater portion of it has been brought under cultivation. The Auglaize and St. Mary's Rivers drain nearly the entire county.

The rock underlying the county is, with one exception, concealed by heavy beds of drift, varying in thickness from a few feet, on the farm of George Lathrop, in Logan township, to perhaps a hundred feet in other sections. The only outcrop within the county is the exposure of the Lower Helderberg formation in the bed of the Auglaize River, in Logan township, on the lands owned by Daniel Richardson, Benjamin Backus, J. Pierson, Russell Berryman, and George Lathrop. The stone is generally thin-bedded, of a dark blue color, and contains a large percentage of organic matter. Specimens have been received by the writer, containing as high as 30 per cent. of asphaltum. If this asphaltic stone, on examination, should prove to be extensive it might be made of considerable economical value in macadamizing roads. One of the State geologists pronounces it to be similar in composition to the stone used in the construction of the celebrated roads about Paris, known as the Boulevards. It is not well adapted to lime-burning, and shales too much, when exposed to the air, to be of much value as a building stone. The fossils common to the Lower Helderberg are not abundant in this outcrop. *Leperditia alta* and *Pentamerus galeatus* are the only characteristic fossils found.

Judging from the formation of surrounding counties, the Niagara limestone must underlie the townships of Wayne, Goshen, Clay, Pusheta, Washington, Jackson, German, and St. Mary's, the boundary line between it and the Lower Helderberg formation passing toward the southwest through Union township, thence northwest through Noble township, and about a mile south of Wapakoneta. This line, then, is the shoreline of the Helderberg Sea, that covered the northwestern portion of the country.

As before stated, the entire county, with the one exception, is covered with a deep deposit of drift, the depth of which has not yet been definitely ascertained. This deposit consists of boulders, gravel, sand, and

stratified clay, surmounted by deposits of sand, gravel, and blocks of all sizes, of rock traceable to formations that lie far to the northwest, north, and northeast. Among this miscellaneous collection the writer has noticed specimens from the Galena limestone, from Azoic rock, Hudson, Clinton, Niagara, Lower Helderberg, Corniferous, and Hamilton formations. Many of them contain fossils characteristic of the formations to which they belong. The same remark is true of most of the gravel deposits of the county, except that the above-named varieties of stone have been broken into small pieces and rounded by attrition. Most of the larger transported stones are rounded by wear. The Corniferous, and an occasional block of Niagara stone are the only exceptions. They seem to have been dropped at a date so late that they escaped the eroding and disintegrating agencies that were at work during the time that preceded their deposit.

The phenomena of the drift period have been accounted for in different ways. The glacial theory seems to be the one most generally accepted by geologists of the present day, and is the one adopted by Prof. Newberry, chief geologist of the Ohio Geological Survey in discussing the drift deposits of the State.

The glacial theory, as applied to our locality, supposes a continental elevation to have taken place at the close of the Helderberg period,—the elevation being greatest in the regions north of the Great Lakes, and that this elevation was accompanied by a reduction of temperature corresponding to the altitude that brought on a long arctic winter •

With an elevation of several hundred feet above the present level, the climate of Ohio must have been similar to that of Greenland at the present day. The northern regions are supposed to have been covered by a vast ice sheet that reached as far south as the fortieth degree of latitude. This ice-field of vast extent and thickness moved slowly southward, down the long slope, planing and striating the rocky beds until it reached the warm waters on the south. The surface of the rock at Lathrop's quarry is striated in the same manner as are the surface exposures of most of the rock formations of the State.

The history of the effects of modern Alpine glaciers goes far toward establishing the theory of an ancient glacial period. The moraines of modern glaciers correspond to the accumulations that are common to all the northern regions, and the smoothing, rounding, and polishing of the rocks are the same beneath the Alpine glaciers as over the whole northern hemisphere.

"There came a time at last when the region south of the northern line of the Great Lakes was depressed five hundred feet or more below its present level." During this epoch the fine laminated clays, which cover so much of the rock surface in the interior of the continent, were deposited. They are called the Erie clays by geologists. The blue clay

encountered in digging wells belongs to the series. The thickness varies from five to forty feet in different sections of the county. Wells only penetrate to the water bearing gravel, or sand that lies between the blue clay and the rock. As before stated, the entire surface deposit probably does not exceed one hundred feet in depth.

The forest bed overlying the Erie clay in some sections of the State is not represented in Auglaize county.

The drift of the Terrace Epoch here rests upon the blue clay, and is composed of sand, gravel, clay, and boulders. These materials are arranged in a somewhat promiscuous manner, except in the ridges crossing the country. They, as a general rule, exhibit an oblique stratification, commencing a few feet below the surface and extending downward to the blue clay.

In a few instances the terrace drift seems to have broken through the thin blue clay stratum, and mingled with the gravel and boulders lying next to the rock foundation. "That these materials were not carried by currents of water or glaciers is certain; either of these transporting agents would have torn up the Erie clays, which now form an unbroken sheet beneath them." Unbroken sheet we say, because the instances referred to, in which the terrace drift seems to have broken through the Erie, was probably produced by the grounding of icebergs.

The emergence of the continent after the Erie clay deposit was somewhat slow, and marked by intervals of rest. The glaciers had retreated to the regions north of the Great Lakes. As they moved southward down the slope, and were protruded into the sea, icebergs detached from the protrusions, and loaded with sand, gravel, and boulders, floated out to sea, sowing broadcast their cargoes over the southern alluvials, just as they are now doing over the banks of Newfoundland and the bottom of the Antarctic Ocean.

We have remarked that the emergence of the continent after the Erie clay deposit was somewhat slow and marked by frequent intervals of rest. During these periods the waves washed up ridges, or raised beaches wherever the shore was more nearly level and composed of soft materials. These old shore lines are distinctly marked by the three ridges that cross the county. The outer and older line is characterized by a succession of gravelly knolls and ridges, varying from one-half to three miles in width. It crosses German township, the northwest corner of Shelby county, Pusheta, Clay, and Union townships. New Bremen, Botkins, and St. John's are situated on it. Owosso, however, is the most notable development at the latter place it has been named *Owosso*.

The second gravelly ridge, called the *Wabash Ridge*, intersects the county in a similar way, passing through St. Mary's, Moulton, and Duchouquet townships. It is intersected by the Auglaize River at Wapakoneta. The third passes through the northern part of Salem

township. This is simply a broad, gentle undulation or thickening of drift, and consists mostly of clay. If it contains gravel it lies at considerable depth. In some localities these ridges are broken into rounded or elongated heaps from twenty to sixty feet in height, to which the name "hog's-back" is frequently applied. The ridges, "hog's-backs," and knolls usually exhibit an irregular and oblique stratification of beds of sand, gravel, and occasionally boulders.

A section of the Wabash Ridge at Wapakoneta, taken by Mr. Winchell, exhibits the arrangement of the materials in most of them. Commencing at the base and proceeding upward, the following order was noted:—

1. Unassorted sand and gravel, two feet.
2. Unassorted sand and gravel, four feet.
3. Stratified sand, the beds broken by lenticular beds of unassorted sand and gravel, one to four feet.
4. Unassorted gravel and sand, with some rounded stones a foot in diameter, one to four feet.
5. Damp sand with some gravel, one foot.
6. Unassorted sand and gravel, one to four feet.
7. Rusty surface soil, one foot.

Prof. Newberry, in writing on the Surface Geology of Ohio, says: "It seems that in the period of the greatest submergence the larger part of the summit of the watershed was under water, and was swept by breakers and shore waves, in which some of the beds of sand and gravel were formed." He further says that additional materials, composing the ridges and knolls, were derived from icebergs stranding on the shoals, which now form the crest of the divide. His theory accounts in a more satisfactory manner than most theories do, for the presence of the large boulders found on the summits of the ridges and knolls. He further says: "At this time a sufficient depth of water existed in the passes of the watershed to float icebergs of considerable size; and as currents flowed through these passes, some of the boulders scattered over southern Ohio were probably transported by them. When the water level had been somewhat depressed by the slow elevation of the continent, these gaps became, as I have supposed, waste weirs, through which powerful streams of water continued to flow for a long time, cutting the gaps deeper, and transporting great quantities of gravel and boulders, and depositing them in lines which traversed the valley of the Ohio." Five passes are described, the first being the one traversed by the Miami Canal at the St. Mary's summit. This has a level of 367 feet above Lake Erie, and connects the valleys of the Maumee and Miami. The second is the one through which the waters of Muchinippi Swamp flow into the Scioto River. All the lines of drainage leading southward from these passes

are marked by deeply excavated channels, now, more or less perfectly, filled by accumulations of rolled and transported material."

The foregoing hypothesis accounts in a satisfactory manner for the numerous small ponds without outlets, found in the county. They were, without much doubt, produced by the dipping down of icebergs when thrown out of balance, by melting, or other causes. Some of them were produced, no doubt, by the grounding of bergs, as the rims of gravel and boulders in some instances seem to indicate.

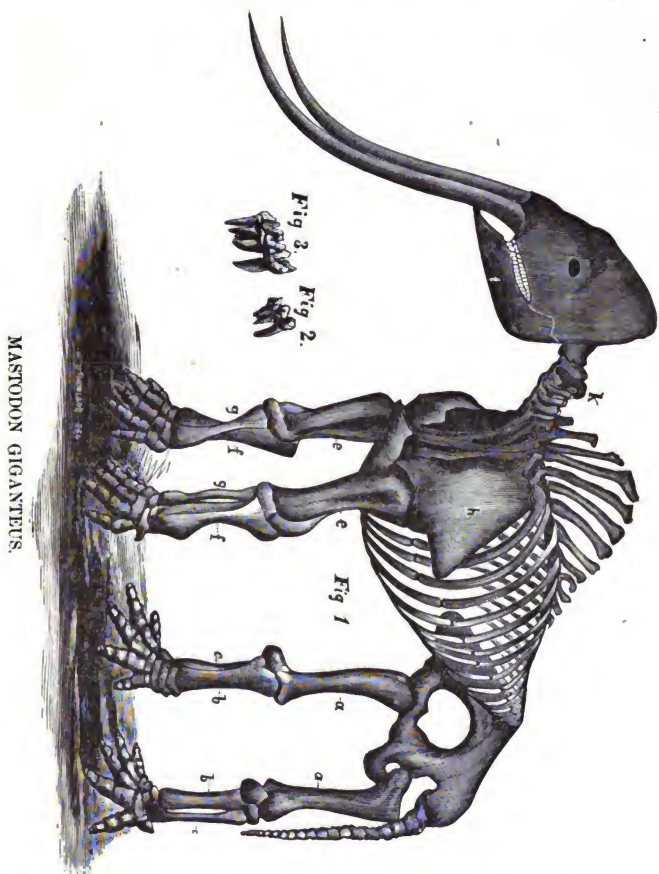

After the emergence of the land from the last great body of water that covered it, the new surface abounded in irregularities, depressions, and basins, which afterward became ponds, swales, and swamps. The numerous ponds and swamps scattered over the country were stocked with fresh-water mollusks. The shells of these mollusks, and the precipitated carbonate of lime formed, what is known as fresh-water shell marl. In the marl, thrown from a ditch on the farm of Thomas Baggs, in Clay township, the following shells have been identified: *Lymnea*, *Planorbis*, and a species of *Cyclas*. The same varieties have been identified in the marl taken from the bottoms of ponds in other sections of the county. The time will probably come when these shell deposits will become of considerable economical value as a fertilizer. These marl beds are generally overlaid by beds of peat or muck, composed principally of vegetable matter, and usually still in process of formation.

After the close of the Drift Period when the land had become dry, and covered with vegetation, "it is probable, that animals of various kinds appeared, and made the interior their home. It is quite probable, too, that some of them returned from places south of the Glacial area, where they and their ancestors had lived during the Drift Period."

BONES OF MASTODONS. - Conspicuous among the animals, whose remains are found in Ohio, are those huge mammals, the Mammoth and Mastodon. Three of the latter species of animal have been discovered in Auglaize county.

The first skeleton was discovered in the fall of 1870 in Clay township, two and a half miles east of the village of St. John's, by some laborers engaged in excavating a ditch through Muchinippi Swamp. The depth of the swamp, at the point at which the discovery was made, is about eight feet, of which the upper third is of peat, and the remainder of marl, or marly clay. The bones were found in a posture natural to a quadruped when sinking in the mire. The head and tusks were thrown upward and the right forefoot thrown forward, as in the act of walking.

The writer visited the locality on the Monday following the discovery, and before the removal of the bones of the lower extremities from the ground. A careful examination was made of the position of the animal, and measurements taken of the length of the body, neck, head, and circumference of the tusks. The accompanying engraving repre-

sents the entire skeleton of the Mastodon discovered in 1845, in a marsh near Newburgh, New York, and now in possession of Dr. J. C. Warren of Boston. The parts lettered in the engraving represent the parts of the Clay township Mastodon found, and now in the writer's possession. The body was seventeen and one-half feet long, from where the tusks

entered the cranium to the base of the tail; and the head, as near as could be ascertained, was between four and five feet long.

"Dr. Warren's specimen is eleven feet high, and seventeen feet long to the base of the tail. The length of the tusks is twelve feet, of which two and one-half feet are inserted in the sockets. The estimated height of the animal, when living, was from twelve to thirteen feet, and the whole length, adding seven feet for the horizontal projection of the tusks, from twenty-four to twenty-five feet."

A comparison of the length of the bones of the Clay township Mastodon with the Newburgh specimen, shows the former to be the larger of the two. It was probably a foot higher, and from one to two feet longer.

The tusks and most of the vertebrae, ribs, and pelvis, were so much decayed, that they crumbled to pieces on exposure to the air. The following are the portions of the skeleton found:—

Lower Jaw. (l).—The anterior portion of the lower jaw, preserved, has the form of a ∇ , and is about eighteen inches long, terminating anteriorly in a horn five inches in length

Tusks.—The circumference of one of the tusks at the point where it entered the cranium was twenty-two inches—their length was not ascertained.

Teeth.—There were four of the lower jaw teeth found, all of them in an excellent state of preservation. The two anterior teeth (Fig. 1) each weigh four and one-half pounds, and are seven and one-half inches long by three and one-half inches in width. They each have three transverse furrows dividing them into four nipples or eminences, each eminence being one and one-half inches in height. The two posterior teeth (Fig. 2) are each four and one-half inches long, by three and one-half inches in width. Each of these teeth has three transverse ridges, measuring one and one-fourth inches in height. The enamel is of a dark brown color, one-eighth of an inch in thickness, and not much worn. The roots are four and one-half inches long, and of a form that exhibits great strength.

Humerus (e).—This is the upper bone of the foreleg. Its length is thirty-seven inches, its greatest circumference thirty-five inches, and its smallest seventeen inches.

Ulna (f).—This is the larger of the bones of the lower part of the foreleg. Its length from the summit of the olecranon process to the lowest point of the inferior extremity is thirty-four inches, circumference at lower extremity thirty-one inches

Radius (g).—The smallest bone of the foreleg. Its length is twenty-nine inches, the breadth of its carpal extremity six inches, and the entire circumference of the elbow joint is forty-five inches.

Femur, or Thigh-bone (a).—This bone in its form resembles the femur of the human skeleton. It is thirty-nine inches long and seventeen and one-half inches in circumference at the middle of the shaft.

Tibia (b).—The larger of the two lower bones of the hindleg is twenty-eight inches long. The circumference of the upper extremity is thirty and one-half inches, the middle of the shaft fourteen inches.

Fibula (c).—This is a slender bone, twenty-seven inches long, passing three and one-half inches below the tibia to form part of the foot.

Bones of the Feet.—All the bones of the right forefoot and right hind-foot were found, also portions of the other two feet.

Mastodon No. 2.—Part of the bones of another Mastodon was found in Clay township, in December, 1874, by some men engaged in digging a ditch to drain Muchinippi swamp. The ravine in which the animal was found, and through which the ditch was dug, partakes somewhat of the character of the swamp. The depth of the superficial deposit at the point at which the remains were found is about six feet. The upper third is black muck, and the remainder shell marl.

The marl thrown out of this ditch, after a few months' exposure to the air, becomes so white as to form a strong contrast with the inky surface soil. The following are the portions of the skeleton found:

Tusks.—Two tusks twenty-eight inches in circumference at the base, and twelve feet long.

Teeth.—Three teeth, two of them in a good state of preservation.

Vertebræ.—6 Cervical (*k*),

2 Dorsal.

Extremities. - 1 Humerus (*h*),

1 Femur,

1 Tibia,

1 Ulna,

1 Radius,

2 Patellæ,

3 Bones of the feet.

The bones of this specimen are much larger than the corresponding ones of the specimen found in 1870, and are probably those of an old animal, as the teeth are very much worn. The remains were purchased by the writer, and deposited in the museum of the Heidelberg College of this State.

Mastodon No. 3.—A third Mastodon was discovered by Mr. Samuel Craig, in January, 1878, whilst engaged in surveying in Washington township. No careful search for the skeleton has yet been made. The boggy character of the ground in which the animal is located leads us to believe that the remains will be found in a good state of preservation.

The first and second Mastodons were found so near the surface that we are almost led to the belief that they have been buried within 500 or 1,000 years. "There can be no question that they lived and died long after the deposition of the drift on which the marsh deposits rest."

IRON, STEEL,
MINES, MINING, MANUFACTURING,
BUILDING,
LABOR AND COMMERCIAL INTERESTS OF OHIO.

PRELIMINARY REPORT ON THE IRON AND STEEL INDUSTRIES OF THE UNITED STATES.

BY JAMES M. SWANK,
Special Agent to Collect the Statistics of Iron and Steel.

[Tenth Census of the United States.]

The branches of the iron and steel industries of the United States which were committed to my care, in accordance with the provisions of the act of Congress authorizing the Tenth Census, embrace (1) blast-furnaces and their products, (2) rolling-mills and their products, (3) steel-works and their products, (4) and forges and blomaries and their products. The products of the blast-furnaces embrace pig-iron and a few furnace castings; the products of the rolling-mills embrace all rolled iron and such other finished iron articles as a few of the mills make a specialty of producing; the products of the steel-works embrace steel of every description in its crude state, and finished steel in various forms; the products of the forges embrace blooms made from pig and scrap iron; and the products of the blomaries embrace blooms and hammered bar-iron made directly from the ore. In giving these products the net ton of 2,000 pounds will be invariably used.

NUMBER AND CAPACITY OF THE IRON AND STEEL WORKS OF THE UNITED STATES.

The following exhibit shows the number and capacity of the blast-furnaces, rolling-mills, steel-works, forges, and blomaries in the United States at the close of the census year, May 31, 1880:

Blast-furnace establishments	490
Completed blast-furnaces	681
Rolling-mill establishments	324
Single puddling-furnaces, each double furnace counting as two single furnaces	4,319
Rotary puddling-furnace (Sellers).....	1
Danks puddling-furnaces.....	19
Hammers in iron rolling-mills.....	239
Heating-furnaces	2,105
Trains of rolls in iron rolling-mills.....	1,206
Nail-machines	3,775
Steel-works.....	73
Bessemer steel converters.....	24
Open-hearth steel-furnaces.....	37
Pot-holes for crucible steel.....	2,691
Trains of rolls in steel-works.....	136
Hammers in steel-works.....	219
Forges and blomaries	118
Forge and blomary fires.....	495

Siemen's rotator.....	1
Hammers in forges and blomaries.....	141
Daily capacity of blast-furnaces in net tons.....	19,248
Daily capacity of rolling-mills in net tons.....	16,430
Daily capacity of Bessemer steel converters in net tons.....	4,467
Daily capacity of open-hearth steel-furnaces in net tons.....	827
Daily capacity of crucible steel-works in net tons.....	445
Daily capacity of forges and blomaries in net tons.....	520

The whole number of establishments in 1880 was 1,005. In 1870 it was 808. The percentage of increase in the ten years was 24.38. The size and capacity of the establishments were, however, much greater in 1880 than in 1870. As the capacity of blast-furnaces only was given in 1870, no complete data are available for a comparison of the capacity of all the works in the two periods. The daily capacity of the blast-furnaces in 1870 was 8,357 tons, and in 1880 it was 19,248 tons—an increase of 130.32 per cent. A comparison of the number of the various works in 1870 and 1880 is given below :

	1870.	1880.
Blast-furnace establishments	386	490
Blast-furnaces	574	681
Rolling-mill establishments	310	324
Steel-works	30	73
Forges and bloimaries	82	118

CAPITAL INVESTED IN THE IRON AND STEEL WORKS OF THE UNITED STATES.

The whole amount of capital invested in the iron and steel industries of the United States in 1880 was \$230,971,884; in 1870 it was \$121,772,074; increase, \$109,199,810, or 89.68 per cent.

PRODUCTION OF THE IRON AND STEEL WORKS OF THE UNITED STATES.

The total production of the iron and steel works of the United States in the census year 1880 was 7,265,140 tons; in 1870 it was 3,655,215 tons; increase 3,609,925 tons, or 98.76 per cent. The following table shows the production of each branch of our iron and steel industries in 1870 and 1880, with the percentage of increase or decrease in the latter year :

Iron and steel products.	Census year 1870.	Census year 1880.	Percentage of increase in 1880.	Percentage of decrease in 1880.
	<i>Net tons.</i>	<i>Net tons.</i>		
Pig-iron and castings for furnace	2,528,221	3,781,021	84	
All products of iron rolling-mills	1,441,829	2,333,248	63	
Bessemer steel finished products.....	19,403	889,806	4,466	
Open-hearth steel finished products.....		98,143		
Crucible steel finished products.....	28,069	70,319	151	
Blister and other steel	2,285	4,956	117	
Products of forges and blomaries	110,808	72,557		35
Total.....	3,655,215	7,265,140	99	35

Of the pig-iron and furnace castings produced in the census year 1880, there were produced with cold-blast charcoal, 79,613 tons; with hot-blast charcoal, 355,405 tons; with anthracite, 1,112,735 tons; with bituminous coal and coke, 1,515,107 tons; and with mixed anthracite and coke, 713,932 tons. The furnace castings amounted to 4,229 tons. The total production was 3,781,021 tons, of which 12,875 tons were spiegeleisen.

In the following table is presented a comparative statement of iron rolling-mill products in the census years 1870 and 1880:

Kinds of iron.	1870.	1880.
	<i>Net tons.</i>	<i>Net tons.</i>
Bar iron.....	488,844	663,211
Rod-iron.....	26,087	145,626
All kinds of plate-iron.....	284,702	437,139
Sheet-iron.....	74,753	94,992
Iron rails.....	531,805	466,917
Skelp-iron.....	2,217	128,321
Muck-bar made for sale to other works.....	33,631	64,469
Other products.....		352,573
Total.....	1,441,829	2,853,246

The item of muck-bar is an unavoidable duplication, as it undoubtedly reappears as finished iron to be counted a second time. Further details of the rolling-mill products in the census year 1870 than have been given above cannot be ascertained.

The 352,573 tons of "other products" in the column for 1880 include 96,810 tons of structural iron; 2,630 tons of rolled axles; 96,843 tons of hoop-iron; 48,345 tons of fish-plates and miscellaneous forms of rolled iron; 82,358 tons of railroad spikes, wire, horseshoes, rivets, etc., made in rolling-mills that rolled the bar and rod iron of which they were manufactured, but which iron is not duplicated in this statement; 21,884 tons of hammered axles; and 3,703 tons of forgings.

In the Bessemer and open-hearth steel-works of the country, the following finished products were produced in the census year 1880:

Finished products.	Bessemer steel.	Open-hearth steel.
	<i>Net tons.</i>	<i>Net tons.</i>
Rails.....	741,475	9,105
Bars.....	76,710	43,296
Rods.....	49,064	1,134
Shapes.....	557	80
Sheets.....		1,700
Plates.....	1,475	11,094
Other forms.....	20,615	26,794
Total.....	889,896	93,143

The Bessemer and open-hearth steel-works in the census year 1880, produced 985,208 tons of Bessemer steel ingots, and 84,302 tons of open-hearth steel ingots.

GEOGRAPHICAL DISTRIBUTION OF THE IRON AND STEEL INDUSTRIES OF THE UNITED STATES.

The whole territory of the United States may be regarded as comprising four grand divisions—the Eastern States, the Southern States, the Western States and Territories, and the Pacific States and Territories. Assuming that the Eastern States comprise all of the States lying north of Delaware, and east of Ohio, that the Southern States comprise all of the late slaveholding States except Missouri, and that the other divisions require no explanation, we present the following comparative statement of the development of the iron and steel industries in each of the grand divisions in the census year 1880:

Grand divisions.	Number of establishments.	Capital invested.	Hands employed.	Wages paid.	Net tons produced.	Value of all products.
Eastern States.....	556	\$149,507,461	82,842	\$34,861,690	4,671,808	\$192,696,010
Southern States.....	218	29,145,830	20,595	6,261,344	649,153	25,353,251
Western States and Territories.....	224	50,755,900	36,063	14,542,587	1,912,689	76,983,686
Pacific States and Territories.....	7	1,562,603	878	311,194	31,490	1,574,788
Total United States.....	1,005	\$230,971,884	140,978	\$55,476,785	7,265,140	\$296,557,685

In 1870 there were twenty-five States engaged in the manufacture of iron and steel. Of these South Carolina does not appear in the statistics for 1880. Its total production in 1870 did not aggregate 500 tons. The iron industry in this State has been practically abandoned. Since 1870 three States have, for the first time, engaged in the manufacture of iron, namely, Colorado, Kansas, and Nebraska; also two Territories, namely, Utah and Wyoming. Utah did not, however, make any iron in 1880. It made a small quantity in each of the years 1874, 1875, and 1876, and it will make a larger quantity in the near future. California and Washington Territory have made arrangements since the close of the census year 1880 to manufacture iron. New Hampshire made iron many years ago, but it does not appear in the statistics for 1870; it reappears in the tables for 1880. Oregon and Texas, each built a blast-furnace in the decade preceding the census year 1870, but they did not make any iron in that year; they appear, however, in the statistics of production for 1880. The District of Columbia once had a blast-furnace in operation, but in 1870 it had no iron industry whatever; in 1880 the United States Government owned and operated a small rolling-mill at the Washington navy-yard. Minnesota appears in 1880 for the first time among iron-manufacturing States, but its statistics relate only to the preparations that have been made to embark in the business. Thirty States, the District of Columbia and Wyoming Territory, actually made iron in 1880.

COMPARATIVE PRODUCTION OF ALL THE STATES IN 1870 AND 1880.

Twelve States made over 100,000 tons each in 1880. Pennsylvania, which for more than a hundred years has been the leading iron-producing State in the Union, made in 1870 a fraction over 50 per cent. of the total product, and in 1880 it made a fraction over 49 per cent. At both periods its prominence in the production of iron and steel was virtually the same. From 1870 to 1880 it increased its production 97 per cent., or from 1,836,808 tons to 3,616,668 tons, while the whole country increased its production 99 per cent., or from 3,655,215 tons to 7,265,140 tons. Ohio was the next State in prominence in 1870, and it held the same rank in 1880. In the former year it produced 449,768 tons, and in 1880 it produced 930,141 tons, an increase of 107 per cent. The third State in prominence in 1870 was New York, and it maintained this rank in 1880, but its growth fell far below that of its two sister States above mentioned. In 1870 it produced 448,257 tons, and in 1880 it produced 598,300 tons, an increase of 33 per cent. New Jersey was fourth in rank in 1870, producing 115,262 tons, but it was fifth in 1880, although in that year it produced 243,860 tons, an increase of 112 per cent. The fourth place in 1880 was taken by Illinois, which produced in 1870 only 25,761 tons, while in 1880 it produced 417,967 tons, an increase of 1,522 per cent. Maryland ranked fifth in 1870, producing 95,424 tons in that year, while in 1880 it produced only 110,934 tons, an increase of 16 per cent., causing it to

drop to the twelfth place. The sixth State in rank in 1870 was Missouri, with a production of 94,890 tons, which was increased to 125,758 tons in 1880, or 33 per cent., giving it the tenth place in that year. Michigan increased its production in the ten years from 86,679 tons to 142,716 tons, or 65 per cent., taking the eighth place in rank in 1880. Wisconsin increased its production from 42,234 tons to 178,935 tons, or 324 per cent., giving it the sixth place in 1880. Indiana produced 64,148 tons in 1870 and 96,117 tons in 1880, an increase of 50 per cent. Of the New England States, Massachusetts shows the greatest growth in the ten years, increasing from 86,146 tons in 1870 to 141,321 tons in 1880, or 64 cent., placing it ninth in rank. Astonishing progress was made in the ten years in several Southern States. West Virginia increased its production from 72,337 tons to 147,487 tons, or 104 per cent., giving it the seventh place in 1880. Alabama increased from 7,060 tons to 62,986 tons, or 792 per cent. Georgia increased from 9,634 tons to 35,152 tons, or 265 per cent. Tennessee increased from 34,305 tons to 77,100 tons, or 125 per cent. Kentucky increased from 86,732 tons to 123,751 tons, or 43 per cent., placing it eleventh in rank in 1880. Delaware increased from 8,307 tons to 33,918 tons, or 308 per cent. Virginia increased from 37,836 tons to 55,722 tons, or 47 per cent. All the States which made iron or steel in 1870 increased their production in 1880, except Maine, North Carolina, and South Carolina.

The relative rank in production of all the States in 1870 and in 1880 is given in the following table:

States.	Production, 1880.	Rank.	States.	Production, 1870.	Rank.
Pennsylvania	3,616,668	1	Pennsylvania	1,836,808	1
Ohio	930,411	2	Ohio	449,768	2
New York	598,300	3	New York	448,257	3
Illinois	417,067	4	New Jersey	115,262	4
New Jersey	243,860	5	Maryland	95,424	5
Wisconsin	178,935	6	Missouri	94,890	6
West Virginia	147,487	7	Kentucky	86,732	7
Michigan	142,716	8	Michigan	86,679	8
Massachusetts	141,321	9	Massachusetts	86,146	9
Missouri	125,758	10	West Virginia	72,337	10
Kentucky	123,751	11	Indiana	64,148	11
Maryland	110,934	12	Wisconsin	42,234	12
Indiana	96,117	13	Virginia	37,836	13
Tennessee	77,100	14	Tennessee	34,305	14
Alabama	62,986	15	Illinois	25,761	15
Virginia	55,722	16	Connecticut	25,305	16
Connecticut	38,061	17	Maine	17,128	17
Georgia	35,152	18	Georgia	9,634	18

Vermont	6,620	26	Kansas		
Colorado	4,500	27	Territory of Wyoming		
Oregon	3,200	28	New Hampshire		
Nebraska	2,000	29	Colorado		
Texas	1,400	30	Oregon		
North Carolina	439	31	Nebraska		
District of Columbia	264	32	Texas		
South Carolina			District of Columbia		

CENTERS OF IRON AND STEEL PRODUCTION IN THE UNITED STATES IN 1880.

In the following table is presented a view of the principal "centers" of production of the iron and steel industries of the United States in the census year 1880. These "centers" are divided into two classes—the first comprising all counties which

produced over 100,000 net tons of pig iron and finished products, and the second comprising all counties which produced over 60,000 and less than 100,000 tons. In the first class are fifteen counties, and in the second class are seventeen counties. Six States are represented in the first class, and eight States in the second class.

COUNTIES OF THE FIRST CLASS, PRODUCING OVER 100,000 TONS OF PIG-IRON, ROLLED IRON, STEEL, AND BLOOMS.

No.	Counties.	Net tons.
1	Allegheny County, Pa	848,146
2	Lehigh County, Pa	324,875
3	Northampton County, Pa	322,882
4	Cambria County, Pa	260,140
5	Cook County, Ill	248,479
6	Dauphin County, Pa	223,676
7	Mahoning County, Ohio	219,957
8	Berkshire County, Pa	213,580
9	Cuyahoga County, Ohio	210,354
10	Mercer County, Pa	182,881
11	Rensselaer County, N. Y	177,967
12	Montgomery County, Pa	168,628
13	Lackawanna County, Pa	151,273
14	Milwaukee County, Wis	128,191
15	Saint Louis County, Mo	102,644
Total (15 counties).....		3,783,673

COUNTIES OF THE SECOND CLASS, PRODUCING BETWEEN 60,000 AND 100,000 TONS OF PIG-IRON, ROLLED IRON, STEEL, AND BLOOMS.

No.	Counties.	Net tons.
1	Lawrence County, Pa	88,443
2	Lancaster County, Pa	87,019
3	Ohio County, W. Va.	84,767
4	Will County, Ill	84,094
5	Montour County, Pa	79,789
6	Chester County, Pa	78,263
7	Warren County, N. J.	76,622
8	Trumbull County, Ohio	73,969
9	Lebanon County, Pa	73,149
10	Lawrence County, Ohio	70,794
11	Schenck County, Pa	70,609
12	Baltimore County, Md	69,944
13	Blair County, Pa	68,089
14	Essex County, N. Y	66,725
15	Philadelphia County, Pa	65,983
16	Wayne County, Mich	63,548
17	Dutchess County, N. Y	61,637
Total (17 counties).....		1,262,894

THE CENTER OF TOTAL PRODUCTION.

The geographical center of production of the iron and steel industries of the United States, in the census year 1880, has been made the subject of a very careful calculation by Mr. George W. Cope, my principal assistant in the collection of the statistics which are condensed in this preliminary report. The center of production is the point at which equilibrium would be reached were the country taken as a plane surface, itself without weight but capable of sustaining weight, and loaded with its production of iron and steel, each ton exerting pressure on the pivotal point directly proportioned to its distance therefrom.

The center of production of iron and steel in the United States, in the census year 1880, was found to be at 40° 43' north latitude and 79° 20' longitude west from Greenwich. This point is in the State of Pennsylvania, on the boundary line between Armstrong and Indiana counties, and about 12 miles northeast of Apollo and 12 miles west of the town of Indiana—Laufman & Co.'s rolling mill at Apollo being the nearest iron-works. At the center of production thus ascertained iron has never been manufactured in any form.

MINERAL PRODUCTS USED BY THE IRON AND STEEL WORKS OF THE UNITED STATES.

It is necessary to explain that the figures of "hands employed" and "wages paid" refer to the labor directly employed at the various iron and steel works of the country and in the mining and other operations conducted in direct connection with these works. They do not include the labor employed in independent and often remote mining operations which supply our iron and steel industries with ore and coal and other raw materials. The statistics of these operations are being compiled by other hands. If the "hands employed" and "wages paid" in these independent mining operations were added to the figures given in our tables, the total number of persons directly supported by our iron and steel industries in 1880, and the total amount of wages paid to them would be largely increased. This will be made plain by the presentation in the following table of the quantities of mineral products used by the iron and steel works of the country in 1880:

Works.	Iron ore.	Limestone	Anthracite coal.	Bituminous coal.	Coke.
	<i>Net tons.</i>	<i>Net tons.</i>	<i>Net tons.</i>	<i>Net tons.</i>	<i>Net tons.</i>
Blast-furnaces	7,256,684	3,169,149	2,615,182	1,051,753	2,128,256
Rolling-mills	363,959		526,126	3,915,377	14,834
Bessemer and open-hearth steel-works.....	7,327		140,458	465,655	104,990
Crucible steel-works	2,128		40,392	224,657	22,791
Forges and bloomeries.....	79,610		340	1,613	6,986
Total	7,709,708	3,169,149	3,322,498	5,659,055	2,277,855

Of the iron ore and limestone given in the table, at least one-half was purchased from independent producers; of the anthracite coal, nearly all was so purchased; and of the bituminous coal and coke, fully two-thirds was so purchased.

CERTAIN RAW MATERIALS USED IN THE MANUFACTURE OF IRON AND STEEL.

To the above are added below, tables showing the quantities of all other leading raw materials used in the census year 1880 in the manufacture of iron and steel.

Works.	Bushels of charcoal.	Mill cinder.	Pig-iron.	Old iron rails.	Scrap-iron.	Ore blooms.	Pig or scrap blooms.	Muck-bar purchased.
		Net tons.	Net tons.	Net tons.	Net tons.	Net tons.	Net tons.	Net tons.

THE
TRADE AND COMMERCE
OF
CINCINNATI,
1879-80.

GENERAL REVIEW OF THE TRADE AND COMMERCE OF CINCINNATI.

BY SIDNEY D. MAXWELL,
Superintendent of Cincinnati Chamber of Commerce.

[From the Annual Report of the Superintendent of the Cincinnati Chamber of Commerce.]

There has never been a period in the history of Cincinnati that brought it with more favorable circumstances, nor one that was more replete with cheering promises for the future, than the past year. The marked improvement which was witnessed at the conclusion of the preceding year proved to be the precursor of a permanent change, in which all the working forces of the city were to have full participation. There was one unfavorable feature to the period, which was the tendency to stimulation in prices beyond what the facts warranted. Good crops, a large balance of trade in our favor in our intercourse with foreign countries, the country fully returned to specie payment, plenty of money at low prices, an unexampled demand for almost all kinds of manufactured goods, an increase in the business of railroads which was almost phenomenal, and the general conviction that we had entered on a period of much better times, which would manifestly last for years, were all calculated to stimulate prices, which through the long period of pressure had been reduced to the lowest possible point. This was witnessed in nearly all departments of business. In some, it soon drifted into an excitement, which, fanned by speculation, carried prices to a dangerous elevation, and laid the foundations for a general and destructive collapse, had not favorable circumstances intervened to arrest its progress and bring about an early reaction. The high prices at last invited heavy importations from foreign countries, and thus prepared the way for a declension, which quickly followed. In some branches of business the decline was as rapid as had been the advance, and proved to be a great blessing. The immediate effect was to check business, so that there was in many branches a condition of dullness which led some to suppose that the country was going back to the previous condition of inactivity and business uncertainty, which had marked the years of shrinkage that followed the general collapse of

1873. It, however, was business hastening merely to correct the mistake into which it had fallen, and the capacity of the business forces of the country was not permanently impaired. Perhaps the most favorable aspect of the whole experience was the sudden check encountered by speculation, that had taken hold of nearly all classes, and which, with a tardy remedy, would have planted the seeds for an abundant crop of commercial reverses. It was quite noticeable that there were no failures in this city growing out of the decline in prices. The opening of the Southern Railway for through business was an event which gave the year exceptional interest, because it was the culmination of causes which had been at work for more than thirty years, and because it brought business, even under disadvantageous circumstances, which surprised even its friends. All our transportation interests have shown remarkable vigor. Our railroads have had a season of singular prosperity, in which the physical condition of the roads has been improved, the facilities for the transaction of business increased, and the general value of the property augmented. To the river interest the year has been one also of business success. The boats plying between Cincinnati and other ports have generally done well, having not only increased the quantity of freight transportation, but received better returns for the work performed. In nearly all branches of commerce there has been marked increased business, beyond that which came from such advances in prices as may have been experienced. The aggregate sales of the wholesale dry goods dealers reached \$23,637,531. That these figures represent a much larger business than Cincinnati has ever done there can be no doubt, for it must be kept in mind, that, in the abnormal period of the war, a given price represented a much smaller quantity of goods. It will only be necessary to remember the high prices of that inflated period, to see on what a different basis we are now transacting business. With standard brown sheetings at seventy-five cents per yard, how much less real physical substance was represented by one dollar than when they were down to 7 @ 9½ cents per yard, which was the extreme range in the past year, or with standard prints at forty-five cents, however different the basis of measurement from the period which finds them down to 6½ @ 8 cts. per yard. While in many departments of trade, proper, the difference in prices was not so great, it was still so marked in all, as to make a given sum of currency represent a very much larger quantity of merchandise in the past year than at any time during the inflated period of the war, with its abnormal prosperity. In wholesale clothing, our sales in the past year aggregated \$15,334,030, which, beyond any question, was the largest business ever done in Cin-

cinnati. The same is true of nearly the whole range of our business departments. In this city, however, which is mainly an industrial one, and which produces largely what it distributes, it is difficult to separate the commerce proper from the business which depends immediately on our manufactures. Thus, all, practically, of our clothing sold here at wholesale is manufactured here. The same is true concerning our provisions, whisky, furniture, carriages, wood-working machinery, wire goods, brushes, starch, candles, soaps, lard oil, cigars, saddlery, harness, burial goods, etc. It is true, in a great degree, of boots and shoes, stoves, tobacco, school, law, medical and miscellaneous books, crockery, glass-ware, silver-ware, jewelry, white lead, paints, chemicals, railroad supplies, picture frames, leather, flour, candies, cordage, twine, brooms, wooden-ware, ground spices, canned fruits and vegetables, crackers, and a great array of articles in which the thousands of working people are engaged in producing in this busy city. There is, therefore, such an interlacing of trade and production, that it is sometimes quite impossible to tell where the one ceases and the other begins.

The movement of grain was the largest in the history of this city, the receipts having aggregated 13,697,234 bushels, with an aggregate value of \$9,791,644, compared with 11,263,275 bushels and a value of \$6,849,787 in 1878-79, and 7,600,432 bushels and a value of \$6,812,288, five years ago. The shipments in the past year aggregated 6,350,975 bushels, with a value of \$5,792,359, compared with 5,022,591 bushels and a value of \$4,149,590 in 1878-79, and 1,570,757 bushels and a value of \$1,544,056, five years ago, showing a development which is exceedingly encouraging to the grain trade of this city, and especially exhibiting great growth in our distribution. If to these figures were added the through shipments not embraced therein, it would swell the increased movement here in the past year to 21,396,846 bushels, compared with 18,151,595 in 1878-79, and 15,950,597 in 1877-78, and the outward movement to 14,050,587 bushels in 1879-80, 11,910,911 in 1878-79, and 9,283,508 in 1877-78.

The business in provisions, while not disastrous, was not favorable. It turned out to be a discouraging year to our packers, and the general movement shows a decrease. The shipments of the hog product of all kinds aggregated 124,611,380 pounds, representing a value of \$9,059,451, compared with 157,537,933 pounds and a value of \$9,008,517, and the receipts 33,661,172 pounds, with a value of \$2,234,408, in comparison with 30,343,798 pounds and a value of \$1,670,213 in 1878-79. The whole number of hogs packed in the winter season of 1879-80 was 534,559

head, in comparison with 623,584 in the previous year, with an aggregate cost of \$6,207,587, in comparison with \$4,790,319 in 1878-79.

The possibilities of Cincinnati in the iron field were never so clearly or encouragingly revealed as in the past year. It was, however, a year of intense excitement, great speculative feeling, and dangerously inflated prices, followed by a speedy reaction and a marked decline. The business exceeded any previous year. This was specially manifest in the pig iron trade, the sales of which, from first hands, to go into actual consumption, aggregated 248,519 tons, compared with 212,281 tons in 1878-79, and 125,912 tons in 1877-78, with an aggregate value of \$8,708,105 in 1879-80, \$4,583,146 in 1878-79, and \$2,875,830 in 1877-78. As showing, in some degree, the increase in the distribution of pig iron from this city, it may be stated, that, in the past year, the pig iron absolutely shipped from this city, not in any way embracing the large quantity of iron which was sold here for direct shipment from the furnaces to the place of consumption, was 64,409 tons, while twenty years ago it was 4,667 tons. The receipts of manufactured iron, not embracing that reported in bundles and pieces, aggregated 144,013 tons, compared with 68,528 tons in the preceding year, and the shipments, 90,453 tons, compared with 62,980 in 1878-79. The year, in general, was one of great activity among all the furnaces of the districts tributary to this city which could be utilized, and was very favorable, notwithstanding the great decline in prices, to such as were well supplied with raw materials at the commencement of the year. Our stove manufacturers have had a year of great activity, and an increased business, while the business in nails has never before been equaled, the receipts having aggregated 532,933 kegs, compared with 509,164 in the previous year.

The year, to the cotton business of Cincinnati, has been, in the main, satisfactory, though there was considerable complaint in relation to freight discriminations in this staple, concerning which the cotton interest here had much solicitude. The figures show that Cincinnati has had a fair proportion of the inland cotton movement, the receipts of the year having aggregated 312,319 bales, in comparison with 248,069 in 1878-79, and the shipments 308,616 bales, in comparison with 244,532. The aggregate approximate value of the receipts in the past year was \$17,371,182, compared with \$12,155,381 in the preceding year, and the shipments \$17,473,837, in comparison with \$12,165,467.

The grocery trade of the city has been good, encouragingly so, and, though the actual increase in aggregate value may not have been as marked as has been witnessed in some other departments, because of this branch of business having been earlier affected favorably in the

previous year, the year's work has been very satisfactory. There has been considerable development along the line of the Cincinnati Southern Railway and the district opened up by that great highway, which, doubtless, will be more marked in the future than the past. The aggregate receipts of coffee at Cincinnati for the year was 250,454 bags, in comparison with 222,399 bags in the previous year; of sugar, the equivalent of 237,678 barrels, compared with 286,341; and of molasses and syrups of all kinds, 52,327 barrels, in comparison with 42,337. The approximate aggregate value of coffee, molasses, rice, and sugar, for the year, was \$13,484,378, in comparison with \$11,674,191 in the previous year. In this connection it might be remarked, that more attention has been given the importation of teas, and arrangements have been completed to again do the same thing in coffee.

The tobacco business of the city, both in the quantity of the leaf which has changed hands and that which has been manufactured, has exceeded any previous year. The entire receipts of leaf tobacco aggregated 88,965 hogsheads and 17,813 cases and bales, in comparison with 78,137 hogsheads and 15,932 cases and bales in 1878-79, with an aggregate value of \$14,000,150 in the past year, compared with \$8,832,342. The receipts at the warehouses consisted of 43,932 hogsheads and 5,363 boxes, compared with 35,511 hogsheads and 4,932 boxes. The production of chewing tobacco makes a larger showing than ever before, our manufacturers having turned their attention more to plug tobacco than previously, and been re-enforced by two large manufactories during the year. There were manufactured in the late year, in Cincinnati, Covington and Newport, of fine cut and plug tobacco, 5,270,133½ pounds, compared with 4,642,211½ pounds in the previous year, an increase of 627,921½ pounds. There were made, in the same places, 119,243,325 cigars and cigarettes, in comparison with 98,389,000, an increase of 20,854,325. The total federal taxes paid on manufactured tobacco of all kinds, in the three cities, were \$1,852,603.40, compared with \$1,995,311.17 in the previous year, the diminished receipts having been the result of the reduced taxes imposed under the amendment to the revenue laws, which went into operation late in the preceding commercial year.

The whisky business of this city, in the past year, has more to show than it has ever experienced, so far as the quantity is concerned, while it has also had one of the most remunerative and satisfactory years enjoyed in a long period. The distilled spirits produced in Cincinnati and the adjacent Kentucky cities was 14,927,575.67 proof gallons, compared with 12,684,922.80, a gain of 2,242,652.87 gallons over the previous year. The production in Hamilton county was double what it was eight years

ago. But, to ascertain the actual amount of business transacted, there should be added to the production here the receipts from other localities, which would swell the quantity produced and actually handled here in original packages to 22,523,310 gallons, with an aggregate approximate value of \$26,490,226, compared with 19,345,290 gallons, and a value of \$22,271,386. The business of re-distilling, rectifying, etc., which, in Cincinnati and Covington, represents nearly one-third of the entire business of the United States, should also be coupled with that of the production of distilled spirits. The total quantity rectified in Cincinnati and Covington was 15,004,735.93 proof gallons, compared with 12,909,551.94, showing an increase of 2,095,183.99 gallons. The total shipments from this city, which represents the distribution, aggregated, including alcohol, the equivalent of 478,353 barrels, in comparison with 423,366, an increase over 1879 of 54,987 barrels. These figures, however, do not embrace the entire business, for there have been in the past year, large quantities of Bourbon whiskies purchased in bond elsewhere, much of which was sold and shipped directly to the points of consumption, without touching this city. This, in all respects, save the accident of transportation, was the trade of Cincinnati, and would, if incorporated with the remaining figures, very largely swell the colossal aggregate of this influential branch of our city's business.

The receipts of cattle during the past year aggregated 229,451 head, with an aggregate approximate value of \$10,680,990, compared with 182,954 head and a value of \$8,162,176 in the previous year; of hogs 976,741 head, with a value of \$10,980,011, in comparison with 1,067,453 head and a value of \$8,444,835; of sheep, 525,554 head, with a value of \$2,315,627, compared with 404,574 head and a value of \$1,685,590, and of horses and mules 21,733 head, with a value of \$1,488,710, in comparison with 17,998 head and a value of \$1,217,204. The total receipts of live stock were 1,753,479 head, with an aggregate value of \$25,465,338, compared with 1,672,979 head and a value of \$19,509,805.

The year's work, to the coal business of the city, shows not only a marked increase over the preceding year, but the largest business that has ever been transacted in the article at this point. The year was singularly favorable for the transportation of coal by water, and this, coupled with large facilities for the transaction of business, brought here 48,198,246 bushels, or 1,787,230 tons, with an approximate aggregate value of \$4,367,966, in comparison with 34,210,667 bushels, or 1,269,339 tons, in 1878-79, and a value of \$2,599,138. To the whole receipts, the river contributed 44,921,786 bushels, or 93.2 per cent. of the whole, and the railroads 3,276,460 bushels, or 6.8 per cent. The year's experience

has brought fresh demonstration of the importance of the river to this great department of a business on which largely depends many of our most important industries. The shipments to the interior aggregated 10,037,168 bushels, or over one-fifth of the entire receipts, or three times as much as the total receipts by rail. The receipts of coke for the year aggregated 3,251,208 bushels, which, with that manufactured here, would swell the total available resources of coke to 5,151,708 bushels.

The business in candles and soaps, which means mainly the production, for the quantity received from other points is comparatively limited, has shown another year of great activity; it can not be called unusual, for this department of our business has been, for years, distinguished for the vigor of its administration. The shipments of soap for the year, not embracing the large quantity consumed here, aggregated 482,377 boxes, compared with 448,072 boxes in 1878-79. As showing the steady increase, from year to year, in this branch of our business, it may be stated that the shipments have increased 276 per cent. in the last ten years. The increase in the shipments of candles over the previous year has been quite as great as that witnessed in soaps, the shipments having aggregated 258,397 boxes, compared with 222,360 in the previous year.

Both in production and distribution the business in malt liquors has exceeded any preceding year. The production of Cincinnati, Covington and Newport aggregated 708,320 barrels, or 21,957,920 gallons, compared with 606,449 barrels, or 18,799,919 gallons in the previous year. The approximate aggregate value of the production in the late year was \$5,489,480, compared with \$4,699,980. The shipments from the city for the year aggregated 200,887 barrels, or something less than one-third of the entire production, compared with 162,593 barrels in the previous year.

The business in flour was in excess of any preceding year. This was, to some extent, due to the increased production of our own mills; but the general movement shows also a decided increase, the receipts for the year having been 771,900 barrels, compared with 613,914 in the preceding year, while the shipments were 563,564 barrels, in comparison with 398,653 barrels. The aggregate approximate value of the receipts for the past year was \$4,020,634, compared with \$2,728,353.

The year, to salt producers and dealers, has been more satisfactory than for a considerable period, a large production having passed almost directly into consumption, without any considerable friction from competition. The receipts for the year aggregated 349,885 barrels, compared with 281,285 in 1878-79, the receipts having been but once exceeded.

The business in foreign salt, however, shows a falling off, the entire receipts having been 38,455 bags, compared with 52,098. The aggregate approximate value of salt of all kinds received was \$474,581, compared with \$361,511 in 1878-79.

The receipts of hay, by public and private conveyances, were the equivalent of 275,615 bales of the ordinary size, with a value of \$694,549, in comparison with 203,823 bales and a value of \$302,677 in the preceding year. The receipts of bran, middlings, etc., were the largest in the history of the city, having reached 19,161 tons, with an aggregate value of \$261,988, compared with 12,705 tons and a value of \$150,782. The business in grass seeds, too, makes the largest showing in its history here, the receipts of clover, timothy, etc., having aggregated 87,155 bags, with a value of \$811,275, compared with 55,712, and a value of \$424,525 in the preceding year.

There has been a fair increase to the business in foreign fruits, and the year has been a satisfactory one to the trade. The business in domestic dried fruits has considerably fallen off, the entire receipts of apples and peaches having aggregated but 107,462 bushels, compared with 151,665 in 1878-79, and the shipments 83,434 bushels, compared with 88,474. Our receipts of green apples, owing to the short crop in 1879, also showed a marked falling off, having been, by public conveyances, 147,639 barrels, in comparison with 239,275 in the previous year. The shipments, too, show a large reduction, having aggregated 72,345 barrels, compared with 151,618 barrels. The new year, however, with its large crop, will doubtless make a much more favorable showing.

The production of starch in the past year has been very large, and has shown an increase over the preceding year, though it has not been so marked as in some preceding years. The total quantity manufactured for the year was 25,604,091 pounds, in comparison with 24,766,328 pounds in the preceding year, with an approximate aggregate value in 1879-80 of \$840,482, in comparison with \$646,077 in 1878-79. Prices have been much more satisfactory in the past year than for a considerable period. The business has been conducted with characteristic vigor, and the distribution, as formerly, has been in foreign countries as well as in our own.

The business in petroleum also shows an increase over the previous year, though the change has not been so marked as in some other branches of trade. The entire sales of petroleum of all kinds here, from first hands, aggregated 303,627 barrels, compared with 286,804 barrels in the previous year, and 217,274 in 1877-78.

The business in paper here, and the production in the district

tributary to this city, both show a marked increase over the previous year. The list, embracing those mainly in the Miami Valley, numbers forty-one mills, the production of which, in the past year, aggregated 55,409,106 pounds, with an approximate value of \$3,514,100, in comparison with 48,336,918 pounds and a value of \$2,859,768 in 1878-79. To produce these results, there were employed 1,471 hands, with a cash capital used of \$1,803,057, and real estate occupied, valued at \$1,963,498. The entire year's work is a most gratifying one to this now great department of the business of this locality.

To the butter business of the city, the season has been a favorable one. The receipts by public conveyances aggregated 144,017 packages, compared with 126,156 in 1878-79. To these figures should be added the production of butterine or oleomargarine, which in this city reached 903,053 pounds, in comparison with 571,076 pounds in the preceding year. Of the latter, about 90 per cent. was shipped from the city. The business in cheese continues to show a reduction, to which allusion has been made from year to year. The receipts aggregated 99,396 boxes, compared with 104,664 boxes in the preceding year. The receipts of eggs by public conveyance aggregated 140,008 packages, compared with 106,786, which would be greatly swelled by such as come in wagons, of which no account can be kept.

The business in wool, because of the almost unprecedented dullness in this branch of trade in the late summer, shows a reduction in quantity, the receipts having been 22,491 bales, in comparison with 29,771, and yet, because of the largely increased value in the first half of the year, the approximate aggregate value shows an increase, having been \$1,574,370, in comparison with \$1,339,695 in 1878-79. The lumber business of the city has made marked strides during the year, the receipts of hard and soft lumber having aggregated, approximately, 141,000,000 square feet, in comparison with 114,000,000 feet in the previous year. The movement in naval stores also shows an increase, having aggregated, in receipts, 51,633 barrels, in comparison with 41,963. The receipts of lead show a falling off, having been 118,229 pigs, or 9,458,320 pounds, compared with 129,212 pigs, or 10,136,960 pounds.

The business in broom corn also shows an increase, the receipts having aggregated 1,662,918 pounds, compared with 1,441,800 pounds. The shipments of brooms aggregated, approximately, 26,000 dozens. The business in peanuts also exhibits marked increase, the receipts having aggregated 563,770 bushels, compared with 298,340, and the shipments 382,320 bushels, compared with 249,255 in the previous year, the receipts in the past year having, in approximate value, reached \$484,842,

compared with \$298,340 in 1878-79. The receipts of hops aggregated 8,748 bales, with a value of \$621,108, in comparison with 7,982 bales, and a value of \$207,532. The receipts of hemp were 27,769 bales, with a value of \$846,954, in comparison with 32,420 bales, and a value of \$753,765.

The business in both leather and hides has materially increased over the previous year. The year, to the tanners, has been one of the most favorable ones in a long time. All the tanneries of the city have been running to their full capacity, and the results of the year will largely exceed 1878-79. In the new year, on which we have entered, the establishments which have hitherto been engaged in this business will be re-enforced by one of the largest tanneries in this country, which has been in the process of erection during the past year. The business of the dealers also shows an encouraging increase in the volume of trade. The entire supply of hides, including those from animals slaughtered here, was, approximately, 21,028,280 pounds, of which there were shipped, approximately, 8,964,950 pounds. An important feature of the leather business here, is the material growth in the local consumption, coming from our rapidly growing boot and shoe, and harness manufactures. The receipts of leather, for the year, aggregated 41,348 bundles, compared with 36,344 in 1878-79, and the shipments 42,240 bundles, in comparison with 39,965.

The receipts of potatoes for the year aggregated 210,305 barrels, in comparison with 180,209, while there were of beans 41,323 bushels, compared with 36,736 in 1878-79. The receipts of feathers comprised 9,780 sacks, in comparison with 9,789 in the preceding year. The production of cooperage was interfered with by the destruction of one of our great establishments by fire. With this exception, the year was one of unusual activity, and the reconstruction of the establishment burned, on a larger scale than ever, gives renewed promise to the growth of this important branch of our production. The receipts of country cooperage shows material increase, having been 381,726 pieces, in comparison with 334,533 in 1878-79. The shipments of cooperage aggregated 267,416 pieces, compared with 179,845 in the previous year. The winter of 1879-80 having been singularly open, there was no ice put up here, so that, had it not been for the superabundance in the houses, carried over from the two preceding winters, there would have been much difficulty in securing supplies. The quantity brought here from the North was estimated at 30,000 tons, and the aggregate sales were placed at 150,000 tons, with a valuation of \$900,000. There is a growing business here in vegetables, which has been the further stimulated by the

increased facilities for transportation from the South. It is now one of our distinct branches of business, large quantities not only being received, but also shipped to other localities. The same is true of small fruits, which find here abundant distribution, and of fresh fish and oysters. The value of fresh fish received here last year is estimated at \$176,500, and the oysters at \$261,600.

To these specific commodities, a long list of more general articles, which go to make up the great aggregate of our city's business, might be added, in nearly all of which the year has been one of prosperity. In dry goods, notions, clothing, silk and millinery goods, boots and shoes, hardware, drugs, crockery, glass-ware, jewelry, silver-ware, hats and caps, furs, books of all kinds, paper, musical instruments, flowers, carriages, chemicals, confections, paints, oils, and the multitude of articles which can not be measured in any way by packages, there has been a good year's work. All have not prospered alike, but there has been visible, in all, the evidences of increased vigor, though profits, in some instances, may not have been what was desired.

The business of foreign importation, through the Custom House here, shows some increase in the past year over the preceding one, but it has by no means been marked. There appears, however, no reason why, if our merchants desire to make foreign importations, they may not do it much more advantageously through our own office, where the delays incident to the methods of the Government are reduced to the minimum. The changes in the law removing the delays to direct importation at the sea-board ports, and allowing liquors to be imported as other merchandise, were favorable to Cincinnati, and its benefits have already become apparent. The total quantity of merchandise imported here, under the old and new laws, in the last fiscal year, according to the figures of R. H. Stephenson, Esq., Surveyor of Customs at this port, was \$1,092,366, in comparison with \$964,614 in the previous year, showing an increase in actual value of \$127,752, with duties paid thereon of \$474,983.02 in the past year, in comparison with \$412,977.10, an increase of \$62,005.92. Of this amount there were imported under the new law for direct importation, \$998,372, compared with \$896,541, on which duties were paid amounting to \$421,607.17, in comparison with \$374,816.78. The principal increase in goods directly imported has been in musical instruments, manufactures from cotton, china-ware, fancy goods, glass-ware, and steel in sheets, bars, etc.

While an encouraging increase in exhibited in nearly every department of commerce proper, there has been a marked activity in well nigh all departments of production. The industrial forces of Cincinnati never

before exhibited so clearly what an important relation they sustain to the prosperity of this great city. The year has been distinguished among all the years, for the actual physical and pecuniary results it has to show, which are largely in excess of any previous year. Production, in exceptional instances, has been curtailed, and in others seriously arrested, at times, by strikes, while profits, in other departments, have been curtailed by the unnatural stimulation which was given the prices of raw materials, and the decline which quickly followed; but, in the main, the year has been a satisfactory one to manufacturers, not that large profits have been made, for the period of slender margins has not passed away. Profits have improved, but the benefits have mainly come from increased production, and a good, wholesome demand, at fair prices, for nearly all our products. There are no figures, at this stage of the year, showing the actual increase in production, but from nearly every department of business there comes information of a material increase. In some individual instances production has doubled, and the increase, where there has been such, has ranged all the way from 10 per cent. to 100 per cent. in aggregate value. The valuable figures of J. F. Blackburn, Esq., Secretary of the Board of Trade and Transportation of this city, are made up to the close of each calendar year, and are adopted, with reference to our industries, in the tables of manufactures in this report. These figures show an aggregate production in 1879 of \$148,957,280, which was at that period the largest production in our history, that of the preceding year having been \$138,736,165. That the results of the calendar year of 1880 will very largely exceed these figures, there can be no doubt. A careful inquiry into the various industrial walks, leads to the opinion that the production will range from \$175,000,000 to \$200,000,000. The hands employed in 1879, were 74,798. These, too, will be very materially increased, for the skilled labor of the city has never found more constant or ample employment.

While the best measure always, of the growth and trade, is the material itself, measured by pounds, yards, etc., there is still great interest in aggregate values, and though there must be, especially about miscellaneous merchandise, a great deal of approximation, these statements would not be complete without such a summing up of the year's work, as will indicate something of the extent of business from a pecuniary stand-point. Such a summing up of the business will be found in the tables of values, that appear elsewhere. From this it appears that the receipts of specific commodities, other than those which come under the head of general merchandise, such as dry goods, clothing, and a mighty list which find no particular head under which to appear, aggregated in

value \$167,912,902, compared with \$122,026,047, and the shipments \$169,548,267, in comparison with \$132,172,002. It will thus be seen that the value of the receipts of these specific commodities has increased \$45,886,855, and the shipments \$37,376,265. If to these figures were added the approximate value of merchandise having no specific head, it would swell the receipts in the past year, approximately, to \$256,137,902, compared with \$208,153,301 in the preceding year, and the shipments to \$253,827,367, in comparison with \$192,338,337.

The aggregate value of the products of our manufacturing industry, the number of hands employed, the value of real estate occupied, the cash capital invested, and the number of establishments engaged in Cincinnati, for each year in which statistics have been compiled touching these particulars, will be found in the following table:

Years.	Number of establishments.	Cash capital invested.	Value of real estate occupied.	Number of hands employed.	Value of production.
Total for year ending January 1, 1811.....	•	•	•	9,040	\$16,966,443
" " 1851.....	•	•	•	28,527	46,189,279
" " 1861.....	•	•	•	30,268	46,265,082
" " 1870.....	•	\$45,225,586	\$36,853,783	59,354	119,140,080
" " 1871.....	•	51,673,741	37,124,119	59,827	127,459,921

PAPER.

Both the business in paper here and the production, in the district which is tributary to this city, have been vigorously prosecuted during the past year, and have been fairly remunerative. An advance of about 15 per cent. in paper occurred in October, which was maintained until the following spring, since which there has been a decline of fully 10 per cent., so that prices at the close were not to exceed 5 per cent. above the low prices of 1879. All the mills in the Miami Valley and adjacent districts have been busily employed throughout the whole year, and the capacity of the locality has been somewhat increased. The writing paper mill at Franklin, which was being rebuilt at the time of the last report, has been completed, as has also the additional mill for the manufacture of book and news paper at the same place. A new book and news mill at Miamisburg was finished last spring, and commenced the manufacture of paper May 1, 1880. The wrapping mill at Carrollton has largely increased its capacity during the year, so that at no time has the production in this great department of our business been more marked than at the present time. The mills of this locality now turn out about all kinds of paper known to the domestic trade, reaching ledger, writing, book, news, manilla, tissue, colored, blotting, wrapping, roofing, and building papers, in all of which the quality of the product takes a front rank among such productions. The scope of our business has been materially enlarged during the year, through the instrumentality of the Southern Railway, our paper never before having been so generally distributed in the southern country as now.

The tables which are appended show an increased production in nearly the whole line of papers manufactured at the mills in the district tributary to this city. The list comprises the product of forty-one mills, which are mainly located in the Miami Valley, and exhibits an aggregate production in the late year of 55,409,106 pounds, compared with 48,336,918 pounds in the previous year, showing an increase in the general aggregate of 7,072,188 pounds. The total aggregate value of the production, in the late year, was \$3,514,100, in comparison with \$2,859,768 in 1878-79, or an increase of \$654,332. The increase has been marked in manilla, news, and roofing papers. Book papers exhibit a slight increase, while wrapping papers show a reduction in quantity. There was manufactured of book paper in the past year 11,593,232 pounds, compared with 11,467,694 in the previous year; of manilla 11,305,507, in comparison with 10,294,528, an increase of 1,010,979 pounds; of news 10,998,596 pounds, compared with 8,963,072, an increase of 2,035,524 pounds; of roofing 10,223,738 pounds, against 5,356,219,

showing a production of almost double that of the preceding year. Of wrapping there were manufactured 9,248,033 pounds, compared with 10,438,455, which would indicate a reduction of 1,190,422 pounds. To this, however, there is not much significance, for the mills manufacturing wrapping and roofing, and similar papers, can readily turn their attention from one to the other, to suit the circumstances. The joint production of these two kinds, it will be seen, exhibits a large increase, having been 19,471,771 pounds, in comparison with 15,794,674, showing an increase of 3,677,097 pounds. Of writing paper there were manufactured 2,040,000 pounds, compared with 1,817,000. To produce these results, there were 41 mills, working 1,471 hands, using a cash capital to the amount of \$1,803,057, and occupying real estate valued at \$1,963,498. The entire exhibit is a most gratifying one to this great department of our production, which, in a comparatively few years, has become one of the most influential and useful among the whole range of our distinguished industries.

The production of the mills tributary to this city, for four years, ending June 30, according to returns made to the Superintendent of the Merchants' Exchange, will be found in the table immediately following. The list embraces the mills of twenty-eight firms or companies. Complete returns have been received from nearly the whole list, and careful estimates, based on intelligent sources of information, have been made where reports have not been furnished:

The paper bags manufactured here and in the vicinity, in the past year, aggregated, approximately 122,329,000, with a value of \$209,256, compared with 119,289,000 bags and a value of \$182,261 in the preceding year. The whole number of flour sacks manufactured was, approximately 16,318,100, with a value of \$243,561, in comparison with 15,186,722 sacks, and a value of \$190,954. The whole number of both kinds manufactured for the year, was 138,647,100, with a value of \$452,817, compared with 134,475,722, and a value of \$373,815 in 1878-79.

The following table shows the average annual price, per pound, at the mills, for the various kinds of paper, for six years :

* This quotation is relatively above similar quotations for previous years, because it embraces the prices of Bessemer iron.

COAL.

The past year to the coal business of Cincinnati has been the largest on record, the receipts having exceeded those of 1878-79 13,987,579 bushels, and those of 1875-76, which were the largest in any year preceding the past one, 8,014,929 bushels. The first two months of the commercial year brought a continuation of low water in the Ohio River, making about six months in which the elements were unfavorable to liberal receipts. It was not until about the middle of November that any relief came, so that, as far as Pittsburgh coal is concerned, there was not enough afloat at Cincinnati to make a market, from early in May, 1879, until the last of November save during the month of August and the first week in September. It was a remarkably long period, and fortunate was it that mild weather, in the autumn, interfered, to save us from a fuel famine, which seemed imminent. Soon after the opening of the new commercial year, prices began to advance, and swept upward until the second week in November, when the highest prices were attained since the winter of 1872-73—Pittsburgh coal, for a brief period, selling at 28@30 cents per bushel, delivered. These prices, however, were limited to a part only of the trade, for there were those who supplied their customers at 24 cents during the highest period. The truth is, the supply was so limited that the matter of competition ceased entirely to be a factor in the business. Our citizens received new demonstration of the invaluable character of the river, alike to our commercial, industrial, and domestic interests. Our manufacturers, with extraordinary demands on them for their products, growing out of the improved times, bought at high prices from day to day. The railroads were resorted to, and they made important contributions to our daily supply, but their inability to meet the reasonable fuel wants of this great manufacturing city was never more clearly revealed. Besides the inadequate supply, freight rates by rail kept pace with our necessities, until, at last, 14@16 cents per bushel was asked for transporting Hocking Valley coal, instead of 6@8 cents, at which contracts had been made under favorable circumstances. The rise in the river, in November, brought coal here both from the Kanawha and Pittsburgh regions on the 21st of that month.

Table showing the annual receipts, at Cincinnati, of the various kinds of coal, in a period of seven years. This table has been carefully made from the reports furnished by Messrs. A. L. Baker, A. J. Cook, and D. B. Shutterly, coal gaugers at this city, and from the records of the Merchants' Exchange, private returns, etc.:

LEATHER.

The past year has been one of the most satisfactory seasons to the leather manufacturers here they have enjoyed for years. All have been working to their full capacity, and the result is probably the largest year's production the city has ever seen in this great branch of our business. This activity, too, has extended equally to sole and harness leather, both of which are produced here in large quantities, for local consumption as well as for shipment. According to the figures of Secretary Blackburn, of the Board of Trade, the aggregate production of leather, for the calendar year of 1879, was \$2,614,000. That these figures will be largely increased in the present calendar year there can be no doubt. The entire production for the year will, doubtless, much exceed \$3,000,000. The demand for local use is on the increase, as our shoe and harness manufacturers are increasing their production, which they are constantly doing. The demand, during the past year, is one of the steadiest that has been known for years. All kinds of leather have been constantly sought. This demand the tanners have generally freely met, to such an extent that in some cases stocks were short at the close of the year. Competition has been active, but there has been a living margin to the producers. Prices were somewhat higher, both hides and bark having ruled above the previous year. City-tanned oak sole-leather of the best quality, which was 30@34 cents per pound for light to heavy at the opening, advanced until the middle of July, when it was quotable at 34@39 cents, and so remained until the close of the year. The average quotation for the same, during the year, was 34.38 cents per pound, in comparison with 30.63 in 1878-79, 32.69 in 1877-78, 33.8 in 1876-77, 34.34 in 1875-76, 36.7 in 1874-75, 38.3 in 1873-74, and 40.1 in 1872-73. Hemlock sole leather underwent similar appreciation, the year closing at 24@31 cents per pound, com-

* Principally Hocking and Muskingum Valleys, Washington and Piedmont coals, not elsewhere embraced.

† Not including coal consumed for railroad purposes, which, in 1879-80, is embraced under the head of "other receipts."

pared with 19@26 at the corresponding period of the previous year. Harness was 36@40, compared with 27@32, and skirting 39@42, in comparison with 33@36. While the year has been a satisfactory one to tanners, the dealers here have also had a year of activity, the sales of the year having shown an advance over 1878-79. The receipts of leather, for the year, aggregated 41,348 bundles, compared with 36,344 bundles in the previous year, no part of which was the production of our own tanneries. The shipments have also exceeded the previous year, having been 42,240 bundles, compared with 39,965. Both receipts and shipments have exceeded any previous year.

GRAIN.

The grain business of Cincinnati exhibits an encouraging increase over the preceding year. No previous season has presented so many favorable evidences of substantial growth and increasing commercial influence in this department. Barley, corn, oats, rye and wheat, each has exhibited an increased movement, which in both corn and wheat has been marked. The aggregate receipts of all kinds of grain, for the year, were 13,697,234 bushels, compared with 11,263,275 bushels in 1878-79, 11,165,697 in 1877-78, 8,778,581 in 1876-77, 8,662,133 in 1875-76, and 7,600,432 in 1874-75. The aggregate shipments were 6,350,975 bushels, in comparison with 5,022,591 in 1878-79, 4,498,608 in 1877-78, 2,716,857 in 1876-77, 2,319,291 in 1875-76, and 1,570,759 in 1874-75. It thus appears that the aggregate receipts of the past year have increased over 1878-79 2,433,959 bushels, while the shipments have increased 1,328,384 bushels. If to the above figures were added through shipments, not embraced therein, it would show the total inward movement of all kinds of grain, at Cincinnati, to have been 21,396,846 bushels, in comparison with 18,151,595 in 1878-79, and 15,950,597 in 1877-78, an increase in 1879-80 over the previous year, of 3,245,251 bushels, while the outward movement would reach 14,050,587 bushels in 1879-80, compared with 11,910,911 in 1878-79, and 9,283,508 in 1877-78, an increase in the past year over 1878-79 of 2,139,676 bushels. To these receipts the Cincinnati Southern Railway contributed 389,730 bushels, of which 354,814 bushels were of wheat. It should be remarked, however, in this connection, that considerable quantities of wheat went southward, from points along the line of that railway, late in the year, much of which, under normal conditions of the crops in the South, would have naturally found a market here. In general, the year's work has been a favorable one. Not only do the figures show a large increase in home consumption, an increase over 1878-79 equal to 1,105,575 bushels, but they exhibit an equally encouraging increase in distribution, the shipments having swelled from 1,570,759 bushels to 6,350,975 in the past six years.

Table showing the annual movement of flour, at Cincinnati, in thirty-three years:

Years.	Receipts, bbls.	Shipments, bbls.	Years.	Receipts, bbls.	Shipments, bbls.

PORK.

The past year to the pork packers of Cincinnati, while free from disaster, has not fulfilled the expectations which were early entertained. Stimulated by the marked improvement which was manifest in nearly all departments of business, the prospects of a year of general prosperity in the country and large wants in the old world, hogs were purchased throughout the west at prices largely in excess of the preceding year. In Cincinnati the average price paid for the winter hogs was \$4.36 per 100 pounds, gross, compared with \$2.83 in 1878-79, an increase of 53 per cent. The season had scarcely reached a conclusion, before the consequences of thus largely adding to the aggregate cost of the product was manifest. There were foreign exports without a parallel, but there was also to be slaughtered during the year an enormous crop of hogs. The season, generally, save towards the close, was unsatisfactory to the packers. The closing months of the year brought a very favorable turn to affairs, but this occurred after most of the product had changed hands. It is true that the packers, generally, have come through with fair returns for the season's work, but it is traceable more to favorable pur-

chases of the product, made at periods when prices were below what the winter prices for hogs would have warranted, than to anything that was favorable about the actual packing of the year.

CINCINNATI PORK PACKING.

Table showing the details of the packing in the city of Cincinnati, for the year ending March 1, 1880, compared with 1878-79, in accordance with the report of the Superintendent of the Merchants' Exchange, submitted to the Chamber of Commerce, March 5.

WINTER PACKING (NOVEMBER 1, TO MARCH 1.)

	1879-80.	1878-79.
Whole number of hogs packed	534,559	623,584
Decrease, head	89,025	
Equivalent to hogs of the weight of 1878-79, number	526,130	
Aggregate gross weight, lbs	142,363,653	168,733,427
Decrease, lbs	26,269,774	
Average gross weight, lbs	266.31	270.58
Decrease, lbs	4.27	
Aggregate yield of lard from head, gut, leaf, and trimmings, lbs	19,344,815	22,973,879
Decrease, lbs	3,629,064	
Average yield of lard from head, gut, leaf, and trimmings, lbs	36.18	36.84
Decrease, lbs66	
Aggregate cost	\$6,207,587	\$4,790,319
Increase	1,417,268	
Average cost per 100 lbs. gross	4 36.03	2 83.89
Increase	1 52.14
